The Great Acceleration Robert Colvile, 2016-05-17 The Great Acceleration is an energizing account from a brilliant new writer of how our society is speeding up--and why we should embrace it. In this revelatory study of modern living, Robert Colvile inspects the various ways in which the pace of life in our society is increasing and examines the evolutionary science behind our rapidly accelerating need for change, as well as why it's unlikely we'll be able to slow down . . . or even want to. Exploring theories surrounding the effect of this speed on our minds and bodies, Colvile reveals how, contrary to gloomier predictions, living in a faster age might be beneficial for us, both physically and mentally. In addition to the universe of social media, he examines the opportunities that faster communication and operation could bring to everything from music, film, and books to transportation, politics, and government. Comparing developments in cities and villages, advanced economies and underdeveloped countries, East and West, The Great Acceleration explains how the positives outnumber the negatives and, if this acceleration is truly inevitable, why we should rush to embrace it.

New Business and Regulatory Strategies in the Postal Sector Pier Luigi Parcu, Timothy J. Brennan, Victor Glass, 2019-02-13 This book addresses major issues facing postal and delivery services throughout the world. Worldwide, there is currently a considerable amount of interest in postal and delivery economics. The industry is reacting to a state of near crisis and is implementing different drastic changes. The European Commission and member States are still wrestling with the problem of how to implement entry liberalization into postal markets, how to address digital competition, and how to maintain the universal service obligation (USO). The Postal Accountability and Enhancement Act of 2006 in the U.S. has perhaps created and exacerbated the problems faced by USPS. Digitalisation, technological development and online platforms are strongly affecting both the way postal and delivery operators are managing their services as well as their role on the market. Strong emphasis was attributed to the assets of Postal Operators (POs) and their added value in the digital age as well as on new business strategies. This volume presents original essays by prominent researchers in the field, selected and edited from papers presented at this year's 26th Conference on Postal and Delivery Economics held in Split, Croatia, from May 30- June 2, 2018. Topics addressed by this volume include quality of service, last mile solutions, and competition in the liberalized market. This book will be a useful tool not only for graduate students and professors, but also for postal administrations, consulting firms, and federal government departments.

The Design of Urban Manufacturing Robert N. Lane, Nina Rappaport, 2020-03-13 American cities are rediscovering the economic and social value of urban manufacturing. However, urban manufacturing is often invisible and poorly understood in terms of urban design, architecture, and policy. The Design of Urban Manufacturing brings a multidisciplinary approach to a new complex reality that urban manufacturing now sits squarely at the intersection of research, education, and neighborhood revitalization. Using cases studies from across North America and beyond, this book presents innovative

approaches not only to the design of districts and buildings, but to the design of policy as well: the special roles that governments, local development corporations, and not-for-profit organizations all have to play in supporting manufacturing. This book presents current models for working neighborhoods where factories enable fine-grained, mixed-use communities and face-to-face contact while creatively solving the very real problems of goods movement and functional buildings. Design guidelines and policy recommendations are calibrated to different types of production districts. The Design of Urban Manufacturing is the essential resource for policy makers, designers, and students in urban design, planning, and urban and economic development.

The Future of the Postal Sector in a Digital World Michael Crew, Timothy J. Brennan, 2015-11-28 Worldwide, postal operators have been slow to address the threats from and opportunities created by electronic competition. The European Commission and member states are wrestling with these issues, while at the same time continuing to deal with the interrelated issues of implementing entry into postal markets and maintaining the universal service obligation. The Postal Accountability and Enhancement Act of 2006 in the U.S. exacerbated financial and managerial problems faced by USPS that result in part from electronic substitution for letter delivery. A major aim of this book is to examine policies to address postal operations in a digital world and ways in which postal operators might reinvent themselves to respond to threats and exploit opportunities. Potential opportunities examined include parcels, e-commerce, digital delivery, regulatory innovations and pricing. This book will be of interest to postal operators, regulatory commissions, consulting firms, competitors and customers, experts in the postal economics, law, and business, and those charged with the responsibility for designing and implementing postal sector policies. Researchers in regulatory economics, transportation technology and industrial organization will also find considerable food for thought in this volume.
