**Prepositioning Antibiotics for Anthrax** Institute of Medicine,Board on Health Sciences Policy,Committee on Prepositioned Medical Countermeasures for the Public,2012-02-26 If terrorists released *Bacillus anthracis* over a large city, hundreds of thousands of people could be at risk of the deadly disease anthrax-caused by the *B. anthracis* spores-unless they had rapid access to antibiotic medical countermeasures (MCM). Although plans for rapidly delivering MCM to a large number of people following an anthrax attack have been greatly enhanced during the last decade, many public health authorities and policy experts fear that the nation's current systems and plans are

insufficient to respond to the most challenging scenarios, such as a very large-scale anthrax attack. The U.S. Department of Health and Human Services' Office of the Assistant Secretary for Preparedness and Response commissioned the Institute of Medicine to examine the potential uses, benefits, and disadvantages of strategies for repositioning antibiotics. This involves storing antibiotics close to or in the possession of the people who would need rapid access to them should an attack occur. Prepositioning Antibiotics for Anthrax reviews the scientific evidence on the time window in which antibiotics successfully prevent anthrax and the implications for decision making about prepositioning, describes potential prepositioning strategies, and develops a framework to assist state, local, and tribal public health authorities in determining whether prepositioning strategies would be beneficial for their communities. However, based on an analysis of the likely health benefits, health risks, and relative costs of the different prepositioning strategies, the book also develops findings and recommendations to provide jurisdictions with some practical insights as to the circumstances in which different prepositioning strategies may be beneficial. Finally, the book identifies federal- and national-level actions that would facilitate the evaluation and development of prepositioning strategies. Recognizing that communities across the nation have differing needs and capabilities, the findings presented in this report are intended to assist public health officials in considering the benefits, costs, and trade-

offs involved in developing alternative prepositioning strategies appropriate to their particular communities.

Asbestos and Fire Rachel Maines,2013-08-30 For much of the industrial era, asbestos was a widely acclaimed benchmark material. During its heyday, it was manufactured into nearly three thousand different products, most of which protected life and property from heat, flame, and electricity. It was used in virtually every industry from hotel keeping to military technology to chemical manufacturing, and was integral to building construction from shacks to skyscrapers in every community across the United States. Beginning in the mid-1960s, however, this once popular mineral began a rapid fall from grace as growing attention to the serious health risks associated with it began to overshadow the protections and benefits it provided. In this thought-provoking and controversial book, Rachel Maines challenges the recent vilification of asbestos by providing a historical perspective on Americans' changing perceptions about risk. She suggests that the very success of asbestos and other fire-prevention technologies in containing deadly blazes has led to a sort of historical amnesia about the very risks they were supposed to reduce. Asbestos and Fire is not only the most thoroughly researched and balanced look at the history of asbestos, it is also an important contribution to a larger debate that considers how the risks of

technological solutions should be evaluated. As technology offers us ever-increasing opportunities to protect and prevent, Maines urges that learning to accept and effectively address the unintended consequences of technological innovations is a growing part of our collective responsibility.
