**A Linking of Heaven and Earth** Scott K. Taylor, 2016-03-23 The Reformation of the sixteenth century shattered the unity of medieval Christendom, and the resulting fissures spread to the corners of the earth. No scholar of the period has done more than Carlos M.N. Eire, however, to document how much these ruptures implicated otherworldly spheres as well. His deeply innovative publications helped shape new fields of study, intertwining social, intellectual, cultural, and religious history to reveal how, lived beliefs had real and profound implications for social and political life in early modern Europe. Reflecting these themes, the volume celebrates the intellectual legacy of Carlos Eire's scholarship, applying his distinctive combination of cultural and religious history to new areas and topics. In so doing it underlines the extent to which the relationship between the natural and the supernatural in the early modern world was dynamic, contentious, and always urgent. Organized around three sections - 'Connecting the Natural and the Supernatural', 'Bodies in Motion: Mind, Soul, and Death' and 'Living One's Faith' - the essays are bound together by the example of Eire's scholarship, ensuring a coherence of approach that makes the book crucial reading for scholars of the Reformation, Christianity and early modern cultural history.

**Theory of Mental Tests** Harold Gulliksen, 2013-07-04 This classic volume outlines, for both students and professionals, the mathematical theories and equations that are necessary for evaluating a test and for quantifying its characteristics. The author utilizes formulas that evaluate both the reliability and the validity of tests. He also provides the means for evaluating the reliability and validity of total test scores and individual item analysis. The work remains one of the only books on classical test theory to discuss applications, true score theory, the effect of test length on reliability and validity, and the effects of univariate and multivariate selection on validity.

*Handbook of Applied Spatial Analysis* Manfred M. Fischer, Arthur Getis, 2009-12-24 The Handbook is written for academics, researchers, practitioners and advanced graduate students. It has been designed to be read by those new or starting out in the field of spatial analysis as well as by those who are already familiar with the field. The chapters have been written in such a way that readers who are new to the field will gain important overview and insight. At the same time, those readers who are already

practitioners in the field will gain through the advanced and/or updated tools and new materials and state-of-the-art developments included. This volume provides an accounting of the diversity of current and emergent approaches, not available elsewhere despite the many excellent journals and te- books that exist. Most of the chapters are original, some few are reprints from the Journal of Geographical Systems, Geographical Analysis, The Review of Regional Studies and Letters of Spatial and Resource Sciences. We let our contributors - velop, from their particular perspective and insights, their own strategies for m- ping the part of terrain for which they were responsible. As the chapters were submitted, we became the first consumers of the project we had initiated. We gained from depth, breadth and distinctiveness of our contributors' insights and, in particular, the presence of links between them.
