Francisco S. N. Lobo

Wormholes, Warp Drives and Energy Conditions Francisco S. N. Lobo, 2017-05-16 Top researchers in the field of gravitation present the state-of-the-art topics outlined in this book, ranging from the stability of rotating wormholes solutions supported by ghost scalar fields, modified gravity applied to wormholes, the study of novel semi-classical and nonlinear energy conditions, to the applications of quantum effects and the superluminal version of the warp drive in modified spacetime. Based on Einstein's field equations, this cutting-edge research area explores the more far-fetched theoretical outcomes of General Relativity and relates them to quantum field theory. This includes quantum energy inequalities, flux energy conditions, and wormhole curvature, and sheds light on not just the theoretical physics but also on the possible applications to warp drives and time travel. This book extensively explores the physical properties and characteristics of these 'exotic spacetimes,' describing in detail the general relativistic geometries that generate closed timelike curves.

Wormhole Eric Brown, Keith Brooke, 2022-11-22 An eighty year old cold case murder investigation that stretches across light years and risks the future of mankind's new home. A hard SF/crime crossover from two respected and well-liked names in SF. --- 2110. Earth is suffering major resource shortages, and the impact of climate change is peaking, with much of the planet's equatorial regions turned to lifeless desert and populations displaced. Colonies have been established on Mars and the Moon, but these cannot hope to sustain any more than a scant population of hundreds of citizens. Attention has turned to the need to discover an extra-solar colony world. European scientists, using discoveries made at CERN, have identified the means of creating a wormhole in the space-time continuum, which would allow interstellar travel. However, to do so they must first physically transport one end of the wormhole to where they want it to be, so setting up a wormhole will always rely on physical travel first of all. A ship is sent to Mu Arae, earth-like planet discovered 10 years before. It is a journey that will take 80 years, the crew, who will eventually set up the wormhole on the planet, kept in suspended animation. But only a few years into the trip, catastrophe strikes and the ship blows up en route, killing all aboard. 2190, eighty years after the starship set out. Gordon Kemp is a detective working in the cold case department in London. Usually he works on cases closed ten, twenty-five years earlier. Now, however, he has been assigned a murder investigation closed, unsolved, over eighty years ago. What he unearths will change history and threatens everything we know about what the powers that be have planned for Earth. The tragedy that befell the ship 80 years before is not what it seems and the past and the present are radically different to what everyone on Earth believes. We made the journey. Why has it been kept a secret? File Under: Science Fiction [Who wants to live forever? | Old caps | New Worlds | Believe no one]

Wormhole in vitro : Big Bang model, Cronus Hyper-Capacitor and Teleporter Antonio Silvestro, 2021-03-20 The author is honored to have the opportunity to propose a cutting-edge 'Wormhole in vitro' in which state-matter would exchange through the Minkowski spacetime generating exceptional potential suitable for triggering the Cosmic Wave background (CWB) that have been taking part in the continuous cycle of birth, death, and rebirth

characterizing the Nirvana. Among its applications a realistic perspective about the abiogenesis Ab Initio Molecular Dynamic (AIMD) of the Solar System (SS), the spontaneous generation and storage of power catching sunlight from the future to enlighten the past in the bouncing present where a SuperNova (SN) found her Black Hole, the once happened in the Triassic – Jurassic (Tr-Jr) transition encrypted on the glyphs of the Aztec Sun Stone Almanac named in honor of the jaguar Tezcatlipoca, and a suitable theoretical treasure for the design of a human Teleporter. Nevertheless, here and now, the spacetime fringe has been instantaneously passed led to the creation of a device able to transduce the genome of unicellular organisms via the quanta. Choosing the primeval ocean like the descendant of the Last Universal Common Ancestor (LUCA) most close to it and still alive in the current Holocene, the phototrophic Cyanobacteria has been highlighted that the AIMD has begun before the Big Bang in a White Hole related to the Black Hole of the Solar System Supernova from which the planets, among which the Earth where we sentient being all living on for the moment (Mars displacement coming soon - 2025) like the heterotrophic fish spoilage Proteobacteria Alteromonadales Shewanellaceae, shedding light on a potential genesis of the water molecule (H₂O) behind the spatial mirror dated 13.8 GYA.

The Wormhole Lee Dorsey,2021-01-01 General Erotica. Five Hundred years in the future, fanatical Muslims have taken over the planet with the exception of North America. However, it's just a matter of time before they're conquered too. With that fact facing the desperate people, they leave Earth, traveling through a Wormhole to the Triangulum Galaxy, settling on a planet similar to the Earth. They name their new home M-23. Officers on the space transports are assigned sexual encounters with young female crew members every ten days. Once the M-23 colony is established, the government gives them permission to marry. Female Officers are assigned sexual partners; their sexual encounters exploratory and usually free from inhibitions. One day, while exploring M-23, three young women disappear, only to reappear three days later with their memories completely erased. The cause of this anomaly is traced to a mysterious foreign matter, which the settlers turn into a weapon they refer to as BE1. They'll take the weapon back to Earth to reclaim the planet. However, on arrival, they discover that the Muslims living there are now 180 years in the future, and have no idea what transpired in the past. They live as 7th Century Muslims

under Sharia Law. And thus a war begins that will decide the fate of the Earth.

Call of the Cosmic Wild. Relativistic Rockets for the New Millennium. James Essig, 2016-04-13 This book includes numerous calculations for the many specific examples included within. I have included the many calculated examples to provide the reader with immediate justifications for the numerous concepts described. This was not done to belittle or talk down to the reader but rather to give the reader a clear sense of the plausibility for the propulsion methods and performance capabilities thereof. Interstellar travel at the many specific highly relativistic velocities contemplated in this book and, in some cases, extreme vehicle masses is still a very controversial subject but nonetheless a highly mathematicalized and intelligible subject. My hope and intention is to thus clearly inspire and show the reader the plausibility of the concepts by providing the reader with proper evidence through his or her simple inspection of the formulas and values included in the computations. Some speculative physics is included, which is based on commonly presented theoretical constructs.

Through the Wormhole Robert J. Favole, 2001 By means of special software, Michael and Kate travel back in time to save Michael's ancestor, a Black cavalryman during the Revolutionary War, and to warn Lafayette of a kidnapping plot.

Wormhole C E Marshall, 2019-12-30 Having defeated the evil that forced the inhabitants of Paxlene, both human and animal to seek refuge at night in well lit locations. They attempt to return to Earth but reach it just before a large asteroid crashes into the Earth. They manage to cocoon a few isolated places then turn their faces back towards Paxlene. Shortly into their journey they discover that they can no longer access their controls and their course has been changed. Intercepted by friends from Paxlene both vessels are pulled towards, but not into, what they believe to be a black hole. They are met by another vessel whose occupants beg for help in sorting a problem on their planet. After much discussion and a visit to Paxlene, they agree to go with the strangers, although they are aware that there is something strange about them. They find that what they believed to be a black hole is in fact a Wormhole through space. They pass through and come out in a new galaxy and land on the planet Traymar. As they come in they are confronted by dragons. Their new friends cannot understand why they are so calm. As when they approached it appeared the whole planet was on fire. Adventure follows and two of our characters are eventually changed. They have to work hard to be accepted into this society. Another form of evil is encountered and defeated followed by another attempt to return to Earth. The story continues with the final book 'Restitution'.

Ad Hoc Networks Shiwen Mao, Scott Midkiff, Hua Zhu, 2010-01-23 Ad hoc networks refer to the wireless networking paradigm that covers a variety of network forms for specific purposes, such as mobile ad hoc networks, sensor networks, vehicular networks, underwater networks, underground networks, personal area networks, and home networks. The various forms of ad hoc networks promise a broad scope of applications in civilian, commercial, and military areas, which have led to significant new research problems and challenges, and have attracted great efforts from academia, industry, and government. This unique networking paradigm necessitates re-examination of many established wireless networking concepts and protocols, and calls for developing new fundamental understanding of problems such as interference, mobility, connectivity, capacity, and security, among others. While it is essential to advance theoretical research on fundamentals and practical research on efficient algorithms and protocols, it is also critical to develop useful applications, experimental prototypes, and real-world deployments to achieve a practical impact on our society for the success of this networking paradigm. The annual International Conference on Ad Hoc Networks (AdHocNets) is a new event that aims at providing a forum to bring together researchers from academia as well as practitioners from industry and government to meet and exchange ideas and recent research work on all aspects of ad hoc networks. As the first edition of this event, AdHocNets 2009 was successfully held in Niagara Falls, Ontario, Canada, during September 22–25, 2009.

Inside the Worm's Hole Meish Goldish, 2013-08-01 It's a cool, damp night, and a wriggling worm searches for food in a garden. Before the sun rises, it returns to its home in the soil. Tiny hairs on the worm's skin grab the dirt to help the crawler move forward. As the worm squirms underground, its long body breaks up the soil and creates tunnels. Welcome to the worm's hole! Clear text, colorful photos, and diagrams will engage young readers as they explore the habitat, physical characteristics, diet, and behavior of these curious creatures. Age-appropriate activities and critical-thinking questions give readers an opportunity to make observations and gain valuable insights.

Parallel Computer Routing and Communication Sudhakar Yalamanchili, Jose Duato, 2003-06-26 This workshop was a continuation of the PCRCW '94 workshop that focused on issues in parallel communication and routing in support of parallel processing. The workshop series provides a forum for researchers and designers to exchange ideas with respect to challenges and issues in supporting communication for high-performance parallel computing. Within the last few years we have seen the scope of interconnection network technology expand beyond traditional multiprocessor systems to include high-availability clusters and the emerging class of system area networks. New application domains are creating new requirements for interconnection network services, e.g., real-time video, online data mining, etc. The emergence of quality-of-service guarantees within these domains challenges existing approaches to interconnection network design. In the recent past we have seen the emphasis on low-latency software

layers, the application of multicomputer interconnection technology to distributed shared-memory multiprocessors and LAN interconnects, and the shift toward the use of commodity clusters and standard components. There is a continuing evolution toward powerful and inexpensive network interfaces, and low-cost, high-speed routers and switches from commercial vendors. The goal is to address the above issues in the context of networks of workstations, multicomputers, distributed shared-memory multiprocessors, and traditional tightly-coupled multiprocessor interconnects. The PCRCW '97 workshop presented 20 regular papers and two short papers covering a range of topics dealing with modern interconnection networks. It was hosted by the Georgia Institute of Technology and sponsored by the Atlanta Chapter of the IEEE Computer Society.

The Black Wormhole Q. Taylor, 2020-12-21 The Black Wormhole is a novel about the incredible discoveries of Earth and the fantastic journey of two astronauts into one of the greatest mysteries of the universe. The story starts you in the far future of mass Ion Collider production and space living, then launches you into a fast pace adventure, on a ride of interdimensional time travel into the strange anomaly now manifesting in the center of our Solar system. Aboard the S. W. Hawkings space shuttle, join astronauts, John Shark and Duke Wheeler on their discover of new technology and a strange alien world as they navigate towards the Black Wormhole.

Advances in Neural Information Processing Systems 16 Sebastian Thrun, Lawrence K. Saul, Bernhard Schölkopf, 2004 Papers presented at the 2003 Neural Information Processing Conference by leading physicists, neuroscientists, mathematicians, statisticians, and computer scientists. The annual Neural Information Processing (NIPS) conference is the flagship meeting on neural computation. It draws a diverse group of attendees -- physicists, neuroscientists, mathematicians, statisticians, and computer scientists. The presentations are interdisciplinary, with contributions in algorithms, learning theory, cognitive science, neuroscience, brain imaging, vision, speech and signal processing, reinforcement learning and control, emerging technologies, and applications. Only thirty percent of the papers submitted are accepted for presentation at NIPS, so the quality is exceptionally high. This volume contains all the papers presented at the 2003 conference.

The Wormholers Jamila Gavin, 1996 Chad's step-sister, Natalie, falls into a crack in his bedroom. Desperate to get her back, he seeks the help of Sophie, super-intelligent but confined to a wheelchair with cerebral palsy. They all end up in the Wormhole. 10+

Wormhole is a humorous look at governments and people in a science fiction setting. It takes place in a far off sector of the Milky Way galaxy called the Quadrant. Josh is swept out of earth's solar system and dropped into a realm he knows nothing about. He is captured by an alien but manages to escape, only to be apprehended by another alien – a female bounty hunter. Together they are forced to go on the lamb when a mysterious person who remains in the shadows places their lives in danger. No one could have anticipated the odd characters who would aid them on their journey.

Welcome to the Universe Neil deGrasse Tyson, Michael Strauss, J. Richard Gott, 2016-09-12 The New York Times bestselling tour of the cosmos from three of today's leading astrophysicists Welcome to the Universe is a personal guided tour of the cosmos by three of today's leading astrophysicists. Inspired by the enormously popular introductory astronomy course that Neil deGrasse Tyson, Michael A. Strauss, and J. Richard Gott taught together at Princeton, this book covers it all—from planets, stars, and galaxies to black holes, wormholes, and time travel. Describing the latest discoveries in astrophysics, the informative and entertaining narrative propels you from our home solar system to the outermost frontiers of space. How do stars live and die? Why did Pluto lose its planetary status? What are the prospects of intelligent life elsewhere in the universe? How did the universe begin? Why is it expanding and why is its expansion accelerating? Is our universe alone or part of an infinite multiverse? Answering these and many other questions, the authors open your eyes to the wonders of the cosmos, sharing their knowledge of how the universe works. Breathtaking in scope and stunningly illustrated throughout, Welcome to the Universe is for those who hunger for insights into our evolving universe that only world-class astrophysicists can provide.
