**Invisible Engines** David S. Evans 2008-02-15 Harnessing the power of software platforms: what executives and entrepreneurs must know about how to use this technology to transform industries and how to develop the strategies that will create value and drive profits. Software platforms are the

invisible engines that have created, touched, or transformed nearly every major industry for the past quarter century. They power everything from mobile phones and automobile navigation systems to search engines and web portals. They have been the source of enormous value to consumers and helped some entrepreneurs build great fortunes. And they are likely to drive change that will dwarf the business and technology revolution we have seen to this point. Invisible Engines examines the business dynamics and strategies used by firms that recognize the transformative power unleashed by this new revolution—a revolution that will change both new and old industries. The authors argue that in order to understand the successes of software platforms, we must first understand their role as a technological meeting ground where application developers and end users converge. Apple, Microsoft, and Google, for example, charge developers little or nothing for using their platforms and make most of their money from end users; Sony PlayStation and other game consoles, by contrast, subsidize users and make more money from developers, who pay royalties for access to the code they need to write games. More applications attract more users, and more users attract more applications. And more applications and more users lead to more profits. Invisible Engines explores this story through the lens of the companies that have mastered this platform-balancing act. It offers detailed studies of the personal computer, video game console, personal digital assistant, smart mobile phone, and digital media software platform industries, focusing on the business decisions made by industry players to drive profits and stay a step ahead of the competition. Shorter discussions of Internet-based software platforms provide an important glimpse into a future in which the way we buy, pay, watch, listen, learn, and communicate will change forever. **Handbook on the Economics of Leisure** Samuel Cameron 2011-01-01 This

interdisciplinary Handbook combines both mainstream and heterodox economics to assess the nature, scope and importance of leisure activities. Surprisingly, the field of leisure economics is not, thus far, a particularly integrated or coherent one. In this Handbook a wide ranging body of international scholars get to grips with the core issues, taking in the traditional income/leisure choice model of textbook microeconomics and Becker's allocation of time model along the way. They expertly apply economics to some usually neglected topics, such as boredom and sleeping, work-life balance, dating, tourism, health and fitness, sport, video games, social networking, music festivals and sex. Contributions from further afield by Veblen, Sctivosky and Bourdieu also feature prominently. Applying a mix of both theoretical and empirical data, undergraduate students in modules on sport/leisure economics as well as sport/leisure management will find this important resource invaluable.

**History of Computing in Education** J.A.N. Lee  
2006-04-11 This work derives from a conference discussing the history of computing in education. This conference is the first of hopefully a series of conferences that will take place within the International Federation for Information Processing (IFIP) and hence, we describe it as the First Conference on the History of Computing in Education (HCE1). These proceedings represent a collection of works presented at the HCE1 Conference held in association with the IFIP 2004 World Computer Congress held in Toulouse, France. Contributions to this volume range from a wide variety of educational perspectives and represent activities from four continents. The HCE1 conference represents a joint effort of the IFIP Working Group 9.7 on the History of Computing and the IFIP Technical Committee 3 on Education. The HCE1 Conference brings to light a broad spectrum of issues and spans four continents. It illustrates topics in computing education as they occurred in the "early days" of computing whose ramifications or overtones remain with us today. Indeed, many of the early challenges remain part of our educational tapestry; most likely, many will evolve into future challenges. Therefore, this work provides additional value to the reader as it will reflect in part the future development of computing in education to stimulate new ideas and models in educational development.

**Staging Solidarity** Tanya Goodman 2015-11-17 The South African Truth and Reconciliation Commission (TRC) is a modern social drama that enabled the nation's apartheid past to be constructed as a cultural trauma, and by doing so created a new collective narrative of diversity and inclusion. The TRC relied primarily on testimonies from victims and perpetrators of apartheid violence who came forward to tell their stories in a public forum. Rather than simply serving as data for setting the historical record straight, this book shows that it was not only the content of these testimonies but also how these stories were told and what values were attached to them that became significant. Goodman argues that the performative nature of the TRC process effectively designated the past as profane and simultaneously imagined a sacred future community based on democratic idealism and universal solidarity.

**Restoring Your Historic House** Scott T. Hanson 2023-06-01 Although there are other books about

renovating old houses, this is the first that prioritizes the identification and preservation of the historic, character-defining features of a house as a starting point in the process. That is the purpose of this book: to describe and illustrate a best-practices approach for updating historic homes for modern life in ways that do not attempt to turn an old house into a new one. The book also suggests many ways to save money in the process, without settling for cheap or inappropriate solutions. He has illustrated this authoritative book with hundreds of step-by-step photos, illustrations, charts, and decision-making guides. Interspersed throughout are photo essays of 13 restored historic houses representing a range of periods and architectural styles: Italianate, Victorian, Queen Anne, Federal, Colonial, Colonial Revival, Greek Revival, Ranch, Adobe, Craftsman, Shingle, and Rustic. With interior and exterior photography by David Clough, these multi-page features show what can be achieved when a historic home is renovated with a desire to preserve or restore as much historic character as possible.

**Policing** Rohit Choudhary 2018-06-30 A first-of-its-kind, this book proposes a marketing plan for the police, using the conventional framework of marketing management. While there is considerable discussion and criticism of the way the police force functions in India, no comprehensive alternative model has been proposed to implement the New Police Management (NPM) approach in the force's operations. In fact, the necessity for overhauling the police system is strongly felt all over the world in the light of the recent international security lapses. The framework that this book suggests comprises current situation analysis, SWOT

analysis, STP analysis and the 8 Ps. Policing: Reinvention Strategies in a Marketing Framework combines marketing principles with the empirical knowledge of police operations to suggest improvements in the Indian police force. It uses the marketing motto of 'keeping the customer at the centre' as key to finding solutions to the issues that the police face in their everyday operations. In addition, it carries case studies related to police operations from across the world and suggests ways of adapting the strategies used in these to the Indian context. In doing so, the book offers valuable inputs for police academies, public administration, public policy, and state security commissions, as it not only analyses the current situation in the police force, but also draws a clear and practicable roadmap to revamp it.
