Airport Economics in Latin America and the Caribbean Tomás Serebrisky,2011-12-05 Traditionally, air transport infrastructure in Latin America and the Caribbean (LAC) was exclusively under government ownership and management. Starting in the late 1990s, several Latin American countries implemented innovative public-private partnerships (PPP) that transferred the financing and management of air transport sector infrastructure to the private sector. This book presents the findings of a first-ever, comprehensive study of how LAC region airports have evolved during this notable period of transition in airport ownership. It is an unbiased, positive analysis of what happened, rather than a normative analysis of what should be done to reform the airport sector or to attract private participation. It takes the first step in response to the need for more conclusive information about the influence of airport ownership on economic performance. The book is centered around the study of three dimensions of performance: productive efficiency, institutional set up for the governance of the sector, and financing of airport PPPs. Using rigorous analytical tools, this book answer a series of key questions to evaluate the introduction of private sector participation in the Latin American airport sector: Are LAC airports technically efficient? How has efficiency evolved in the last decade? Are privately-run airports more efficient than state-operated airports? How do independent regulators compare with government agencies in accountability, transparency, and autonomy? How has the level and structure of aeronautical tariffs changed in recent years? The main audience of this book are air transport practitioners, transport regulators, decisionmakers in transport ministries, and PPP units and academics.

Addressing Uncertainty about Future Airport Activity Levels in Airport Decision Making Ian S. Kincaid, 2012 This report provides a guidebook on how to develop air traffic forecasts in the face of a broad range of uncertainties. It is targeted at airport operators, planners, designers, and other stakeholders involved in planning, managing, and financing of airports, and it provides a systems analysis methodology that augments standard master planning and strategic planning approaches. This methodology includes a set of tools for improving the understanding and application of risk and uncertainty in air traffic forecasts as well as for increasing overall effectiveness of airport planning and decision making. In developing the guidebook, the research team studied existing methods used in traditional master planning as well as methods that directly address risk and uncertainty, and based on that fundamental research, they created a straightforward and transparent systems analysis methodology for expanding and improving traditional planning practices, applicable through a wide range of airport sizes. The methods presented were tested through a series of case study applications that also helped to identify additional opportunities for future research and long-term enhancements.

Airport Competition Peter Forsyth, David Gillen, Jurgen Muller, Hans-Martin Niemeier, 2016-03-23 The break-up of BAA and the blocked takeover of Bratislava airport by the competing Vienna airport have brought the issue of airport competition to the top of the agenda for air transport policy in Europe. Airport Competition reviews the current state of the debate and asks whether airport competition is strong enough to effectively limit market power. It provides evidence on how travellers chose an airport, thereby altering its competitive position, and on how airports compete in different regions and markets. The book also discusses the main policy implications of mergers and subsidies.

The Globalization Myth Shannon K. O'Neil,2022-10-18 A case for why regionalization, not globalization, has been the biggest economic trend of the past forty years The conventional wisdom about globalization is wrong. Over the past forty years as companies, money, ideas, and people went abroad more often than not, they looked regional rather than globally. O'Neil details this transformation and the rise of three major regional hubs in Asia, Europe, and North America. Current technological, demographic, and geopolitical trends look only to deepen these regional ties. O'Neil argues that this has urgent implications for the United States. Regionalization has enhanced economic competitiveness and prosperity in Europe and Asia. It could do the same for the United States, if only it would embrace its neighbors.
