Managing Television News B. William Silcock, Don Heider, Mary T. Rogus, 2009-03-04 Managing Television News provides a practical introduction to the television news producer, one of the most significant and influential roles in a newscast. Recognizing the need for formal training in this key role, authors B. William Silcock, Don Heider, and Mary T. Rogus have combined their expertise and experience to shape this essential resource on the responsibilities, demands, and rewards of the news producer position. Their book provides a strategic approach to producing newscasts and serves as an in-depth guide to creating quality, audience-friendly newscasts working within the realistic limitations of most newsrooms. It helps the student and the professional producer sort through the various deadline-driven challenges of creating a 30-minute newscast. Filled with real-world examples and advice from news directors, producers, and anchors currently in the business, and photographs illustrating the varied perspectives in the position, Managing Television News provides critical skill sets to help resolve ethical dilemmas, as well as keen and fresh insights on how to win the ratings without compromising news quality. Career concerns are also addressed. This resource is a pioneering book for the professional television newsroom and the individual reader interested in starting or expanding a producing career. It is an excellent text for the college classroom, as its structure

fits neatly into a semester schedule, and it is a must-have resource for both seasoned and novice producers, as well as students in broadcast news.

Weather Forecasting in the United States United States. Weather Bureau, Alfred Judson Henry, Edward Hall Bowie, Henry Joseph Cox, Harry Crawford Frankenfield, 1916

American Weather Stories Patrick Hughes, 1976
Weather has shaped United States' culture, national character and folklore; at times it has changed the course of history. The seven accounts compiled in this publication highlight some of the nation's weather experiences from the hurricanes that threatened Christopher Columbus to the peculiar run of bad weather that has plagued American presidents on Inauguration Day. Also presented are meteorological phenomena encountered by people who documented weather and climate during the Revolutionary and Civil Wars and those who suffered through the year without a summer, the Blizzard of '88, and the dustbowl drought of the 1930's. Numerous historical photographs illustrate the entries. (Author/WB).

Great Plains Weather Kenneth F. Dewey, 2019-05-01
The weather of the Great Plains is extreme and highly variable, from floods to droughts, blizzards to tornadoes. In *Great Plains Weather* Kenneth F. Dewey explains what makes this region's climate unique by presenting a historical climatology of extreme weather events. Beginning with tornadoes—perhaps the most formidable plains weather phenomena—he describes the climatology of

these storms and discusses memorable tornadoes of the plains. As one of the storm chasers who travels the Great Plains in the spring and summer tracking severe weather, Dewey also shares some of his experiences on the road. Dewey then goes on to discuss famous blizzards, from the "School Children's Storm" of 1888 to more recent storms, along with droughts and floods. Precipitation, or the lack thereof, has long determined human activity in the region; exacerbated by the vagaries of climate change, it continues to have a significant economic and cultural impact on the people of the plains. Dewey's absorbing narrative is complemented by images of tornadoes, snowstorms, and flash floods that he amassed in forty years of climatological research.

Weather Maps Illustrating a Lecture on Storms and Weather Forecasts Willis Luther Moore, 1896

Wisconsin's Weather and Climate Joseph M. Moran, Edward J. Hopkins, 2002 The land that is now called Wisconsin has a place in weather history. Its climate has ranged from tropical to polar over hundreds of millions of years--and even today, that's the seeming difference between July and January here. And Wisconsinites have played key roles in advancing the science of meteorology and climatology: Increase Lapham helped found the National Weather Service in the nineteenth century; Eric Miller was the first to broadcast regular weather reports on the radio in the 1920s; Verner Suomi pioneered tracking weather by satellite; and Reid Bryson has been a leader in studying global climate change. *Wisconsin's Weather and Climate* is written for weather buffs, teachers, students, outdoor enthusiasts, and those working in fields, lakes, and forests for whom the weather is a daily force to be reckoned with. It examines the physical features of Wisconsin that shape the state's climate--topography, mid-latitude location, and proximity to Lakes Superior and Michigan--and meteorological phenomena that affect climate, such as atmospheric circulation and air mass frequency. Authors Joseph M. Moran and Edward J. Hopkins trace the evolution of methods of weather observation and forecasting that are so important for agriculture and Great Lakes commerce, and they explain how Wisconsin scientists use weather balloons, radar, and satellites to improve forecasting and track climate changes. They take readers through the seasonal changes in weather in Wisconsin and give an overview of what past climate changes might

tell us about the future. Appendices provide climatic data for Wisconsin, including extremes of temperature, snowfall, and precipitation at selected stations in the state. The authors also list sources for further information. Vignettes throughout the book provide fascinating weather lore: o Why there are cacti in Wisconsin o The famous Green Bay Packers-Dallas Cowboys Ice Bowl game of 1967 o The Army Signal Corps' ban on the word tornado o Advances in snow-making technology o The decline of the Great Lakes ice industry
