Music, Sound and Multimedia Jamie Sexton, 2007-11-14 This new series aims to explore the area of "screen music". Volume topics will include multimedia music, music and television, Hollywood film music, and the music of Bollywood cinema. Music and other sound effects have been central to a whole host of media forms throughout the twentieth century, either as background, accompaniment, or main driving force. Such interactions will continue to mutate in new directions, with the widespread growth of digital technologies. Despite the expansion of research into the use of music and sound in film, the investigation of sonic interactions with other media forms has been a largely under-researched area. Music, Sound and Multimedia provides a unique study of how music and other sounds play a central part in our understandings and uses of a variety of communications media. It focuses on four areas of sound and music within broader multimedia forms - music videos, video game music, performance and presentation, and production and consumption - and addresses the centrality of such aural concerns within our everyday experiences. Charting historical developments, mapping contemporary patterns, and speculating on future possibilities, this book is essential for courses on sound and media within media and communications studies, cultural studies and popular music studies. Key features* Charts a number of key developments in music and multimedia interactions* Provides both historical overviews and theoretical analyses* Features a number of in-depth case studies of important issues.

Audio Signal Processing for Next-Generation Multimedia Communication Systems Yiteng (Arden) Huang, Jacob Benesty, 2007-05-08 Audio Signal Processing for Next-Generation Multimedia Communication Systems presents cutting-edge digital signal processing theory and implementation techniques for problems including speech acquisition and enhancement using microphone arrays, new adaptive filtering algorithms, multichannel acoustic echo cancellation, sound source tracking and separation, audio coding, and realistic sound stage reproduction. This book's focus is almost exclusively on the processing, transmission, and presentation of audio and acoustic signals in multimedia communications for telecollaboration where immersive acoustics will play a great role in the near future.

MPEG-7 Audio and Beyond HyounG-Gook Kim, Nicolas Moreau, Thomas Sikora, 2006-02-03 Advances in technology, such as MP3 players, the Internet and DVDs, have led to the production, storage and distribution of a wealth of audio signals, including speech, music and more general sound signals and their combinations. MPEG-7 audio tools were created to enable the navigation of this data, by providing an established framework for effective multimedia

management. MPEG-7 Audio and Beyond: Audio Content Indexing and Retrieval is a unique insight into the technology, covering the following topics: the fundamentals of MPEG-7 audio, principally low-level descriptors and sound classification and similarity; spoken content description, and timbre, melody and tempo music description tools; existing MPEG-7 applications and those currently being developed; examples of audio technology beyond the scope of MPEG-7. Essential reading for practising electronic and communications engineers designing and implementing MPEG-7 compliant systems, this book will also be a useful reference for researchers and graduate students working with multimedia database technology.

Audio in Media Stanley R. Alten, 1999 In AUDIO IN MEDIA, Eighth Edition, Stanley Alten-internationally recognized as a scholar and expert in the area of audio production-continues to provide students with an introduction to the basic techniques and principles needed for today's audio production in media. The clear and current illustrations and photos and student-friendly writing in Alten's market-leading text have helped professors effectively teach this technically-based course to thousands of introductory audio production students. Multimedia Information Extraction Mark T. Maybury, 2012-07-11 The advent of increasingly large consumer collections of audio (e.g., iTunes), imagery (e.g., Flickr), and video (e.g., YouTube) is driving a need not only for multimedia retrieval but also information extraction from and across media. Furthermore, industrial and government collections fuel requirements for stock media access, media preservation, broadcast news retrieval, identity management, and video surveillance. While significant advances have been made in language processing for information extraction from unstructured multilingual text and extraction of objects from imagery and video, these advances have been explored in largely independent research communities who have addressed extracting information from single media (e.g., text, imagery, audio). And yet users need to search for concepts across individual media, author multimedia artifacts, and perform multimedia analysis in many domains. This collection is intended to serve several purposes, including reporting the current state of the art, stimulating novel research, and encouraging cross-fertilization of distinct research disciplines. The collection and integration of a common base of intellectual material will provide an invaluable service from which to teach a future generation of cross disciplinary media scientists and engineers.

Audio Technology, Music, and Media Julian Ashbourn, 2020-12-14 This book provides a true A to Z of recorded sound, from its inception to the present day, outlining how technologies, techniques, and social attitudes have changed things, noting what is good and what is less good. The author starts by discussing the physics of sound generation and propagation. He then moves on to outline the history of recorded sound and early techniques and technologies, such as the rise of multi-channel tape recorders and their impact on recorded sound. He goes on to debate live sound versus recorded sound and why there is a difference, particularly with classical music. Other topics covered are the sound of real instruments and how that sound is produced and how to record it; microphone

techniques and true stereo sound; digital workstations, sampling, and digital media; and music reproduction in the home and how it has changed. The author wraps up the book by discussing where we should be headed for both popular and classical music recording and reproduction, the role of the Audio Engineer in the 21st century, and a brief look at technology today and where it is headed. This book is ideal for anyone interested in recorded sound.

"[Julian Ashbourn] strives for perfection and reaches it through his recordings... His deep knowledge of both technology and music is extensive and it is with great pleasure that I see he is passing this on for the benefit of others. I have no doubt that this book will be highly valued by many in the music industry, as it will be by me." -- Claudio Di Meo, Composer, Pianist and Principal Conductor of The Kensington Philharmonic Orchestra, The Hemel Symphony Orchestra and The Lumina Choir

Audio Signal Processing for Next-Generation Multimedia Communication Systems Yiteng (Arden) Huang, Jacob Benesty, 2004-03-31 Audio Signal Processing for Next-Generation Multimedia Communication Systems presents cutting-edge digital signal processing theory and implementation techniques for problems including speech acquisition and enhancement using microphone arrays, new adaptive filtering algorithms, multichannel acoustic echo cancellation, sound source tracking and separation, audio coding, and realistic sound stage reproduction. Podcasting Martin Spinelli, Lance Dann, 2019-01-10 Born out of interviews with the producers of some of the most popular and culturally significant podcasts to date (Welcome to Night Vale, Radiolab, Serial, The Black Tapes, We're Alive, The Heart, The Truth, Lore, Love + Radio, My Dad Wrote a Porno, and others) as well as interviews with executives at some of the most important podcasting institutions and entities (the BBC, Radiotopia, Gimlet Media, Audible.com, Edison Research, Libsyn and others), Podcasting documents a moment of revolutionary change in audio media. The fall of 2014 saw a new iOS from Apple with the first built-in "Podcasts" app, the runaway success of Serial, and podcasting moving out of its geeky ghetto into the cultural mainstream. The creative and cultural dynamism of this moment, which reverberates to this day, is the focus of Podcasting. Using case studies, close analytical listening, quantitative and qualitative analysis, production analysis, as well as audience research, it suggests what podcasting has to contribute to a host of larger media-and-society debates in such fields as: fandom, social media and audience construction; new media and journalistic ethics; intimacy, empathy and media relationships; cultural commitments to narrative and storytelling; the future of new media drama; youth media and the charge of narcissism; and more. Beyond describing what is unique about podcasting among other audio media, this book offers an entry into the new and evolving field of podcasting studies.

Delivering MPEG-4 Based Audio-Visual Services Hari Kalva, 2006-04-11 Delivering MPEG-4 Based Audio-Visual Services investigates the different aspects of end-to-end multimedia services; content creation, server and service provider, network, and the end-user terminal. Part I provides a comprehensive introduction to digital video communications, MPEG standards, and technologies, and deals with system level issues including

standardization and interoperability, user interaction, and the design of a distributed video server. Part II investigates the systems in the context of object-based multimedia services and presents a design for an object-based audio-visual terminal, some of these features having been adopted by the MPEG-4 Systems specification. The book goes on to study the requirements for a file format to represent object-based audio-visual content and the design of one such format. The design introduces new concepts such as direct streaming that are essential for scalable servers. The final part of the book examines the delivery of object-based multimedia presentations and gives optimal algorithms for multiplex-scheduling of object-based audio-visual presentations, showing that the audio-visual object scheduling problem is NP-complete in the strong sense. The problem of scheduling audio-visual objects is similar to the problem of sequencing jobs on a single machine. The book compares these problems and adapts job-sequencing results to audio-visual object scheduling, and provides optimal algorithms for scheduling presentations under resource constraints, such as bandwidth (network constraints) and buffer (terminal constraints). In addition, the book presents algorithms that minimize the resources required for scheduling presentations and the auxiliary capacity required to support interactivity in object-based audio-visual presentations. Delivering MPEG-4 Based Audio-Visual Services is essential reading for researchers and practitioners in the areas of multimedia systems engineering and multimedia computing, network professionals, service providers, and all scientists and technical managers interested in the most up-to-date MPEG standards and technologies.

The Psychology of Music in Multimedia Siu-Lan Tan, Annabel J. Cohen, Scott D. Lipscomb, Roger A. Kendall, 2013-06-27 For most of the history of film-making, music has played an integral role serving many functions - such as conveying emotion, heightening tension, and influencing interpretation and inferences about events and characters. More recently, with the enormous growth of the gaming industry and the Internet, a new role for music has emerged. However, all of these applications of music depend on complex mental processes which are being identified through research on human participants in multimedia contexts. The Psychology of Music in Multimedia is the first book dedicated to this fascinating topic. The Psychology of Music in Multimedia presents a wide range of scientific research on the psychological processes involved in the integration of sound and image when engaging with film,

television, video, interactive games, and computer interfaces. Collectively, the rich chapters in this edited volume represent a comprehensive treatment of the existing research on the multimedia experience, with the aim of disseminating the current knowledge base and inspiring future scholarship. The focus on empirical research and the strong psychological framework make this book an exceptional and distinctive contribution to the field. The international collection of contributors represents eight countries and a broad range of disciplines including psychology, musicology, neuroscience, media studies, film, and communications. Each chapter includes a comprehensive review of the topic and, where appropriate, identifies models that can be empirically tested. Part One presents contrasting theoretical approaches from cognitive psychology, philosophy, semiotics, communication, musicology, and neuroscience. Part Two reviews research on the structural aspects of music and multimedia, while Part Three focuses on research examining the influence of music on perceived meaning in the multimedia experience. Part Four explores empirical findings in a variety of real-world applications of music in multimedia including entertainment and educational media for children, video and computer games, television and online advertising, and auditory displays of information. Finally, the closing chapter in Part Five identifies emerging themes and points to the value of broadening the scope of research to encompass multisensory, multidisciplinary, and cross-cultural perspectives to advance our understanding of the role of music in multimedia. This is a valuable book for those in the fields of music psychology and musicology, as well as film and media studies.
