International Financial Statistics, January 2019 International Monetary Fund. Statistics Dept.,2019-01-04 This January 2019 monthly issue of International Financial Statistics (IFS) contains country tables for most IMF members, as well as for Anguilla, Aruba, the Central African Economic and Monetary Community, Curaçao, the currency union of Curaçao and Sint Maarten, the Eastern Caribbean Currency Union, the euro area, Montserrat, the former Netherlands Antilles, Sint Maarten, the West African Economic Monetary Union, West Bank and Gaza, and some non-sovereign territorial entities for which statistics are provided internationally on a separate basis. Exchange rates in IFS are classified into three broad categories, reflecting the role of the authorities in determining the rates and/or the multiplicity of the exchange rates in a country. The three categories are the market rate, describing an exchange rate determined largely by market forces; the official rate, describing an exchange rate determined by the authorities—sometimes in a flexible manner; and the principal, secondary, or tertiary rate, for countries maintaining multiple exchange arrangements.

Polymeric Nanomedicines Marcel Popa,Constantin V. Uglea,2013-05-29 Over the last few decades, numerous nanoparticle platforms have been studied for their use in therapeutic applications. This book deals with the description of the construction of technical systems that combines different functionalities which bring liposomes, polymer-drug conjugates, polymer-protein conjugates, dendrimers, polymeric micelles, polymerosomes and other nanoparticles into the realm of nanotechnology proper, as opposed to traditional pharmacology or supramolecular chemistry. The volume additionally covers topics such as passive and active targeting, the strategies used for drug targeting, and the synthesis and characterization of polymeric nanoparticle platforms. Targeted polymeric nanomedicines have shown exciting results in preclinical studies, demonstrating their potential as therapeutic carriers. Therefore, the development of polymeric nanomedicines as therapeutic agents has generated great enthusiasm both in academia and industry. The book is systematically divided into chapters devoted to a class of polymeric nanomedicines. Each chapter also describes relevant aspects relating to drug design and targeting of polymeric nanomedicines wherever possible. In addition, a series of chapters concerning the contribution of polymeric nanomedicines in the treatment of several categories of diseases including cancer, inflammatory, renal, immunological diseases, and brain disorders is also presented. Key features of this book include: - A comprehensive and cutting-edge overview of polymeric nanomedicines available in a single dedicated volume - Discussions on advances in drug delivery systems for a variety of diseases - more than 2000 references, tables, equations, and drawings Readers, whether beginners or experts, will find in this book, contemporary and relevant information regarding the synthesis, evaluation and applications of polymeric nanomedicines. Supplemented with extensive bibliographic references, tables and figures, this book is an essential and incomparable reference for medicinal chemists, biologists, and medical (oncologic) researchers, as well as for scientists, undergraduate and graduate students in the field of medical bioengineering and polymer nanoscience.
