**Mathematics Learning in Early Childhood** National Research Council,Division of Behavioral and Social Sciences and Education,Center for Education,Committee on Early Childhood Mathematics,2009-11-13 Early childhood mathematics is vitally important for young children's present and future educational success. Research demonstrates that virtually all young children have the capability to learn and become competent in mathematics. Furthermore, young children enjoy their early informal experiences with mathematics. Unfortunately, many children's potential in mathematics is not fully realized, especially those children who are economically disadvantaged. This is due, in part, to a lack of opportunities to learn mathematics in early childhood settings or through everyday experiences in the home and in their communities. Improvements in early childhood mathematics education can provide young children with the foundation for school success. Relying on a comprehensive review of the research, *Mathematics Learning in Early Childhood* lays out the critical areas that should be the focus of young children's early mathematics education, explores the extent to which they are currently being incorporated in early childhood settings, and identifies the changes needed to improve the quality of mathematics experiences for young children. This book serves as a call to action to improve the state of early childhood mathematics. It will be especially useful for policy makers and practitioners-those who work directly with children and their families in shaping the policies that affect the education of young children.

*"Wordplay" in Ancient Near Eastern Texts* Scott B. Noegel,2021-07-02 This book from Scott B. Noegel offers a comparative, in-depth study of wordplay in ancient Near Eastern texts. Noegel establishes comprehensive taxonomies for the many kinds of devices that scholars label as wordplay and for their proposed functions. The consistent terminology proposed offers students and scholars of Sumerian, Akkadian, Egyptian, Ugaritic, Hebrew, and Aramaic a useful template for documenting and understanding the devices they discover and for comparing them across languages for a rich interdisciplinary dialogue.
