Non-market Strategies in International Business Vikrant Shirodkar, Roger Strange, Steven McGuire, 2019-12-21 The Academy of International Business (UK and Ireland Chapter) Published in association with the UK and Ireland Chapter of the Academy of International Business. This book provides theoretical and empirical insights into non-market political and social strategies that firms use when conducting international business. Political strategies include activities such as lobbying, campaign contributions, and using political ties and connections as a means of influencing policy making. Likewise, firms also engage in various social responsibility activities to maintain a good image in society and to improve their legitimacy and reputation when operating globally. Multinational enterprises (MNEs) face various challenges in implementing non-market strategies due to institutional differences between their home and host contexts. Presenting fresh perspectives from a cast of international contributors, this book offers academics, students, and practitioners a greater understanding of how non-market strategies can be effective in international business.

A Quest for Justice Mzukisi Ndara, 2021-10-01 It's a proverbial battle of David versus Goliath. A senior government employee has been embroiled in a bitter battle against one of the country's largest financiers, Wesbank. His Story is mired in alleged fraud, corruption and misconduct. The Grahamstown High Court this week dismissed with costs an appeal by Wesbank, a division of FirstRand – for the third time – against earlier rulings made in favour of Mzukisi Ndara. In the pursuit for justice, Ndara has approached several high-ranking politicians, Parliament as the custodian of the country's laws, the Hawks and the courts. But 15 years into the battle, the matter has yet to be resolved. And some dockets containing vital evidence have gone missing. Ndara has now turned to the Director of Public Prosecutions as a last resort. – Long and Winding Road for Justice: Bulelwa Payi; Weekend Argus, March 19, 2019 Based on your statement, together with police evidential material and the circumstances of this matter, Wesbank and or its employees breached the contract in the form of misrepresentations and acted in violation of various statutes as alluded to in your reports. – National Director of Public Prosecutions (NDPP) Advocate Shamila Batohi; September 24, 2019 Your story needs to be told for business and government to understand they can't keep turning a blind eye to their people who believe the end justifies the means regarding profit making. – Professor Thuli Madonsela; June 4, 2020 A seventeen year journey of sheer guts and resilience... - Dr Charity Hove October 6, 2021 It is

a baffling, bewildering and unsettling story best summarized by your insightful self-observation (Part One: page 31), 'my inner desire for truth'. You write with fluency and power, the first part of your account, embracing your earlier life, is amusing, wry, entertaining and in parts engrossing. The later parts make for more challenging reading, because of the anguish of the cumulating injustices, delays, lawyerly and institutional disingenuousness and evasions you suffered. Your account is truly a Dickensian tale of the law's delays and obscurities, of lawyers and journalists' evasions, with very occasional light points of courage, loyalty and competence. – Retired Constitutional Court Justice, Edwin Cameron, September 6, 202

Methods for Predicting the Aerodynamic and Stability and Control Characteristics of STOL Aircraft M. I. Goldhammer, N. F. Wasson, 1973 The report describes the STOL Aerodynamic Methods Computer Program, which is intended to aid the engineer in the design and analysis of STOL aircraft employing internally ducted jet flaps, externally blown jet flaps, and mechanical flap systems with vectored thrust. The program provides capabilities to predict either the overall aerodynamic characteristics of a configuration or the aerodynamics of the following: Jet-wing (in or out of ground effect); wing and vectored jets; fuselage in the flow field of the jet-wing and/or vectored jets; empennage in the flow field of the jet-wing and/or vectored jets. The program includes the capabilities for investigating the effects of arbitrary wing planforms with arbitrary high lift systems, including partial span flaps, slats, and jets; arbitrary camber, twist, and jet deflection; fuselages with arbitrary cross-sections and upsweep; arbitrary empennage arrangements, including conventional tails, mid-tails, and T-tails; and a capability to calculate the off-body flow field induced by the jet-wing and/or vectored at arbitrary points.

Introduction to Modern Dynamics David D. Nolte, 2019-09-18 The best parts of physics are the last topics that our students ever see. These are the exciting new frontiers of nonlinear and complex systems that are at the forefront of university research and are the basis of many high-tech businesses. Topics such as traffic on the World Wide Web, the spread of epidemics through globally-mobile populations, or how the synchronization of global economies are governed by universal principles just as profound as Newton's laws. Nonetheless, the conventional university physics curriculum reserves most of these topics for graduate study because of the assumed need for advanced mathematics. However, by using only linear algebra and calculus, combined with exploratory computer simulations, all of these topics become accessible to advanced undergraduate students. The structure of this book combines the three main topics of modern dynamics - chaos theory, dynamics on complex networks, and general relativity - into a coherent framework. By taking a geometric view of physics, concentrating on the time evolution of physical systems as trajectories through abstract spaces, these topics share a common and simple mathematical language through which any student can gain a unified physical intuition. Given the growing importance of complex dynamical systems in many areas of science and technology, this text provides students with an up-to-date

foundation for their future careers. This second edition has an updated introductory chapter and has added key topics to help students prepare for their GRE physics subject exam. It also has expanded chapters on Hamiltonian dynamics, Hamiltonian chaos, and Econophysics, while increasing the number of homework problems at the end of each chapter. The second edition is designed to fulfill the textbook needs of any advanced undergraduate course in mechanics.

Making Choices about Hydrogen Lynn Krieger Mytelka, Grant Boyle, 2008 Since the mid-1990s, the emergence of a hydrogen economy and the speed with which it will arrive have been vigorously debated. As a disruptive technology, dominant designs for the production, storage and distribution of hydrogen have not yet been established. Neither have performance characteristics been achieved to compete with the existing combustion engine, though the efficiency and durability of hydrogen fuel cells are improving. This publication highlights the uncertainties involved in making choices about hydrogen and fuel cells in planning the development policies

on national energy, environment and transport sector.--Publisher's description.
