Call of the Cosmic Wild. Relativistic Rockets for the New Millennium. James Essig,2016-04-13 This book includes numerous calculations for the many specific examples included within. I have included the many calculated examples to provide the reader with immediate justifications for the numerous concepts described. This was not done to belittle or talk down to the reader but rather to give the reader a clear sense of the plausibility for the propulsion methods and performance capabilities thereof. Interstellar travel at the many specific highly relativistic velocities contemplated in this bookand, in some cases, extreme vehicle masses is still a very controversial subject but nonetheless a highly mathematicalized and intelligible subject. My hope and intention is to thus clearly inspire and show the reader the plausibility of the concepts by providing the reader with proper evidence through his or her simple inspection of the formulas and values included in the computations. Some speculative physics is included, which is based on commonly presented theoretical constructs.

The Star Trek: Deep Space Nine: The Siege Peter David,2000-05-23 Deep Space Nine™ is forced to curtail entry to the wormhole due to increased graviton emissions, and an air of biting tension settles over the station. This anxiety leads to the murder of an Edeman religious leader, Commander Benjamin Sisko and Security Chief Odo realize they face a larger problem. Soon Sisko and Odo have more lifeless bodies on their hands and a killer who strikes without motive. Then, both the Edemans and Cardassians arrive threatening to destroy the station unless the murderer is given to them for retribution. In order to save Deep Space Nine and stop the killing, Odo must try to destroy a powerful assassin who is the only link to his mysterious past.

The Warped Side of Our Universe: An Odyssey through Black Holes, Wormholes, Time Travel, and Gravitational Waves Kip Thorne,2023-10-31 Epic verse and pulsating paintings merge to shed light on time travel, black holes, gravitational waves and the birth of the universe. Nearly two decades in the making, The Warped Side of Our Universe marks the historic collaboration of Nobel Laureate Kip Thorne and award-winning artist Lia Halloran. It brings to vivid life the wonders and wildness of our universe's "Warped Side"—objects and phenomena made from warped space and time, from colliding black holes and collapsing wormholes to twisting space vortices and down-cascading time. Through poetic verse and otherworldly paintings, the authors explicate Thorne's and colleagues' astrophysical discoveries and speculations, with an epic narrative that asks: How did the universe begin? Can anything travel backward in time? And what weird and marvelous phenomena inhabit the Warped Side? Featuring more than 100 paintings, including a soaring Stephen Hawking, this one-of-a-kind volume, with its multiple gatefolds, takes us on an Odyssean voyage into and through the Warped Side of Our Universe.

More the Black-Eyed Susan Anna Siu,2022-05-04 It is not easy being human It is

easy to be mean But those who vow not to be Are leaves and always green The anatomy of a blossom Is based on extract of the base And when we rise above the fray We begin to find our way We must fight the good fight still and burdens do we share Though the fight may not be fair The fight is already won if we do not succumb Like hungry ants to junk like broken chips and cookie crumbs And one can preserve, restore, or reawaken at a premium the plum Better parts that suck their thumbs And do not have to flash their gums to everyone or anyone Only ones that make their kindred spirits hum The fight inside not shy the butterflies Eternity be our radii

Requiem Of Lost Tymes Thomas J. Wood,2014-12-08 Requiem Of Lost Tymes, Chronicles I Roakan rose from his concealed cover, raised his sword above his head as more human warriors ran down the ramp of the warship to reformatify their depleting forces. Roakan let out a mighty blood curdling battle cry and lowered his sword toward the human formation and as he did so he began jumping over the rubble that concealed him and led his warriors on a foot charge into the ranks of the human contingent. As he reached the first line of the human enemies Obai'zen and his warriors were on their enemies rear flank as both collided with the wall of the human warriors at the front and rear flanks at almost the same instant. The humans by this time had drawn hand weapons and met the onslaught with as much fearlessness as the attacking Goathrunouk warriors. The two lines of warriors entangled in a clash of bodies, metal, and bone. In the morning sunrise there

was the glitter of flashing swords, shredded metal, and the spray of blood as warriors screamed their last life's song. Soon, all that would be left would be the silent victors and the dying as the sun continued to rise as it had done so for millions of years before, unaffected in its designed purpose by the happenings of mere mortals.

Science Fiction Film, Television, and Adaptation Jay Telotte, Gerald Duchovnay, 2011-08-02 While film and television seem to be closely allied screen media, our feature films and television series have seldom been successfully adapted across those screens. In fact, rather than functioning as portals, those allied media often seem, quite literally, screens that filter out something that made the source work so popular in its original form. Differences in budget, running times, cast, viewing habits, screen size and shape all come into play, and this volume's aim is to track a number of popular texts in the course of their adaptive journeys across the screens in order to sketch the workings of that cross-media adaptation. For its specific examples, the volume draws on a single genre—science fiction—not only because it is one of the most popular today in either film or television, but also because it is arguably the most self-conscious of contemporary genres, and thus one that most obviously frames the terms of these technological adaptations. The essays included here mine that reflexive character, in both highly successful and in failed efforts at cross-media adaption, to help us understand what film and television achieve in screening science fiction, and to reveal some of the key issues involved in all of our efforts to navigate the various screens that have become part of contemporary culture.

Wormhole Velocity Compositions Galore James M. Essig, 2016-01-19 Now, it is reasonable to ponder a velocity composition correction factor that would be included in the formulation for compositions of two or more light-speed motions. We thus will include suffixes as multiplicative factors to each completed formula for veloccity compositions. We assume gamma factors equal to $[(\text{Aleph } 0) \text{ EXP } n]$ where n is finitely greater than zero but less than or equal to one for each velocity component of a composition as it would be in the case if each component was independent with respect to its referenced reference frame were the reference frame would be the background of zero velocity. The background may be considered the rest frame for measuring the CMBR or perhaps any real energy thermal emmissions from the background of space-time based on the Uncertainty Principle. In this book, I present some extremely lengthy and explicit formulas for variously increasingly more convoluted velocity compositions. This is done so that the readers with keen eyes for details can see the formulas in full and also convey to the general reader the complexity of velocity compositions with numerous degrees of freedom. Since velocity components can change with time, some merit is present in explicit expansion of highly convoluted velocity compositions. We now go one step further to consider scenarios for which similarly prepared

space-craft are placed in a secondary similarly prepared wormhole system which experiences the same classes of relative motion with respect to the primary wormhole internal space, but where the primary wormhole is part of a primary wormhole system that experiences the same classes of motion with respect to the background space-time. We conclude that three velocities with respect to the background space-time add linearly. Such linear superposed velocities may in principle allow travel through background space-time for craft equal to $3C$. The occurrence of such superluminal velocities may imply forcing nature to expose boundary conditions further implying spacecraft travel velocities that are neither purely special relativistic nor purely general relativistic. By approaching such extreme boundary conditions, perhaps new physics can be uncovered as well as new interpretations on what travel means. By stressing nature to such boundary conditions, perhaps novel space-time transport effects can be realized, as well as opening up potentially unlimited supplies of energy for a very cosmically advanced civilization. We go yet another step further to consider scenarios for which similarly prepared space-craft are placed in a tertiary similarly prepared wormhole system which experiences the same classes of relative motion with respect to the secondary wormhole internal space, but where the secondary wormhole is part of a secondary wormhole system that experiences the same classes of motion with respect to the primary wormhole space-time. We conclude that three velocities with respect to the background space-time add linearly. Such linear superposed velocities may in principle allow travel through background space-time for craft substantially equal to $4C$. The occurrence of such superluminal velocities may imply forcing nature to expose boundary conditions further implying spacecraft travel velocities that are neither purely special relativistic nor purely general relativistic. By approaching such extreme boundary conditions, perhaps new physics can be uncovered as well as new interpretations on what travel means. By stressing nature to such boundary conditions, perhaps novel space-time transport effects can be realized, as well as opening up potentially unlimited supplies of energy for a very cosmically advanced civilization.

Application of New Cybernetics in Physics Oleg Kupervasser, 2017-06-28 Application of New Cybernetics in Physics describes the application of new cybernetics to physical problems and the resolution of basic physical paradoxes by considering external observer influence. This aids the reader in solving problems that were solved incorrectly or have not been solved. Three groups of problems of the new cybernetics are considered in the book: (a) Systems that can be calculated based on known physics of subsystems. This includes the external observer influence calculated from basic physical laws (ideal dynamics) and dynamics of a physical system influenced even by low noise. (b) Emergent systems. This includes external noise from the observer by using the black box model (complex dynamics), external noise from the observer by using the observer's intuition (unpredictable dynamics), defining boundaries of application of scientific methods for system behavior prediction, and the role of the observer's intuition for unpredictable systems. (c) Methods for solution of basic physical paradoxes by using methods of the new cybernetics: the entropy increase paradox, Schrödinger's cat paradox (wave package reduction in quantum mechanics), the black holes information paradox, and the time wormholes grandfather paradox. All of the above paradoxes have the same resolution based on the principles of new cybernetics. Indeed, even a small interaction of an observer with an observed system results in their time arrows' alignment (synchronization) and results in the paradox resolution and appearance of the universal time arrow. Provides solutions to the basic physical paradoxes and demonstrates their practical actuality for modern physics Describes a wide class of molecular physics and kinetic problems to present semi-analytical and semi-qualitative calculations of solvation, flame propagation, and high-molecular formation Demonstrates the effectiveness in application to complex molecular systems and other many-component objects Includes numerous illustrations to

Wormhole C E Marshall, 2019-12-30 Having defeated the evil that forced the inhabitants of Paxlene, both human and animal to seek refuge at night in well lit locations. They attempt to return to Earth but reach it just before a large asteroid crashes into the Earth. They manage to cocoon a few isolated places then turn their faces back towards Paxlene. Shortly into their journey they discover that they can no longer access their controls and their course has been changed. Intercepted by friends from Paxlene both vessels are pulled towards, but not into, what they believe to be a black hole. They are met by another vessel whose occupants beg for help in sorting a problem on their planet. After much discussion and a visit to Paxlene, they agree to go with the strangers, although they are aware that there is something strange about them. They find that what they believed to be a black hole is in fact a Wormhole through space. They pass through and come out in a new galaxy and land on the planet Traymar. As they come in they are confronted by dragons. Their new friends cannot understand why they are so calm. As when they approached it appeared the whole planet was on fire. Adventure follows and two of our characters are eventually changed. They have to work hard to be accepted into this society. Another form of evil is encountered and defeated followed by another attempt to return to Earth. The story continues with the final book 'Restitution'.

The Science of Interstellar Kip Thorne, 2014-11-07 A journey through the otherworldly science behind Christopher Nolan's award-winning film, Interstellar, from executive producer and Nobel Prize-winning physicist Kip Thorne. Interstellar, from acclaimed filmmaker Christopher Nolan, takes us on a fantastic voyage far beyond our solar system. Yet in The Science of Interstellar, Kip Thorne, the Nobel prize-winning physicist who assisted Nolan on the scientific aspects of Interstellar, shows us that the movie's jaw-dropping events and stunning, never-before-attempted visuals are grounded in real science. Thorne shares his experiences working as the science adviser on the film and then moves on to the science itself. In chapters on wormholes, black holes, interstellar travel, and much more, Thorne's scientific insights—many of them triggered during the actual scripting and shooting of Interstellar—describe the physical laws that govern our universe and the truly astounding phenomena that those laws make possible. The Essential Cult TV Reader David Lavery, 2021-09-15 The Essential Cult TV Reader is a collection of insightful essays that examine television shows that amass engaged, active fan bases by employing an imaginative approach to programming. Once defined by limited viewership, cult TV has developed its own identity, with some shows gaining large, mainstream audiences. By exploring the defining characteristics of cult TV, The Essential Cult TV Reader traces the development of this once obscure form and explains how cult TV achieved its current status as legitimate television. The essays explore a wide range of cult programs, from early shows such as Star Trek, The Avengers, Dark Shadows, and The Twilight Zone to popular contemporary shows such as Lost, Dexter, and 24, addressing the cultural context that allowed the development of the phenomenon. The contributors investigate the obligations of cult series to their fans, the relationship of camp and cult, the effects of DVD releases and the Internet, and the globalization of cult TV. The Essential Cult TV Reader answers many of the questions surrounding the form while revealing emerging debates on its future.

Empire in Crisis Dietmar Arthur Wehr, 2016-07-29 The Empire is a political entity that encompasses hundreds of colonized worlds united by a common language (Esperanto) and under a single individual, the Emperor. But the Empire is getting old and creaky. Its government is riddled with corruption and is choking on red tape. The Space Force is bloated with the incompetent who have risen to high rank due to nepotism and patronage. The Emperor has been assassinated and the Empire is surrounded by alien races that are becoming more hostile and more powerful as time goes on. When an exploration fleet in the rift between sections of the spiral arm are attacked by an unknown race, the dead Emperor's clone-son, now on the throne, recognizes that the Empire is standing at the edge of an abyss and must find a way to not only win this new war against the alien aggressors but also overcome the inertia of the arrogant Space Force officers who are more ready to overthrow their Emperor than fight the war. Fans of military SF action will find it in this book.
