**The Empire of Cnut the Great** Timothy Bolton, 2009 Drawing on a wide range of types of evidence this book offers a fresh impression of the a ~empirea (TM) built by King Cnut (1016a 1035) in England and Scandinavia, and offers insights into contemporary developments in the conceptions of this new dominion.

Resisting Categories: Latin American and/or Latino? Mari Carmen Ramirez, Tomas Ybarra-Frausto, Hector Olea, 2012-04-24 DIV This first volume of the Critical Documents of 20th-Century Latin American and Latino Art series published by the International Center for the Arts of the Americas at the Museum of Fine Arts, Houston, presents 168 crucial texts written by influential artists, critics, curators, journalists, and intellectuals whose writings shed light on questions relating to what it means to be Latin American and/or Latino. Reinforced within a critical framework, the documents address converging issues, including: the construct of Latin-ness itself; the persistent longing for a continental identity; notions of Pan-Latin Americanism; the emergence of collections and exhibitions devoted specifically to Latin American” or Latino art; and multicultural critiques of Latin American and Latino essentialism. The selected documents, many of which have never before been published in English, span from the late fifteenth century to the present day. They encompass key protagonists of this comprehensive history as well as unfamiliar figures, revealing previously unknown facets of the questions and issues at play. The book series complements the thousands of seminal documents now available through the ICAA Documents of 20th-Century Latin American and Latino Art digital archive, <http://icaadocs.mfah.org>. Together they establish a much-needed intellectual foundation for

the exhibition, collection, and interpretation of art produced in Latin America and among Latino populations in the United States. /div

**Classical Physics** Bekir Karaoglu, 2020-02-28 This textbook is specifically designed to meet the needs of students taking the two-semester calculus-based introductory physics courses now favored in many countries around the world. Accordingly, it is more concise than the extremely long standard textbooks, but offers the same modern approach and format. All core topics in classical physics are covered using straightforward language, including mechanics, thermodynamics, electromagnetism, and optics. The necessary mathematics is developed along the way, rigorously and clearly. The book also features a wealth of solved examples, which will deepen readers' conceptual comprehension and hone their problem-solving skills. In addition, some 430 problems and 400 multiple-choice questions serve to review key concepts and assess readers' progress. The material in the book has been successfully employed in classroom teaching for the past decade, during which time it has been successively refined. Given its scope, format and approach, the book is the ideal choice for all science, engineering, and medical students embarking on an introductory physics course.

**Proteases: Structure and Function** Klaudia Brix, Walter Stöcker, 2014-01-21

Proteolysis is an irreversible posttranslational modification affecting each and every protein from its biosynthesis to its degradation. Limited proteolysis regulates targeting and activity throughout the lifetime of proteins. Balancing proteolysis is therefore crucial for physiological homeostasis. Control mechanisms include proteolytic maturation of zymogens

resulting in active proteases and the shut down of proteolysis by counteracting endogenous protease inhibitors. Beyond the protein level, proteolytic enzymes are involved in key decisions during development that determine life and death – from single cells to adult individuals. In particular, we are becoming aware of the subtle role that proteases play in signaling events within proteolysis networks, in which the enzymes act synergistically and form alliances in a web-like fashion. Proteases come in different flavors. At least five families of mechanistically distinct enzymes and even more inhibitor families are known to date, many family members are still to be studied in detail. We have learned a lot about the diversity of the about 600 proteases in the human genome and begin to understand their physiological roles in the degradome. However, there are still many open questions regarding their actions in pathophysiology. It is in this area where the development of small molecule inhibitors as therapeutic agents is extremely promising. Approaching proteolysis as the most important, irreversible post-translational protein modification essentially requires an integrated effort of complementary research disciplines. In fact, proteolytic enzymes seem as diverse as the scientists working with these intriguing proteins. This book reflects the efforts of many in this exciting field of research where team and network formations are essential to move ahead.

Extracellular Matrix Degradation William C. Parks,Robert Mecham,2011-04-07

Regulated turnover of extracellular matrix (ECM) is an important component of tissue homeostasis. In recent years, the enzymes that participate in, and control ECM turnover have been the focus of research that touches on development, tissue remodeling,

inflammation and disease. This volume in the Biology of Extracellular Matrix series provides a review of the known classes of proteases that degrade ECM both outside and inside the cell. The specific EMC proteases that are discussed include cathepsins, bacterial collagenases, matrix metalloproteinases, meprins, serine proteases, and elastases. The volume also discusses the domains responsible for specific biochemical characteristics of the proteases and the physical interactions that occur when the protease interacts with substrate. The topics covered in this volume provide an important context for understanding the role that matrix-degrading proteases play in normal tissue remodeling and in diseases such as cancer and lung disease.

*The Rhetoric of Reaction* Albert O. Hirschman,1991-03 Hirschman maps the diffuse and treacherous world of reactionary rhetoric in which conservative public figures, thinkers, and polemicists have been arguing against progressive agendas and reforms for 200 years. Ultimately, he shows that progressives are apt to employ related rhetorical postures, which are as biased as their reactionary counterparts.

**The Problem of Atheism** Augusto Del Noce,2022-01-05 In 1964, Augusto Del Noce assembled in a book some of his best works on Marxism, atheism, and the history of

modern philosophy. The result was *Il problema dell'ateismo*, which he always regarded as foundational to his way of thinking. The book remains his best-known work and is still in print in Italy almost sixty years later. *The Problem of Atheism* offers the first English translation of this landmark book, one of the earliest works to recognize the new secularizing trends in Western culture following World War II. Del Noce situates atheism historically, reconstructing its philosophical trajectory through European modernity. Documenting the author's entire intellectual experience, these essays explore the birth of modern philosophy, reckon with the great European crisis of 1917 to 1945 and the Cold War that followed, and mine the opposition between Marxism and the rise of the affluent society. The result is rich with premonitions of the cultural landscape that would take shape throughout the 1960s and the decades that followed. Proving its English translation to be long overdue, *The Problem of Atheism* remains relevant to contemporary debates about secularization, political theology, and modernity.

**The Frontiers of Knowledge** A. C. Grayling, 2021-05-06 'Grayling brings satisfying order to daunting subjects' Steven Pinker \_\_\_\_\_ In very recent times humanity has learnt a vast amount about the universe, the past, and itself. But through our remarkable successes in acquiring knowledge we have learned how much we have yet to learn: the science we have, for example, addresses just 5 per cent of the universe; pre-history is still being revealed, with thousands of historical sites yet to be explored; and the new neurosciences of mind and brain are just beginning. What do we know, and how do we know it? What do we now know that we don't know? And what have we learnt about the obstacles to knowing more? In a time of deepening battles over what knowledge and truth

mean, these questions matter more than ever. Bestselling polymath and philosopher A. C. Grayling seeks to answer them in three crucial areas at the frontiers of knowledge: science, history and psychology. A remarkable history of science, life on earth, and the human mind itself, this is a compelling and fascinating tour de force, written with verve, clarity and remarkable breadth of knowledge. \_\_\_\_\_ 'Remarkable, readable and authoritative. How he has mastered so much, so thoroughly, is nothing short of amazing' Lawrence M. Krauss, author of *A Universe from Nothing* 'This book hums with the excitement of the great human project of discovery' Adam Zeman, author of *Aphantasia*

*In Defence of Wonder and Other Philosophical Reflections* Raymond Tallis, 2014-09-03 In these lively and provocative essays, philosopher, polymath and all-round intellectual heavyweight, Raymond Tallis debunks commonplace truths, exposes woolly thinking and pulls the rug from beneath a wide range of commentator whether scientist, theologian, philosopher or pundit. Tallis takes to task much of contemporary science and philosophy, arguing that they are guilty of taking us down ever narrowing conduits of problem solving that only invite ever more complex responses and in doing so have lost sight of wonder - the metaphysical intoxication that first gave birth to philosophy 2,500 years ago. Tallis tackles some meaty topics - memory, time, language, truth, fiction, consciousness - but always with his characteristic verve, insight and wit. These essays showcase Tallis's skill for getting to the heart of the matter and challenging us to see, and wonder, in different ways. Wonder is the proper state of humankind, and as these essays show it has no more forceful a champion than Raymond Tallis.

**The Rule of Laws** Fernanda Pirie, 2021-11-09 From ancient Mesopotamia to today, the

epic story of how humans have used laws to forge civilizations. Rulers throughout history have used laws to impose order. But laws were not simply instruments of power and social control. They also offered ordinary people a way to express their diverse visions for a better world. In *The Rule of Laws*, Oxford scholar Fernanda Pirie traces the rise and fall of the sophisticated legal systems underpinning ancient empires and religious traditions, while also showing how common people—tribal assemblies, merchants, farmers—called on laws to define their communities, regulate trade, and build civilizations. Although legal principles originating in Western Europe now seem to dominate the globe, the variety of the world's laws has long been almost as great as the variety of its societies. What truly unites human beings, Pirie argues, is our very faith that laws can produce justice, combat oppression, and create order from chaos.

**Aping Mankind** Raymond Tallis, 2016-04-14 Neuroscience has made astounding progress in the understanding of the brain. What should we make of its claims to go beyond the brain and explain consciousness, behaviour and culture? Where should we draw the line? In this brilliant critique Raymond Tallis dismantles Neuromania, arising out of the idea that we are reducible to our brains and Darwinitis according to which, since the brain is an evolved organ, we are entirely explicable within an evolutionary framework. With precision and acuity he argues that the belief that human beings can be understood in biological terms is a serious obstacle to clear thinking about what we are and what we might become. Neuromania and Darwinitis deny human uniqueness, minimise the differences between us and our nearest animal kin and offer a grotesquely simplified account of humanity. We are, argues Tallis, infinitely more interesting and complex than we appear in the mirror of

biology. Combative, fearless and thought-provoking, *Aping Mankind* is an important book and one that scientists, cultural commentators and policy-makers cannot ignore. This Routledge Classics edition includes a new preface by the Author.

**Indian Art of the Americas at the Art Institute of Chicago** Richard F.

Townsend, 2016-06-28 A stunning survey of the indigenous art, architecture, and spiritual beliefs of the Americas, from the Precolumbian era to the 20th century. This landmark publication catalogues the Art Institute of Chicago's outstanding collection of Indian art of the Americas, one of the foremost of its kind in the United States. Showcasing a host of previously unpublished objects dating from the Precolumbian era to the 20th century, the book marks the first time these holdings have been comprehensively documented. Richard Townsend and Elizabeth Pope weave an overarching narrative that ranges from the Midwestern United States to the Yucatán Peninsula to the heart of South America. While exploring artists' myriad economic, historical, linguistic, and social backgrounds, the authors demonstrate that they shared both a deep, underlying cosmological view and the desire to secure their communities' prosperity by affirming connections to the sacred forces of the natural world. The critical essays focus on topics that bridge traditions across North, Central, and South America, including materials, methods of manufacture, the diversity of stylistic features, and the iconography and functions of various objects. Gorgeously illustrated in color with more than 500 vibrant images, this handsome catalogue serves as the definitive survey of an unparalleled collection.

*Seeing Ourselves* Raymond Tallis, 2020 In *Seeing Ourselves*, philosopher and neuroscientist Raymond Tallis goes in search of what kind of beings we are, and where we

might find meaning in our lives. Showcasing a remarkably detailed engagement with a huge range of disciplines, Tallis shows the unique nature of human consciousness.

**Construction Law** Julian Bailey, 2016-07-22 Now in its second edition, *Construction Law* is the standard work of reference for busy construction law practitioners, and it will support lawyers in their contentious and non-contentious practices worldwide. Published in three volumes, it is the most comprehensive text on this subject, and provides a unique and invaluable comparative, multi-jurisdictional approach. This book has been described by Lord Justice Jackson as a tour de force, and by His Honour Humphrey Lloyd QC as seminal and definitive. This new edition builds on that strong foundation and has been fully updated to include extensive references to very latest case law, as well as changes to statutes and regulations. The laws of Hong Kong and Singapore are also now covered in detail, in addition to those of England and Australia. Practitioners, as well as interested academics and post-graduate students, will all find this book to be an invaluable guide to the many facets of construction law.
