Physics and Applications of Secondary Electron Emission H. Bruining,2016-01-11 Physics and Applications of Secondary Electron Emission provides a survey of the physics and applications of secondary electron emission. It is part of a series of monographs that aim to report on research carried out in electronics and applied physics. The monographs are written by specialists in their own subjects. Wherever it is practical the monographs will be kept short in length to enable all those interested in electronics to find the essentials necessary for their work in a condensed and concentrated form. The book begins with a discussion of secondary electrons. Separate chapters cover methods for measuring secondary electron emission; numerical results on the secondary electron emission yield of both metals and metal compounds; the influence of externally adsorbed foreign atoms and ions on secondary electron emission; and the mechanism of secondary electron emission. The final three chapters deal with the application side. These include the applications of electron multiplication; the elimination of disturbing effects due to secondary electrons; and storage devices in which information on electrical charges is written on an insulating surface, often by making use of secondary electron emission.

One-Volume Libraries: Composite and Multiple-Text Manuscripts Michael Friedrich,Cosima Schwarke,2016-11-07 Composite and multiple-text manuscripts are traditionally studied for their individual texts, but recent trends in codicology have paved the way for a more comprehensive approach: Manuscripts are unique artefacts which reveal how they were produced and used as physical objects. While multiple-text manuscripts codicologically are to be considered as production units, i.e. they were originally planned and realized in order to carry more than one text, composites consist of formerly independent codicological units and were put together at a later stage with intentions that might be completely different from those of its original parts. Both sub-types of manuscripts are still sometimes called miscellanies, a term relating to the texts only. The codicological difference is important for reconstructing why and how these manuscripts which in many cases resemble (or contain) a small library were produced and used. Contributions on the manuscript cultures of China, India, Africa, the Islamic world and European traditions lead not only to the conclusion that one-volume libraries have been produced in many manuscript cultures, but allow also for the identification of certain types of uses.

The Folktale Stith Thompson,1977 As interest in folklore increases, the folktale acquires greater significance for students and teachers of literature. The material is massive and scattered; thus, few students or teachers have accessibility to other than small segments or singular tales or material they find buried in archives. Stith Thompson has divided his book into four sections which permit both the novice and the teacher to examine oral tradition and its manifestation in folklore. The introductory section discusses the nature and forms of the folktale. A comprehensive second part traces the folktale geographically from Ireland to India, giving culturally diverse examples of the forms presented in the first part. The examples are followed by the analysis of several themes in such tales from North American Indian cultures. The concluding section treats theories of the folktale, the collection and classification of folk narrative, and then analyzes the living folklore process. This work will appeal to students of the sociology of literature, professors of comparative literature, and general readers interested in folklore.

Constantinopolis/Istanbul Çi-dem Kafescio_lu,2009 Studies the reconstruction of Byzantine Constantinople as the capital city of the Ottoman empire following its capture in 1453, delineating the complex interplay of socio-political, architectural, visual, and literary processes that underlay the city's transformation--Provided by publisher.

Ulucak Höyük Altan Çilingiroğlu,2004 Of the areas in Anatolia that have attested intensive Neolithic occupation,

the western region is the least understood, with systematic investigations barely two decades old. Information concerning the west-central sector around Izmir is particularly limited and underlines the significance of the results from Ulucak, an ancient mound site, and the first Neolithic site to be excavated in this part of Anatolia. The Neolithic settlement is superimposed by the debris of three other main cultural periods, providing an important sequence for the Izmir region. From top to bottom the periods are: Late Roman - Early Byzantine (Period I), Early Bronze Age II (Period II), Late Chalcolithic Age (Period III) and Late Neolithic (Period IV). Of these the Late Neolithic settlement is the most significant, attesting to influences from the Aegean, the Balkans and the Konya Plain. This volume presents the results to date of this multi-disciplinary project, ranging from palaeogeography, through stratigraphy and settlement plans to an analysis of the finds, focusing especially on the Late Neolithic.
