The Secret of Coaching and Leading by Values Simon L. Dolan, 2020-06-07 Coaches play a major role in helping people understand their values and the values of their surroundings and helping them make choices and adapt. Sometimes the choice may be to find a situation more in sync with your values. Or it may mean working hard on yourself or in concert with your partner, team, or organization. Whatever we need to do to attain it, a positive fit makes for a happier person, and a happier person will be more successful. This accessible and practical book will help coaches, educators, leaders, and managers understand the philosophy, methodology, and tools that can be used to make a person happier, healthier, and more productive at work and in life in general. This book compiles short vignettes from over a dozen global academics and celebrated executive coaches, sharing information about aligning values in different settings. Based on years of research and written for readers from all walks of life, you will learn that when you understand your core values, place them on a triaxial template, and align them with your definition of success, everything changes. It will help you come out of your comfort zone in order to embrace the future and enhance the quality of your life. For this, you need a concept, a methodology, and effective tools, all of which are offered in this book. Rich with practical step-by-step methodologies and tools to facilitate values-led leadership, coaching, and mentoring, this book is essential for any change agent, be it a coach, a leader, an educator, or any person who is interested in learning how to become more effective, improve their practice, and engage in self or professional coaching. At the same time, it will enhance leadership qualities.

Intrusion Detection in Distributed Systems Peng Ning, Sushil Jajodia, Xiaoyang Sean Wang, 2012-12-06 Intrusion Detection In Distributed Systems: An Abstraction-Based Approach presents research contributions in three areas with respect to intrusion detection in distributed systems. The first contribution is an abstraction-based approach to addressing heterogeneity and autonomy of distributed environments. The second contribution is a formal framework for modeling requests among cooperative IDSs and its application to Common Intrusion Detection Framework (CIDF). The third contribution is a novel approach to coordinating different IDSs for distributed event correlation.

The Weight of Whiteness Alison Bailey, 2021-02-23 “Check your privilege” is not a request for a simple favor. It asks white people to consider the painful dimensions of what they have been socialized to ignore. Alison Bailey’s *The Weight of Whiteness: A Feminist Engagement with Privilege, Race, and Ignorance* examines how whiteness misshapes our humanity, measuring the weight of whiteness in terms of its costs and losses to collective humanity. People of color feel the weight of whiteness daily. The resistant habits of whiteness and its attendant privileges, however, make it difficult for white people to feel the damage. White people are more comfortable thinking about white supremacy in terms of what privilege does for them, rather than feeling what it does to them. The first half of the book focuses on the overexposed side of white privilege, the side that works to make the invisible and intangible structures of power more visible and tangible. Bailey discusses the importance of understanding privileges intersectionally, the ignorance-preserving habits of “white talk,” and how privilege and ignorance circulate in educational settings. The second part invites white readers to explore the underexposed side of white dominance, the weightless side that they would rather not feel. The final chapters are powerfully autobiographical. Bailey engages readers with a deeply personal account of what it means to hold space with the painful weight of whiteness in her own life. She also offers a moving account of medicinal genealogies, which helps to engage the weight she inherits from her settler colonial ancestors. The book illustrates how the gravitational pull of white ignorance and comfort are stronger than the clean pain required for collective liberation. The stakes are high: Failure to hold the weight of whiteness ensures that white people will continue to blow the weight of historical trauma through communities of color.

Values, Nature, and Culture in the American Corporation William C. Frederick, 1995 In Values, Nature, and Culture in the American Corporation, distinguished ethicist William Frederick explores issues of fundamental importance to all who aspire to conduct their business affairs ethically. He begins with an examination of the three value systems in business that are basically incompatible, and therefore in constant tension. The first is the need for managers to efficiently allocate resources for maximum profits. The second is the natural tendency for managers, in pursuit of the first goal, to accumulate power for its own sake. The third is the desire for people in the community to create relationships that will perpetuate these communities. Frederick brings in a range of ideas and concepts from the social sciences as well as the natural sciences to illuminate his discussion. In the final section of the book he explores a range of issues of current concern to managers, including corporate culture and technology.

A Computational Model of First Language Acquisition Nobuo Satake, 1990 This book describes a study on the question of what sort of innate knowledge it is that enables children to acquire a first language. The author, using a computational approach, builds a model, named BUD (Bring Up a Daughter), on the basis of the data linguists and psychologists have collected. BUD is based on the empiricists' view of first language acquisition (as

opposed to that of the nativists'), that children make a number of rules in acquiring a first language and that over generalizations can be found in the acquisition of every aspect of a language. Thus, BUD has no built-in procedure by which it computes the structures of a language. A detailed description of the BUD model and its workings answers the question on which the study is based.

Genuine Pretending Hans-Georg Moeller, Paul J. D'Ambrosio, 2017-10-17 Genuine Pretending is an innovative and comprehensive new reading of the Zhuangzi that highlights the critical and therapeutic functions of satire and humor. Hans-Georg Moeller and Paul J. D'Ambrosio show how this Daoist classic, contrary to contemporary philosophical readings, distances itself from the pursuit of authenticity and subverts the dominant Confucianism of its time through satirical allegories and ironical reflections. With humor and parody, the Zhuangzi exposes the Confucian demand to commit to socially constructed norms as pretense and hypocrisy. The Confucian pursuit of sincerity establishes exemplary models that one is supposed to emulate. In contrast, the Zhuangzi parodies such venerated representations of wisdom and deconstructs the very notion of sagehood. Instead, it urges a playful, skillful, and unattached engagement with socially mandated duties and obligations. The Zhuangzi expounds the Daoist art of what Moeller and D'Ambrosio call "genuine pretending": the paradoxical skill of not only surviving but thriving by enacting social roles without being tricked into submitting to them or letting them define one's identity. A provocative rereading of a Chinese philosophical classic, Genuine Pretending also suggests the value of a Daoist outlook today as a way of seeking existential sanity in an age of mass media's paradoxical quest for originality.
