Mining Massive Data Sets for Security Françoise Fogelman-Soulié, 2008 The real power for security applications will come from the synergy of academic and commercial research focusing on the specific issue of security. This book is suitable for those interested in understanding the techniques for handling very large data sets and how to apply them in conjunction for solving security issues.

Framing the Net Rikke Frank Jorgensen, 2013-08-01 Rikke Frank Jrgensen has given us a thoughtful and competent contribution to a debate of increasing global importance. Her theoretical analysis and practical case-study stimulate critical reflection on how we should connect the primary moral domain of our time human rights with the primary infrastructure for global communication, the Internet. This book is a must read for all who engage with the search for meaningful and practical normative directions for communications in the 21st century. Cees J. Hamelink, University of Amsterdam, The Netherlands Understanding the Internet is key to protecting human rights in the future. In *Framing the Net*, Rikke Frank Jrgensen shows how this can be done. Deconstructing four key metaphors the Internet as infrastructure, public sphere, medium and culture she shows where the challenges to human rights protection online lie and how to confront them. Importantly, she develops clear policy proposals for national and international Internet policy-makers, all based on human rights. Her book is essential reading for anyone interested in the future of human rights on

the Internet: and that should be everyone. Wolfgang Benedek, University of Graz, Austria

Jrgensens examination of whether Internet governance can be better aligned with the rights and freedoms enshrined in human rights law and standards of compliance should be read by everyone in the academic, policy and legal practitioner communities. From womens use of ICTs in Uganda to Wikipedia in Germany, information society developments make it imperative that scholars and practitioners understand why it matters how the issues are framed. This book successfully analyses a decade or more of debate in this field in an engaging and very illuminating way. Robin Mansell, London School of Economics and Political Science, UK

This important book examines how human rights are being applied in the digital era. The focus on internet freedoms and internet rights has risen considerably in recent years, and in July 2012 the first resolution on the promotion, protection and enjoyment of human rights on the internet was adopted by the U.N. Human Rights Council. This timely book suggests four framings to examine human rights challenges in an internet era: the Internet as Infrastructure, the Internet as Public Sphere, the Internet as Medium and the Internet as Culture. These propositions, and the questions that arise from them, are considered in the broad context of the way human rights are translated and applied in the information society, both in academic research and the international communitys policy discourse. The author points to the role of private actors vis-[^]-vis human rights as one of the most crucial and cross-cutting themes that

needs to be addressed in order to advance human rights protection on the internet. Combining research themes that are often dealt with separately, this book will appeal to civil society organizations, journalists, and policy makers in the field of internet and communication policy making. The books overview of internet-related academic discourse combined with human rights-based policy analysis will be useful for scholars, students, and practitioners working within these fields.

and learning platforms and advising systems.

Global Knowledge Dynamics and Social Technology

Thomas Petzold, 2017-05-31 This volume unpacks an intriguing challenge for the field of media research: combining media research with the study of complex networks. Bringing together research on the small-world idea and digital culture it questions the assumption that we are separated from any other person on the planet by just a few steps, and that this distance decreases within digital social networks. The book argues that the role of languages is decisive to understand how people connect, and it looks at the consequences this has on the ways knowledge spreads digitally. This volume offers a first conceptual venue to analyse emerging phenomena at the innovative intersection of media and complex network research.

Storage Systems Alexander Thomasian, 2021-10-13

Storage Systems: Organization, Performance, Coding, Reliability and Their Data Processing was motivated by the 1988 Redundant Array of Inexpensive/Independent Disks proposal to replace large form factor mainframe disks with an array of commodity disks. Disk loads are balanced by striping data into strips—with one strip per disk—and storage reliability is enhanced via replication or erasure coding, which at best dedicates k strips per stripe to tolerate k disk failures. Flash memories have resulted in a paradigm shift with Solid State Drives (SSDs) replacing Hard Disk Drives (HDDs) for high performance applications. RAID and Flash have resulted in the emergence of new storage

companies, namely EMC, NetApp, SanDisk, and Purestorage, and a multibillion-dollar storage market. Key new conferences and publications are reviewed in this book. The goal of the book is to expose students, researchers, and IT professionals to the more important developments in storage systems, while covering the evolution of storage technologies, traditional and novel databases, and novel sources of data. We describe several prototypes: FAWN at CMU, RAMCloud at Stanford, and Lightstore at MIT; Oracle's Exadata, AWS' Aurora, Alibaba's PolarDB, Fungible Data Center; and author's paper designs for cloud storage, namely heterogeneous disk arrays and hierarchical RAID. Surveys storage technologies and lists sources of data: measurements, text, audio, images, and video. Familiarizes with paradigms to improve performance: caching, prefetching, log-structured file systems, and merge-trees (LSMs). Describes RAID organizations and analyzes their performance and reliability. Conserves storage via data compression, deduplication, compaction, and secures data via encryption. Specifies implications of storage technologies on performance and power consumption. Exemplifies database parallelism for big data, analytics, deep learning via multicore CPUs, GPUs, FPGAs, and ASICs, e.g., Google's Tensor Processing Units.

Coding Democracy Maureen Webb, 2021-07-27 Hackers as vital disruptors, inspiring a new wave of activism in which ordinary citizens take back democracy. Hackers have a bad reputation, as shady deployers of bots and destroyers of infrastructure. In Coding Democracy, Maureen Webb

offers another view. Hackers, she argues, can be vital disruptors. Hacking is becoming a practice, an ethos, and a metaphor for a new wave of activism in which ordinary citizens are inventing new forms of distributed, decentralized democracy for a digital era. Confronted with concentrations of power, mass surveillance, and authoritarianism enabled by new technology, the hacking movement is trying to build out democracy into cyberspace.

Scenarios and Information Design Mary Rice-Lively, Hsin-Liang Chen, 2006-03-31 Developers of digital media require new skills in information design. Information designers developing web sites, software or online system interfaces, games and other digital media often overlook critical steps to ensure the usability of their product. *Scenarios and Information Design* introduces readers to both the theory and practice of the use of scenarios to create usable information spaces. Through practical applications, such as step-by-step guidelines for scenario development and case studies with analysis tools, the book outlines crucial steps to develop user and use scenarios to achieve competencies for and tools to implement prescribed tasks for user-oriented information design. Provides practical applications for theoretical concepts Illustrates concepts with case studies Reinforces content with end of chapter exercises

Big Data Min Chen, Shiwen Mao, Yin Zhang, Victor C.M. Leung, 2014-05-05 This Springer Brief provides a comprehensive overview of the background and recent developments of big data. The value chain of big data is divided into four phases: data

generation, data acquisition, data storage and data analysis. For each phase, the book introduces the general background, discusses technical challenges and reviews the latest advances. Technologies under discussion include cloud computing, Internet of Things, data centers, Hadoop and more. The authors also explore several representative applications of big data such as enterprise management, online social networks, healthcare and medical applications, collective intelligence and smart grids. This book concludes with a thoughtful discussion of possible research directions and development trends in the field. *Big Data: Related Technologies, Challenges and Future Prospects* is a concise yet thorough examination of this exciting area. It is designed for researchers and professionals interested in big data or related research. Advanced-level students in computer science and electrical engineering will also find this book useful.

Computer-Mediated Communication Caleb T. Carr, 2021-04-29 Caleb T. Carr introduces students to fundamental concepts, theories, and applications of computer-mediated communication. Building on CF0, SIP, SIDE, and hyperpersonal CMC theories, this engaging text gives students a framework for human communication across all existing and future digital channels.

IT STRATEGY AND MANAGEMENT, FOURTH EDITION DUBEY, SANJIVA SHANKAR, 2018-08-01 Businesses are becoming increasingly global, so they need a well-orchestrated IT management strategy to meet the increasing customer expectations and international competition. This concise yet comprehensive

Alphabet to Internet Irving Fang, 2014-11-13 What Greek philosopher thought writing would harm a student's memory? Was the poet Byron's daughter the first computer programmer? Who plays more video games, women over 18 or teenage boys? In *Alphabet to Internet: Media in Our Lives*, Irving Fang looks at each medium of communication through the centuries, asking not only, What happened? but also, How did society change because of this new communication medium? and, How are we different as a result? Examining the impact of different media

on a broad, historical scale—among them mass printing, the telegraph, film, the internet, and advertising—Alphabet to Internet takes us from the first scratches of writing and the origins of mail to today's video games, the widespread and daily use of smartphones, and the impact of social media in political uprisings across the globe. A timeline at the end of each chapter places events in perspective and allows students to pinpoint key moments in media history. Now in its third edition, Alphabet to Internet presents a lively, thoughtful, and accessible introduction to media history.

Application of Big Data, Blockchain, and Internet of Things for Education Informatization
Mian Ahmad Jan, Fazlullah Khan, 2023-01-11 The three-volume set LNICST 465, 466 and 467 constitutes the proceedings of the Second EAI International Conference on Application of Big Data, Blockchain, and Internet of Things for Education Informatization, BigIoT-EDU 2022, held as virtual event, in July 29–31, 2022. The 204 papers presented in the proceedings were carefully reviewed and selected from 550 submissions.

BigIoT-EDU aims to provide international cooperation and exchange platform for big data and information education experts, scholars and enterprise developers to share research results, discuss existing problems and challenges, and explore cutting-edge science and technology. The conference focuses on research fields such as "Big Data" and "Information Education. The use of Artificial Intelligence (AI), Blockchain and network security lies at the heart of this conference as we focused on these emerging technologies to excel the progress of Big Data and information education.

The Future of the Internet Jonathan Zittrain, 2009-05-28 In *The Future of the Internet: And How to Stop It* Jonathan Zittrain explores the dangers the internet faces if it fails to balance ever more tightly controlled technologies with the flow of innovation that has generated so much progress in the field of technology. Zittrain argues that today's technological market is dominated by two contrasting business models: the generative and the non-generative. The generative models - the PCs, Windows and Macs of this world - allow third parties to build upon and share through them. The non-generative model is more restricted; appliances such as the xbox, iPod and tomtom might work well, but the only entity that can change the way they operate is the vendor. If we want the internet to survive we need to change. People must wake up to the risk or we could lose everything.

Human Centered Design Masaaki Kurosu, 2011-06-24 This volume constitutes the refereed proceedings

of the Second International Conference on Human Centered Design, HCD 2011, held as Part of HCI International 2011, in Orlando, FL, USA, in July 2011, jointly with 9 other thematically similar conferences. The 66 revised papers presented were carefully reviewed and selected from numerous submissions. The papers are organized in topical parts on human centered design methods and tools, mobile and ubiquitous interaction, human centered design in health and rehabilitation, human centered design in work, business and education, and applications of human centered design.

Improving Inclusivity in Higher Education Bhakti More, Seena Biju, Vinod Pallath, 2023-11-06 This book addresses issues of access that COVID-19 brought forth in higher education, with a primary focus on Asian countries. In looking to address SDG4 to promote “inclusive and equitable quality education for all”, the volume explores the challenges relating to educational exclusion by considering how specially-abled students have been impacted by the digital divide in the context of the pandemic. It puts a spotlight on the approaches, experiences, and case analyses from various geographies in the region to study transitions in inclusivity. Universities and institutes of higher education have had to reconsider their digital offerings and services all the more since the onset of the pandemic, but have, in many instances, failed to fully account for how Internet access can be limited, unavailable, or unaffordable for many students. As a result, specially-abled learners – students without sufficient technological resources, such as those

living in remote areas where there are little or no Internet facilities – have been, however unintentionally, neglected. While universities implemented their own practices, processes and policies to reach, and teach, disadvantaged learners, they had to further adapt these strategies, re-aligning them to meet the unprecedented circumstances, and concomitant needs, of specially-abled learners – and there is still much more to do. This book consolidates regional perspectives on how to work towards goals of inclusivity, and bridge the digital divide, looking into, and beyond, the conditions of the pandemic. Relevant to scholars and policymakers, this book is of interest to those focused on digitisation and the transition to the ‘new normal’ in higher education.

Offline Imran Rashid, Soren Kenner, 2018-12-28
Authors Imran Rashid and Soren Kenner have sparked an international debate by revealing the “mind hacks” Facebook, Apple, Google, and Instagram use to get you and your children hooked on their products. In *Offline*, they deliver an eye-opening research-based journey into the world of tech giants, smartphones, social engineering, and subconscious manipulation. This provocative work shows you how digital devices change individuals and communities for better and worse. A must-read if you or your kids use smartphones or tablets and spend time browsing social networks, playing online games or even just browsing sites with news and entertainment. Learn how to recognize ‘mind hacks’ and avoid the potentially disastrous side-effects of digital pollution. Unplug from the

matrix. Learn digital habits that work for you.

Book of Extremes Ted G. Lewis, 2014-05-10 What makes the 21st century different from the 20th century? This century is the century of extremes - political, economic, social, and global black-swan events happening with increasing frequency and severity. Book of Extremes is a tour of the current reality as seen through the lens of complexity theory – the only theory capable of explaining why the Arab Spring happened and why it will happen again; why social networks in the virtual world behave like flashmobs in the physical world; why financial bubbles blow up in our faces and will grow and burst again; why the rich get richer and will continue to get richer regardless of governmental policies; why the future of economic wealth and national power lies in comparative advantage and global trade; why natural disasters will continue to get bigger and happen more frequently; and why the Internet – invented by the US -- is headed for a global monopoly controlled by a non-US corporation. It is also about the extreme innovations and heroic innovators yet to be discovered and recognized over the next 100 years. Complexity theory combines the predictable with the unpredictable. It assumes a nonlinear world of long-tailed distributions instead of the classical linear world of normal distributions. In the complex 21st century, almost nothing is linear or normal. Instead, the world is highly connected, conditional, nonlinear, fractal, and punctuated. Life in the 21st century is a long-tailed random walk – Levy walks -- through extreme events of unprecedented impact. It is an

exciting time to be alive.
