Ecosystems of the Deep Oceans P.A. Tyler,2003-03-27 This volume examines the deep sea ecosystem from a variety of perspectives. The initial chapters examine the deep-sea floor, the deep pelagic environment and the more specialised chemosynthetic environments of hydrothermal vents and cold seeps. These environments are examined from the perspective of the relationship of deep-sea animals to their physico-chemical environment. Later chapters examine the biogeography of the main deep oceans (Atlantic, Pacific and Indian) with particular attention to the downward flux of surface-derived organic matter and how this drives the processes within the deep-sea ecosystem. The peripheral deep seas including the polar seas and the marginal deep seas (inter alia the Mediterranean, Red, Caribbean and Okhotsk seas) are explored in the same context. The final chapters examine the processes occurring in the deep sea and include an analysis of why the deep sea has high species diversity, how the fauna respond to organic input and how species have adapted reproductive activity in the deep sea. The volume concludes with an analysis of the anthropogenic impact on the deep sea.

Expedition Deep Ocean Josh Young,2020-12-01 The riveting story of the exploration of the final frontier of our planet—the deep ocean—and history-making mission to reach the bottom of all five seas. Humankind has explored every continent on earth, climbed its tallest mountains, and gone into space. But the largest areas of our planet remain largely a mystery: the deep oceans. At over 36,000 feet deep, there areas closest to earth’s core have remained nearly impossible to reach—until now. Technological innovations, engineering breakthroughs and the derring-do of a team of explorers, led by explorer Victor Vescovo, brought together an audacious global quest to dive to the deepest points of all five oceans for the first time in history. The expedition pushed technology to the limits, mapped hidden landscapes, discover previously unknown life forms and began to piece together how life in the deep oceans effects our planet—but it was far from easy. Expedition Deep Ocean is the inside story of this exploration of one of the most unforgiving and mysterious places on our planet, including the site of the Titanic wreck and the little-understood Hadal Zone. Vescovo and his team would design the most advanced deep-diving submersible ever built, where the pressure on the sub is 8 tons per square inch—the equivalent of having 292 fueled and fully loaded 747s stacked on top of it. And then there were hurricane-laden ocean waters and the byzantine web of global oceanography politics. Expedition Deep Ocean reveals the marvelous and other-worldly life found in all five deep ocean trenches, including several new species that have posed as of yet unanswered questions about survival and migration from ocean to ocean. Then there are the newly discovered sea mounts that cause tsunamis when they are broken by shifting subduction plates and jammed back into the earth crust, something that can now be studied to predict future disasters. Filled with high drama, adventure and the thrill of discovery, Expedition Deep Ocean celebrates courage and ingenuity and reveals the majesty and meaning of the deep ocean.

The Brilliant Deep Kate Messner,2018-05-08 The Brilliant Deep is the proud recipient of the ALA Notable Children's Books Award, the NSTA-CBC Best STEM Trade Books Award, the Junior Library Guild Selection and the ILA Teacher's Choices. All it takes is one: one coral gamete to start a colony in the ocean, one person to make a difference in the world, one idea to help us heal the earth. The ongoing conservation efforts to save and rebuild the world's coral reefs—with hammer and glue, and grafts of newly grown coral—are the living legacy of environmental scientist Ken Nedimyer, founder of the Coral Restoration Foundation. In telling the story of this sea conservation pioneer and marine life protector, Kate Messner and Matthew Forsythe create a stunning tribute to the wonders of nature and the power of human hope—a power even the smallest readers can access in their quest to aid our extraordinary planet. Recommended by experts for children who are reading independently and transitioning to longer books, The Brilliant Deep is perfect for the following reading categories: • Books for Kids Ages 5-9 • Children's Books for Kindergarten – 3rd Grade • Nonfiction Science Studies Education • Summer Reading

The Incredible Submersible Alvin Discovers a Strange Deep-sea World Bradford Matsen,2003 Describes the 1977 journey of the submersible ship Alvin, in which three explorers saw, for the first time, the strange marine life that dwells in hydrothermal vents and other mysteries of the deep sea. Inside the deep-diving submersible Alvin, three scientists peered out the portholes. Thousands of feet below the ocean's surface, Alvin continued its descent. Electric fans hummed and the green lights of the instrument dials glowed. Near a ridge on the sea floor, the crew spotted something in the searchlight! Isn't the deep ocean supposed to be like a desert? the pilot asked. Yes, replied the controller. The surprised pilot said, Well, there's all these animals down here. New forms of life had been discovered! Journey to the deepest reaches of the ocean to examine hydrothermal vents and the mysterious black smokers. Take a dive with Alvin and learn about Alvin's construction, the skillful pilots who control the sub, and the many advances it has made to further our knowledge of ocean life.

Hellions of the Deep Robert Gannon,1996-01-01 Ultimately, World War II was the first war won by technology, but within only a few weeks after the war began, the U.S. Navy realized its torpedo program was a dismal failure. Submarine skippers reported that most of their torpedoes were either missing the targets or failing to explode if they did hit. The United States had to work fast if it expected to compete with the Japanese Long Lance, the biggest and fastest torpedo in the world, and Germany's electric and sonar models. Hellions of the Deep tells the dramatic story of how Navy planners threw aside the careful procedures of peacetime science and initiated &radical research&: gathering together the nation's best scientists and engineers in huge research centers and giving them freedom of experimentation to create sophisticated weaponry with a single goal&—winning the war. The largest center for torpedo work was a requisitioned gymnasium at Harvard University, where the most famous names in science worked with the best graduate students from all around the country at the business of war. They had to produce tangible weapons, to consider production and supply tactics, to take orders from the military, and, in many cases, also to teach the military how to use the weapons they developed. World War II grew into a chess match played by scientists

and physicists, and it became the only war in history to be won by weapons invented during the conflict. For this book, Robert Gannon conducted numerous interviews over a twenty-year period with scientists, engineers, physicists, submarine skippers, and Navy bureaucrats, all involved in the development of the advanced weapons technology that won the war. While the search for new weapons was deadly serious, stretching imagination and resourcefulness to the limit each day, the need was obvious: American ships were being blown up daily just outside the Boston harbor. These oral histories reveal that, in retrospect, surprising even to those who went through it, the search for the &hellions of the deep& was, for many, the most exciting period of their lives.

Beyond the Deep William Stone,Barbara am Ende,Monte Paulsen,2010-05-30 The Huautla in Mexico is the deepest cave in the Western Hemisphere, possibly the world. Shafts reach skyscraper-depths, caverns are stadium-sized, and sudden floods can drown divers in an instant. With a two-decade obsession, William Stone and his 44-member team entered the sinkhole at Sotano de San Augustin. The first camp settled 2,328 feet below ground in a cavern where headlamps couldn't even illuminate the walls and ceiling. The second camp teetered precariously above an underground canyon where two subterranean rivers collided. But beyond that lay the unknown territory -- a flooded corridor that had blocked all previous comers, claimed a diver's life, and drove the rest of the team back. Except for William Stone and Barbara am Ende, who forged on for 18 more days, with no hope of rescue, to set the record for the deepest cave dive in the Western Hemisphere.

Living Deep in a Shallow World Sanford Zensen,2020-12-16 Living Deep in a Shallow World was written for the Christ-follower who wants more out of life than the typical, daily Christian experience, especially living in a culture that majors on pointless pursuits, questionable moral issues, destructive behavioral patterns, and values of lesser importance—those that promise much but deliver so little. The book challenges the reader to live as God intended—approaching all of life with an eternal perspective, pursuing excellence everywhere, serving the kingdom of God in the place of God’s choosing, loving God and people more deeply, relying more fully on God in times of trial and trouble, taking seriously the coming judgment of God, and finally sharing the gospel message of God’s love and mercy in both “word and deed.” Living Deep in A Shallow World is the way life was meant to be—the self-life crucified, dead and gone, and the Christ-life, alive and functioning well. The need for deep people who model Christlikeness and live like Jesus, think like Jesus, and love like Jesus is critical and necessary for the effectiveness and testimony of the church and the individual believer wanting to live better and deeper in a messed-up world.

A Morally Deep World Lawrence E. Johnson,1993-01-29 Advocating a major change in our attitude toward the nonhuman world, the author argues that nonhuman animals, as well as ecosystems, are morally significant beings with interests and rights.

Creatures of the Deep Erich Hoyt,2014-10-09 Praise for the first edition: More than a picture book ... Hoyt's elegant writing provides both the historical background for deep-sea exploration and an ecological perspective on life in the ocean's depths. -- American Scientist A magnificent bestiary ... and a reminder of how little we actually know about the seas surrounding us. -- Popular Science Winner, Outstanding Nonfiction Book of the Year -- American Society of Journalists and Authors, Inc., New York In this updated and expanded edition of Creatures of the Deep, award-winning nature and science writer Erich Hoyt gives readers a glimpse of the amazing variety of creatures found in the deepest parts of the ocean. Weaving together details from the latest scientific research about sharks, giant squid, dragonfish, huge tube worms, clams and tiny microbes of the deep-sea vents, Hoyt embarks on a magical journey roaming across the abyssal plains and descending into deep-sea trenches more than 20,000 feet down. Hoyt unravels the complex predator-prey relationships, from killer copepods to battles between giant squid and sperm whales, presenting compelling portraits of animals that are superbly adapted denizens of a dark high-pressure world. There are life forms, independent of sunlight and photosynthesis, which flourish around the hot, sulfurous deep-sea vents in the magnificent rift valley of the mid-ocean ridge, the world's longest mountain range. Surviving in conditions that appear to be close to the very soup of primordial Earth, these microbes have become the basis for the latest research into Earth's origins. Fully illustrated with fantastic underwater imagery.
