Netspaces Katharine S. Willis,2017-05-15 The focus of this book is on understanding and explaining the way that our increasingly networked world impacts on the legibility of cities; that is how we experience and inhabit urban space. It reflects on the nature of the spatial effects of the networked and mediated world; from mobile phones and satnavs to data centres and wifi nodes and discusses how these change the very nature of urban space. It proposes that netspaces are the spaces that emerge at the interchange between the built world and the space of the network. It aims to be a timely volume for both architectural, urban design and media practitioners in understanding and working with the fundamental changes in built space due to the ubiquity of networks and media. This book argues that there needs to be a much better understanding of how networks affect the way we inhabit urban space. The volume defines five characteristics of netspaces and defines in detail the way that the spatial form of the city is affected by changing practices of networked world. It draws on theoretical approaches and contextualises the discussion with empirical case studies to illustrate the changes taking place in urban space. This readable and engaging text will be a valuable resource for architects, urban designers, planners and sociologists for understanding how of networks and media are creating significant changes to urban space and the resulting implications for the design of cities.

Digital and Smart Cities Katharine S. Willis,Alessandro Aurigi,2017-10-12 Digital and Smart Cities

presents an overview of how technologies shape our cities. There is a growing awareness in the fields of design and architecture of the need to address the way that technology affects the urban condition. This book aims to give an informative and definitive overview of the topic of digital and smart cities. It explores the topic from a range of different perspectives, both theoretical and historical, and through a range of case studies of digital cities around the world. The approach taken by the authors is to view the city as a socially constructed set of activities, practices and organisations. This enables the discussion to open up a more holistic and citizen- centred understanding of how technology shapes urban change through the way it is imagined, used, implemented and developed in a societal context. By drawing together a range of currently quite disparate discussions, the aim is to enable the reader to take their own critical position within the topic. The book starts out with definitions and sets out the various interpretations and aspects of what constitutes and defines digital cities. The text then investigates and considers the range of factors that shape the characteristics of digital cities and draws together different disciplinary perspectives into a coherent discussion. The consideration of the different dimensions of the digital city is backed up with a series of relevant case studies of global city contexts in order to frame the discussion with real world examples.
