Undertow of a Trade-wind Surf. [by] Geo. H. Clark

The Living Earth Book of Wind & Weather Carl A. Posey, 1994 RD Books has posted mediocre to bad financials lately. This book cannot be the cause, but promises the solution. Lucid text non-affensively explains meteorology to the lay reader. Embellished by splendid color photos reminiscent of National Geographic quality, and by period bandw photos, and lucid drawings. A coffee-table book of substance that will stir active minds, young and old, to further study-- which would have been expedited by a bibliography. Prevailing Trade Winds Marie Sanderson, 1994-02-01 The Hawaiian Islands are small in area, but they resemble continents in miniature with climates ranging from tropical rainforest to desert to tundra. *Prevailing Trade Winds: Weather and Climate in Hawaii*, intended for students of geography, biology, ecology, and hydrology, for visitors interested in the natural phenomena of the places they visit, and for island residents, explains in clear language the many aspects of the climate and weather of Hawaii. Weather is usually defined as the current state of the atmosphere, while climate denotes average weather and includes the variability and frequency of the factors that produce weather. The authors of this volume discuss the factors that control climate; the radiation, energy, and water balances; the impact of climate on human activity;

the climate-related meanings of many place names in Hawaii; and the importance of the climate of Hawaii for scientific research. Contributors: Paul Ekern, Tom Giambelluca, Dennis Nullet, Saul Price, Marie Sanderson, and Thomas Schroeder.

Windswept Marq de Villiers, 2007-06-12 Examines the dramatic impact on Earth of the wind, describing how it controls the weather and planet environment, shaped the landscape, and transformed human civilization, and explores humankind's long struggle to understand and control wind and weather. Reprint.

Little Kids First Big Book of Weather Karen De Seve,2017 A fact-filled introduction to the wild and wonderful world of weather. You'll discover how a rainbow forms; learn why some places are hot and others cold; and even play some games!

Tying Down the Wind Eric Pinder,2000-09-04 Where can you find the worst weather on earth? The surprising answer in *Tying Down the Wind* is: everywhere! You don't need to climb Mount Everest or voyage to the icy desert of Antarctica to witness both the beauty and the destructiveness of weather. The same forces are at work in your own backyard. *Tying Down the Wind* takes readers on a voyage of discovery through the atmosphere, a swirling ocean of air that surrounds and sustains life. The journey begins in a sunny New England woodlot and ends atop the polar ice of Antarctica—where we learn, remarkably, that the two extremes are not so different. What triggers changes in the weather? How are tornadoes, thunderstorms, heat waves, and blizzards all related? *Tying Down the Wind* supplies the answers, and invites you to experience the excitement of the world's worst weather in the comfort of your own home...or car. Drawing on the author's experiences at the Mount Washington Observatory in New Hampshire's White Mountains, *Tying Down the Wind* revisits the devastating Northeast Ice Storm of 1998, takes readers on a snow-blind walk

through a Berkshire blizzard, and describes the impact of a 54,000- degree lightning bolt just a few yards away.

Annotated Atlas of Coastal and Marine Winds
Nazla Bushra, Robert V. Rohli, 2021-01-20 Annotated Atlas of Coastal and Marine Winds provides a quick-reference on major, prevailing near-surface wind systems, along with concise explanations of the features that cause these winds and a quick qualitative assessment. As accessibility to the most recent and complete atmospheric datasets is often limited, either because they are subscription-based or because they are available only in netCDF format, this book alleviates roadblocks by providing the major, prevailing near-surface wind systems, concise explanations, the features that cause these winds, and a qualitative assessment on the amount of moisture that such winds typically carry to coastal and marine scientists and engineers. This book will be an ideal resource on coastal and marine winds for a variety of professionals, including coastal scientists, marine scientists, and engineers who study phenomena that are affected directly by weather and climate. Presents a simple summary of the atmospheric process in text blocks, alongside each map Provides a quick reference on prevailing global and regional wind patterns and moisture

transport for understanding pollution patterns, prevailing storm tracks, climatology deviations, meteorology, and atmosphere-ocean relationships Includes easy-to-access summary information about prevailing wind directions, sea level pressure, and water vapor flux, all in one place

Societal Geo-innovation Arnold Bregt,Tapani Sarjakoski,Ron van Lammeren,Frans Rip,2017-04-03
This book contains the full research papers presented at the 20th AGILE Conference on Geographic Information Science, held in 2017 at Wageningen University & Research in Wageningen, the Netherlands. The selected contributions show trends in the domain of geographic information science directed to spatio-temporal perception and spatio-temporal analysis. For that reason the book is also of interest to professionals and researchers in fields outside geographic information science, in which the application of geoinformation could be instrumental in sparking societal innovation.
