The Routledge Companion to Media and Humanitarian Action explores the interconnections between media, old and new, and the humanitarian challenges that have come to define the twenty-first century. Contributors, including media professionals and experts in humanitarian affairs, grapple with what kinds of media language, discourse, terms, and campaigns can offer enough context and background knowledge to nurture informed global citizens. Case studies of media practices, content analysis and evaluation of media coverage, and representations of humanitarian emergencies and affairs offer further insight into the ways in which strategic communications are designed and implemented in field of humanitarian action.

Escaping the Progress Trap Daniel Brian O'Leary,2005-12-31 The Progress Trap? As the name implies, it is the condition in which we find ourselves when science, technology and industry create more problems than they can solve. Often inadvertently. Many experts have warned about the resulting ecological crisis. The prophets of doom have spoken and alarm bells have sounded. Some critics are even optimistic, but they have no plan. They have not provided a detailed analysis of why humans fall into progress traps. They have not put forward what is necessary for emerging from them. Until now. Find out why societies have a tendency to become entangled in their own ingenuity. Then learn how well-equipped we humans are for resolving the environmental quandary, and other traps. Finding our way out of this predicament is a vital idea, when we learn how to nurture and use our talent for creative-problem-solving.

The Role of the Individual Rebecca Ferguson,2011-06-21 Now more than ever, it is important for our society to understand that global warming is a reality. There are so many things that we have done, under the guise of industrialization and bettering our economy, that have had, and still have, ramifications on our immediate environment. Charts, graphs, maps, and sidebars of key figures and events distill important, proven information regarding global warming, so that readers can easily refer to them for report-writing or while building their own well-informed opinion. Readers will learn about the current and impending challenges facing the planet and how it affects human health. Further exploration in this volume covers the impacts of extreme cold snaps; issues arising from aridity; diminished air capacity from smog, pollution, the ozone, and aero-allergens; and food security and food safety.

State of the World 1990 Lester Russell Brown,

Introduction to Green Chemistry John Andraos,Albert S. Matlack,2022-03-10 Interest in green chemistry and clean processes has grown so much in recent years that topics such as fluororous biphasic catalysis, metal organic frameworks, and process intensification, which were barely mentioned in the First Edition, have become major areas of research. In addition, government funding has ramped up the development of fuel cells and biofuels. This reflects the evolving focus from pollution remediation to pollution prevention. Copiously illustrated with more than 800 figures, the Third Edition provides an update from the frontiers of the field. It features supplementary exercises at the end of each chapter relevant to the chemical examples introduced in each chapter. Particular attention is paid to a new concluding chapter on the use of green metrics as an objective tool to demonstrate proof of synthesis plan efficiency and to identify where further improvements can be made through fully worked examples relevant to the chemical industry. NEW AND EXPANDED RESEARCH TOPICS Metal-organic frameworks Metrics Solid acids for alkylation of isobutene by butanes Carbon molecular sieves Mixed micro- and mesoporous solids Organocatalysis Process intensification and gas phase enzymatic reactions Hydrogen storage for fuel cells Reactive distillation Catalysts in action on an atomic scale UPDATED AND EXPANDED CURRENT EVENTS TOPICS Industry resistance to inherently safer chemistry Nuclear power Removal of mercury from vaccines Removal of mercury and lead from primary explosives Biofuels Uses for surplus glycerol New hard materials to reduce wear Electronic waste Smart growth The book covers traditional green chemistry topics, including catalysis, benign solvents, and alternative feedstocks. It also discusses relevant but less frequently covered topics with chapters such as Chemistry of Long Wear and Population and the Environment. This coverage highlights the importance of chemistry to everyday life and demonstrates the benefits the expanded exploitation of green chemistry can have for society.
