**Guidelines for the management of symptomatic sexually transmitted infections** World Health Organization,2021-07-15 The WHO global health sector strategy on sexually transmitted infections, 2016–2021, endorsed by the World Health Assembly in 2016, aims to eliminate STIs as a public health threat by 2030. In 2019, WHO published estimates of new cases of chlamydia, gonorrhoea, syphilis and trichomoniasis. Recent changes in the epidemiology of STIs and progress in prevention, diagnosis and treatment of STIs and HIV have necessitated changes in approaches to STI prevention and management. To address these STIs, the most widely used approach in clinical settings is the syndromic management of STIs. In most resource-limited settings, the syndromic management flow charts are still the standard of care where laboratory diagnosis is not available or is hard to access. The objectives of these guidelines are to provide updated, evidence-informed clinical and practical recommendations on the case management of people with symptoms of STIs; and to support countries in updating their national guidelines for the case management of people with symptoms of STIs. These guidelines include the management of symptomatic infections related to urethral discharge syndrome, including persistent urethral discharge syndrome; vaginal discharge syndrome, including persistent vaginal discharge; anorectal infection; genital ulcer disease syndrome; and lower abdominal pain syndrome. These guidelines are intended for programme managers for STI prevention and control at the national level and the health-care providers at the frontline – primary, secondary and tertiary health care.

Enhancing the Effectiveness of Team Science National Research Council,Division of Behavioral and Social Sciences and Education,Board on Behavioral, Cognitive, and Sensory Sciences,Committee on the Science of Team Science,2015-07-15 The past half-century has witnessed a dramatic increase in the scale and complexity of scientific research. The growing scale of science has been accompanied by a shift toward collaborative research, referred to as team science. Scientific research is increasingly conducted by small teams and larger groups rather than individual investigators, but the challenges of collaboration can slow these teams' progress in achieving their scientific goals. How does a team-based approach work, and how can universities and research institutions support teams? Enhancing the Effectiveness of Team Science synthesizes and integrates the available research to provide guidance on assembling the science team; leadership, education and professional development for science teams and groups. It also examines institutional and organizational structures and policies to support science teams and identifies areas where further research is needed to help science teams and groups achieve their scientific and translational goals. This report offers major public policy recommendations

for science research agencies and policymakers, as well as recommendations for individual scientists, disciplinary associations, and research universities. Enhancing the Effectiveness of Team Science will be of interest to university research administrators, team science leaders, science faculty, and graduate and postdoctoral students.

Structure and Dynamics of Confined Polymers John J. Kasianowicz, M. Kellermayer, D. DEAMER, 2002-07-31 Polymers are essential to biology because they can have enough stable degrees of freedom to store the molecular code of heredity and to express the sequences needed to manufacture new molecules. Through these they perform or control virtually every function in life. Although some biopolymers are created and spend their entire career in the relatively large free space inside cells or organelles, many biopolymers must migrate through a narrow passageway to get to their targeted destination. This suggests the questions: How does confining a polymer affect its behavior and function? What does that tell us about the interactions between the monomers that comprise the polymer and the molecules that confine it? Can we design and build devices that mimic the functions of these nanoscale systems? The NATO Advanced Research Workshop brought together for four days in Bikal, Hungary over forty experts in experimental and theoretical biophysics, molecular biology, biophysical chemistry, and biochemistry interested in these questions. Their papers collected in this book provide insight on biological processes involving confinement and form a basis for new biotechnological applications using polymers. In his paper Edmund DiMarzio asks: What is so special about polymers? Why are polymers so prevalent in living things? The chemist says the reason is that a protein made of N amino acids can have any of 20 different kinds at each position along the chain, resulting in 20<sup>N</sup> different polymers, and that the complexity of life lies in this variety.

**Spaceborne Antennas for Planetary Exploration** William A. Imbriale, 2006-08-04 JPL spacecraft antennas—from the first Explorer satellite in 1958 to current R & D Spaceborne Antennas for Planetary Exploration covers the development of Jet Propulsion Laboratory (JPL) spacecraft antennas, beginning with the first Explorer satellite in 1958 through current research and development activities aimed at future missions. Readers follow the evolution of all the new designs and technological innovations that were developed to meet the growing demands of deep space exploration. The book focuses on the radio frequency design and performance of antennas, but covers environmental and mechanical considerations as well. There is additionally a thorough treatment of all the analytical and measurement techniques used in design and performance assessment. Each chapter is written by one or more leading experts in the field of antenna technology. The presentation of the history and technology of spaceborne antennas is aided by several features: \* Photographs and drawings of JPL spacecraft \* Illustrations to help readers visualize concepts and designs \* Tables highlighting and comparing the performance of the antennas \* Bibliographies at the end of each chapter leading to a variety of

primary and secondary source material This book complements Large Antennas of the Deep Space Network (Wiley 2002), which surveys the ground antennas covered in support of spacecraft. Together, these two books completely cover all JPL antenna technology, in keeping with the JPL Deep Space Communications and Navigation Series mission to capture and present the many innovations in deep space telecommunications over the past decades. This book is a fascinating and informative read for all individuals working in or interested in deep space telecommunications.

*Treating Pathological Narcissism with Transference-Focused Psychotherapy* Diana Diamond, Frank E. Yeomans, Barry L. Stern, Otto F. Kernberg, 2021-11-11 Filling a crucial gap in the clinical literature, this book provides a contemporary view of pathological narcissism and presents an innovative treatment approach. The preeminent authors explore the special challenges of treating patients--with narcissistic traits or narcissistic personality disorder--who retreat from reality into narcissistic grandiosity, thereby compromising their lives and relationships. Assessment procedures and therapeutic strategies have been adapted from transference-focused psychotherapy (TFP), a manualized, evidence-based treatment for borderline personality disorder. Rich case material illustrates how TFP-N enables the clinician to engage patients more deeply in therapy and help them overcome relationship and behavioral problems at different levels of severity. The volume integrates psychodynamic theory and research with findings from social cognition, attachment, and neurobiology.

*Curriculum Auditing* Fenwick W. English, 1988 This book explains curriculum audits and how to conduct them. Chapter I, Why Audit? presents criteria for determining if an audit is warranted and describes three basic types: functional, operational, and programmatic. Chapter II shows how the three primary activities of document review, interviews, and site visitations yield answers to the questions inherent in each audit standard. Chapter III discusses writing the audit and provides guidelines in creating the final document, including the use of photographs. Chapter IV is an expose of the hidden curriculum, as revealed through still photographs. Chapters V through VIII present a series of case studies (with names changed to protect the districts involved) of audits conducted between 1986 and 1987. The purpose of the case studies is to demonstrate how data are used and to illustrate some of the shortcomings of the audit. Chapter IX discusses pre- and post-audit activities as linkages that connect the audit to practice and to change, and Chapter X addresses the working assumptions of the audit in a nonrational school system. Appended are (1) an annotated bibliography entitled The Essential Curriculum Audit Reader; (2) a survey instrument on good curriculum management practices; and (3) a sample board policy to establish curricular control. An index and bibliography are included. (TE)
