The New Frontier in Web API Programming Rick Mac Gillis,2016-07-09 Do you use a single API Call Processing Server? Worse yet, do you have all of your web servers making individual API calls all on their own? Just a single API transaction takes 9 steps to complete through TCP, and your system is getting bogged down with delays from TCP communications. The internet runs on HTTP, and HTTP runs on TCP. You could still use websockets to keep some of the overhead low. However, the TCP/IP stack is just one of many bottlenecks in your infrastructure. Did you know that you don't need to collect the response from every API call you make? What if you could always speak to every API in your format of choice? I'll show you how. In this book, you'll learn about how implementing an API Call Processing Server or cloud can dramatically reduce the time to transact with an API, reduce your web server overhead, and

make programming with APIs so much easier.

Corporate Responsibility and Digital Communities Georgiana Grigore, Alin Stancu, David McQueen, 2017-11-27 This book explores conceptualizations of CSR and sustainability in the digital economy, focusing upon points of intersection between CSR and online communities. Reflecting on new areas of responsibility that organisations must face in a globalised economy, the

contributions explore the ways CSR is being communicated, challenged and reshaped in a rapidly evolving online context. Up-to-date research from around the world shows how diverse communities, citizens and stakeholders are engaging with, and making demands on, organisations in novel ways that pay little respect to international borders. With online communities increasingly influencing the way in which business is carried out and perceived, the case studies explored here offer a useful indication of the variety of new developments and controversies that have emerged in the field of CSR. This book will appeal to postgraduate students and researchers of CSR and CSR communications, as well as communication, public relation and corporate responsibility practitioners.

Workplace Strategies and Facilities Management Rick Best, Gerard de Valence, Craig Langston, 2007-08-22 This book provides comprehensive coverage of issues that facility managers in the property industry need to understand and apply in the pursuit of value for money over the life span of built facilities. The authors introduce the fast-growing discipline of facility management, examine the core competencies that facility managers should possess and study different contemporary drivers of change. The book emphasises the need to consider facilities management issues at the pre-design stage of the construction process, rather than only when the building is completed, in order to maximise value for money.

Giftology John Ruhlin, 2016-06-20 Does it feel like you work in a red ocean filled with sharks? Eat or be eaten. Fierce competition. Continual battling over scarce resources. What if there was another path? What if you could create your own blue oasis where profits are higher, marketing is as natural as breathing, and competition is nearly nonexistent? This nirvana can be a

reality when you practice the principles of Giftology. In this unusual un-marketing resource you'll discover... *Why Giftology isn't an expense...it's an investment that can pay off with huge dividends. *How to practice Giftology on a tight budget... it's easy and very effective. *How Giftology turns existing clients into your best salespeople. *Why (and how) gifts with a relatively low value can trump something expensive. *When is the best time to send gifts? (The answer may surprise you.) *How to unleash a Referral Factory, a small army of influencers vouching for you--no gimmicks, no catches. *Find out how Giftology can transform your supply chain. *The ten worst gifts... definitely avoid these. (This info's available in the expanded bonus resource. Just click the link inside! It's my gift to you.) The average person is hit with at least thirty thousand messages a day, courtesy of that red ocean filled with sharks. Giftology neutralizes that deadly philosophy and equips you with every tool you need to make your message a priority. Every time. Get your copy today!

Brave Enough Kati Gardner, 2018-08-21 The lives of Cason Martin and Davis Channing intersect in a powerful way. Both are struggling to survive life-threatening diseases. Neither feels in control of their lives. Can they be brave enough to beat the odds?

Conquering Complexity Mike Hinchey, Lorcan Coyle, 2012-01-03 Software has long been perceived as complex, at least within Software Engineering circles. We have been living in a recognised state of crisis since the first NATO Software Engineering conference in 1968. Time and again we have been proven unable to engineer reliable software as easily/cheaply as we imagined. Cost overruns and expensive failures are the norm. The problem is fundamentally one of complexity: software is fundamentally complex because it must be

precise. Problems that appear to be specified quite easily in plain language become far more complex when written in a more formal notation, such as computer code. Comparisons with other engineering disciplines are deceptive. One cannot easily increase the factor of safety of software in the same way that one could in building a steel structure, for example. Software is typically built assuming perfection, often without adequate safety nets in case the unthinkable happens. In such circumstances it should not be surprising to find out that (seemingly) minor errors have the potential to cause entire software systems to collapse. The goal of this book is to uncover techniques that will aid in overcoming complexity and enable us to produce reliable, dependable computer systems that will operate as intended, and yet are produced on-time, in budget, and are evolvable, both over time and at run time. We hope that the contributions in this book will aid in understanding the nature of software complexity and provide guidance for the control or avoidance of complexity in the engineering of complex software systems.
