**101 Tips for Parents of Kids with Diabetes** Jeff Hitchcock, 2016-08-16 Approximately 208,000 Americans under age twenty have diagnosed diabetes, and the number is growing at an alarming rate. From 2001 to 2009, the number of American children diagnosed with type 1 diabetes rose 23 percent; for type 2 diabetes it rose 21 percent. While scientists and government organizations assess the reasons for the increase, parents are left to deal with its day-to-day ramifications, and to guide their children through the discovery and treatment process. Jeff Hitchcock, the editor of this volume, was in desperate need of advice for how to best support his young daughter after her diagnosis. When he searched for support, he was shocked by how little information existed. So he started his own support group, Children with Diabetes. And now, more than twenty years later, Children with Diabetes has answered more than twenty thousand questions from other parents, gets more than twenty thousand daily hits on its website, and has a highly respected Diabetes Team, a wealth of on-call experts for parents in need of support. In this volume, Jeff has collected a whopping 101 tips for parents. The tips answer questions such as: What does the diagnosis mean? How do I get help? Should I change my child's eating habits? What does insulin mean, and how is it used? And what should I tell my child's teacher? For ease of reference, they're categorized, so answers can quickly and easily be found. They're also provided in simple, jargon-free, and easy-to-understand language.

*The Internet and Telecommunications Policy* Gerald W. Brock, Gregory L. Rosston, 2020-08-26 This book is based on the Telecommunications Policy Research Conference which reports on research into telecommunications policy issues. While the conference is now a respectable 23 years old, this is only the second printed edition of selected papers. A new law, the Telecommunications Act of 1996, accelerated the process of integration in the communication industry and made major revisions to the Communications Act of 1934 that increase the incentive for integration within the industry. Although the papers in this volume were written prior to the passage of the new law, their importance is merely enhanced by it. They deal with fundamental, complex policy problems that arise when previously separate segments of the telecommunications industry are integrated, rather than specific regulatory rules that are likely to be changed under the new law. With the passage of this law, the timeframe for developing appropriate policies for an integrated industry has been shortened. Changes expected to occur over a period of

several years will now likely occur much more rapidly. These papers provide insights to help guide the transition in the industry. Divided into five parts, this volume: \* deals with problems of transforming local exchange telephone service from a monopoly in each geographical area to an interconnected competitive network of networks, \* considers the pricing problems that arise in an integrated network carrying traffic of different types across multiple service providers, \* examines the problem of achieving interoperability in complex networks, \* considers issues of intellectual property that arise in expected integrated networks of the future, and \* discusses electronic publication of scholarly journals, copyright protection, and the applicability of copyright law in the digital age.
