Arc of Containment Wen-Qing Ngoei,2019-05-15 Arc of Containment recasts the history of American empire in Southeast and East Asia from

World War II through the end of American intervention in Vietnam. Setting aside the classic story of anxiety about falling dominoes, Wen-Qing Ngoei articulates a new regional history premised on strong security and sure containment guaranteed by Anglo-American cooperation. Ngoei argues that anticommunist nationalism in Southeast Asia intersected with preexisting local antipathy toward China and the Chinese diaspora to usher the region from European-dominated colonialism to US hegemony. Central to this revisionary strategic assessment is the place of British power and the effects of direct neocolonial military might and less overt cultural influences based on decades of colonial rule, as well as the considerable influence of Southeast Asian actors upon Anglo-American imperial strategy throughout the post-war period. Arc of Containment demonstrates that American failure in Vietnam had less long-term consequences than widely believed because British pro-West nationalism had been firmly entrenched twenty-plus years earlier. In effect, Ngoei argues, the Cold War in Southeast Asia was but one violent chapter in the continuous history of western imperialism in the region in the twentieth century.

Global Media Studies Marwan Kraidy,Patrick D. Murphy,2004-02-24 Global Media Studies explores the theoretical and methodological threats

that are defining global media studies as a discipline. Emphasizing the connection of globalisation to local culture, this collection considers the diversity of modes of reception, reception contexts, uses of media content, and the performative and creative relationships that audiences develop with and through the media. Through ethnographic case studies from Brazil, Denmark, the UK, Japan, Lebanon, Mexico, South Africa, Turkey and the United States, the contributors address such questions as: what links media consumption to a lived global culture; what role cultural tradition plays globally in confronting transnational power; how global elements of mediated messages acquire class; and regional and local characteristics.

Dietary Reference Intakes for Vitamin A, Vitamin K, Arsenic, Boron, Chromium, Copper, Iodine, Iron, Manganese, Molybdenum, Nickel, Silicon, Vanadium, and Zinc Institute of Medicine,Food and Nutrition Board,Standing Committee on the Scientific Evaluation of Dietary Reference

Intakes,Subcommittee of Interpretation and Uses of Dietary Reference Intakes,Subcommittee on Upper Reference Levels of Nutrients,Panel on Micronutrients,2002-07-19 This volume is the newest release in the authoritative series issued by the National Academy of Sciences on dietary reference intakes (DRIs). This series provides recommended intakes, such as Recommended Dietary Allowances (RDAs), for use in planning nutritionally adequate diets for individuals based on age and gender. In addition, a new reference intake, the Tolerable Upper Intake Level (UL), has also been established to assist an individual in knowing how much is too much of a nutrient. Based on the Institute of Medicine's review of the scientific literature regarding dietary micronutrients, recommendations have been formulated regarding vitamins A and K, iron, iodine, chromium, copper, manganese, molybdenum, zinc, and other potentially beneficial trace elements such as boron to determine the roles, if any, they play in health. The book also: Reviews selected components of food that may influence the bioavailability of these compounds. Develops estimates of dietary intake of these compounds that are compatible with good nutrition throughout the life span and that may decrease risk of chronic disease where data indicate they play a role. Determines Tolerable Upper Intake levels for each nutrient reviewed where adequate scientific data are available in specific population subgroups. Identifies research needed to improve knowledge of the role of these micronutrients in human health. This book will be important to professionals in nutrition research and education.

Pheasants, Partridges & Grouse Phil McGowan,Steve Madge,2010-07-30 This guide brings together, for the first time in single volume, a

comprehensive review of all the world's pheasants, partridges, quails, grouse, turkeys, guineafowl, buttonquails, sandgrouse, and the enigmatic Plains-wanderer - over 250 species in all. The group includes some of the world's most familiar and beautiful birds, such as Indian Peafowl and the stunning tragopans, as well as some of the rarest and most threatened. Some survive in fragments of over-exploited habitats, whilst others are now so familiar in domestication that it is difficult to imagine that they had any wild ancestors at all. As with other volumes in the award-winning Helm Identification Guide series, this book concentrates on identification and distribution, but also highlights conversation issues where relevant. Each species is treated in detail, reflecting the extensive knowledge of both authors. The 72 colour plates, by leading bird illustrators, show male, female, juvenile and subspecies plumages, and form the finest set of illustrations of these birds to date. There is also a colour distribution map for each species. Pheasants, Partridges & Grouse is a welcome addition to the Helm Identification Guide series, more importantly, a landmark volume in the literature of this attractive and vulnerable group of birds.
