Global Entertainment Media Tanner Mirrlees, 2013 A critical cultural materialist introduction to the study of global entertainment media. In *Global Entertainment Media*, Tanner Mirrlees undertakes an analysis of the ownership, production, distribution, marketing, exhibition and consumption of global films and television shows, with an eye to political economy and cultural studies. The governance of global entertainment media: state and inter-state media and cultural policies and regulations that govern the production, distribution and exhibition of entertainment media and enable or impede its cross-border flow. The new international division of cultural labor (NICL): the cross-border production of entertainment by cultural workers in asymmetrically interdependent media capitals, and economic and cultural concerns surrounding runaway productions and co-productions. The economic motivations and textual design features of globally popular entertainment forms such as blockbuster event films, TV formats, glocalised lifestyle brands and synergistic media.

Molecular Evolution Roderick D.M. Page,Edward C.

Holmes,2009-07-14 The study of evolution at the molecular level has given the subject of evolutionary biology a new significance. Phylogenetic 'trees' of gene sequences are a

powerful tool for recovering evolutionary relationships among species, and can be used to answer a broad range of evolutionary and ecological questions. They are also beginning to permeate the medical sciences. In this book, the authors approach the study of molecular evolution with the phylogenetic tree as a central metaphor. This will equip students and professionals with the ability to see both the evolutionary relevance of molecular data, and the significance evolutionary theory has for molecular studies. The book is accessible yet sufficiently detailed and explicit so that the student can learn the mechanics of the procedures discussed. The book is intended for senior undergraduate and graduate students taking courses in molecular evolution/phylogenetic reconstruction. It will also be a useful supplement for students taking wider courses in evolution, as well as a valuable resource for professionals. First student textbook of phylogenetic reconstruction which uses the tree as a central metaphor of evolution. Chapter summaries and annotated suggestions for further reading. Worked examples facilitate understanding of some of the more complex issues. Emphasis on clarity and accessibility.

Rhythmic Stimulation Procedures in Neuromodulation James R. Evans, Robert Turner, 2017-06-24 Rhythmic Stimulation Procedures in Neuromodulation offers a unique approach to rhythm-related stimulation as it pertains to modulating neural functioning, with the goal of alleviating symptoms of mental disorder. Rhythm and related concepts (frequency, resonance, entrainment) are thought by many to be closely linked to human health and disease. Neurologists and clinical psychologists facilitate neuroplasticity by using pulsed (rhythmic) sensory or electromagnetic stimulation—a group of techniques broadly referred to as neuromodulation. This edited volume describes details of rhythm-related neuromodulation techniques, and experts in the field have detailed the pros and cons of each approach, citing both clinical and scientific support. Each technique chapter provides a detailed description of the procedure, a rationale for application with specific populations, discussion of similarities/differences relative to other approaches, and support for efficacy. This volume offers readers a historical overview of the roles of rhythm and dysrhythmia in health and disease, including examples of

past and present therapeutic uses of rhythmic stimulation, entrainment, and/or modification. It also facilitates speculation about potential developments in rhythm-related methods for the future of mental health. Few books published in the general area of rhythm have focused on the scientific study of the significance of biological rhythms. Discusses features of the generally unknown early history of using rhythmic stimulation procedures in treating various disorders Provides an overview of the extent to which rhythmic stimulation of various types are basic to the majority of alternative and complementary medicine fields Provides details of several of today's more commonly used stimulation techniques for neuromodulation, discussing the theoretical foundations and limitations of each, and providing clinical and scientific research evidence for their treatment efficacy in specific applications Discusses current directions in which stimulation techniques are moving and speculates on the promise they hold for major changes in mental health care

Music Is My Life Daniel Stein, 2012-05-03 *Music Is My Life* is the first comprehensive analysis of Louis Armstrong's autobiographical writings (including his books, essays, and letters) and their relation to his musical and visual performances. Combining approaches from autobiography theory, literary criticism, intermedia studies, cultural history, and musicology, Daniel Stein reconstructs Armstrong's performances of his life story across various media and for different audiences, complicating the monolithic and hagiographic views of the musician. The book will appeal to academic readers with an interest in African American studies, jazz studies, musicology, and popular culture, as well as general readers interested in Armstrong's life and music, jazz, and twentieth-century entertainment. While not a biography, it provides a key to

understanding Armstrong's oeuvre as well as his complicated place in American history and twentieth-century media culture.
