Players Making Decisions Zack Hiwiler, 2015-12-09 Game designers today are expected to have an arsenal of multi-disciplinary skills at their disposal in the fields of art and design, computer programming, psychology, economics, composition, education, mythology—and the list goes on. How do you distill a vast universe down to a few salient points? *Players Making Decisions* brings together the wide range of topics that are most often taught in modern game design courses and focuses on the

core concepts that will be useful for students for years to come. A common theme to many of these concepts is the art and craft of creating games in which players are engaged by making meaningful decisions. It is the decision to move right or left, to pass versus shoot, or to develop one's own strategy that makes the game enjoyable to the player. As a game designer, you are never entirely certain of who your audience will be, but you can enter their world and offer a state of focus and concentration on a task that is intrinsically rewarding. This detailed and easy-to-follow guide to game design is for both digital and analog game designers alike and some of its features include: A clear introduction to the discipline of game design, how game development teams work, and the game development process Full details on prototyping and playtesting, from paper prototypes to intellectual property protection issues A detailed discussion of cognitive biases and human decision making as it pertains to games Thorough coverage of key game elements, with practical discussions of game mechanics, dynamics, and aesthetics Practical coverage of using simulation tools to decode the magic of game balance A full section on the game design business, and how to create a sustainable lifestyle within it

Storyplaying Sebastian Domsch,2013-08-28 Incontestably, Future Narratives are most conspicuous in video games: they combine narrative with the major element of all games: agency. The persons who perceive these narratives are not simply readers or spectators but active agents with a range of choices at their disposal that will influence the very narrative they are experiencing: they are players. The narratives thus created are realizations of the multiple possibilities contained in the present of any given gameplay situation. Surveying the latest trends in the field, the volume discusses the complex relationship of narrative and gameplay.

They divide games broadly into, games of pure skill, such as hopscotch and target shooting; games of pure strategy, such as checkers, go, or tic-tac-toe; and games of chance, such as craps and snakes and ladders.
