Software Architecture 1 Mourad Chabane Oussalah,2014-05-09 Over the past 20 years, software architectures have significantly contributed to the development of complex and distributed systems. Nowadays, it is recognized that one of the critical problems in the design and development of any complex software system is its architecture, i.e. the organization of its architectural elements. *Software Architecture* presents the software architecture paradigms based on objects, components, services and models, as well as the various architectural techniques and methods, the analysis of architectural qualities, models of representation of architectural templates and styles, their formalization, validation and testing and finally the engineering approach in which these consistent and autonomous elements can be

tackled.

Software Development by LL (1) Syntax Description Johan Lewi, Karel de Vlaminck, Eric Steegmans, Ivo Van Horebeek, 1992-05-12 Using a conceptual and practical approach, it explains a method for syntax-directed program development based on LL(1) and extended LL(1) parsing strategies resulting in a series of so-called generation schemes with increasing complexity. Each scheme defines the mechanical transformation from translation syntaxes to transducers such as interpreters and compilers. The final generation scheme forms the basis of a commercial tool for program development (MIRA). Focusing on general methodology rather than specific implementation techniques, it includes numerous case studies that utilize modern methods of software engineering including specifications, information hiding, data encapsulation and modular design. Also features strategies and generation capabilities of error recovery.

Software Process Technology Finland) Ewspt 200 (2003 Helsinki, 2003-08-14
This book constitutes the refereed proceedings of the 9th European Workshop on Software Process Technology, EWSPT 2003, held in Helsinki, Finland in September 2003. The 12 revised full papers presented together with an extended abstract of an invited talk were carefully reviewed and selected from 25 submissions. Among the issues addressed are process modeling languages; computer-supported process description, analyses, reuse, refinement, and enactment; process monitoring, measurement, management, improvement, and evolution; and process enactment engines, tools, and environments.

Information System Development Process N. Prakash, C. Rolland, B. Pernici, 2014-06-28 This volume aims to pave the way to a greater understanding of the information system development process. Traditionally, information systems have been perceived as a slice of real world history. This has led to a strong emphasis on the development of conceptual models, the requirements specifications of which can readily be expressed. However, the route to such an expression, or the process of development, has not received any substantial attention. It is now agreed that a study of the development process affords notable benefits. Firstly, it helps to create an understanding of what a realistic development process is and how it proceeds from an initial specification to its acceptable representation. Secondly, the nature of guidance that can be provided by the next generation of CASE tools can be substantially improved. It can be expected that these tools will cease to be mere drafting aids and consistency checking programs. Instead it is likely that they will provide a procreative environment in which the development engineer will play an important role. This tool/user symbiosis should have a beneficial impact on both the productivity of the developer and on the quality of the product. In bringing together researchers and practitioners from such diverse areas as AI, Software Engineering, Decision Support and Information Systems, it is hoped this publication will take the quest to comprehend information system development processes a significant step forwards.

Interoperability of Enterprise Software and Applications Dimitri Konstantas,Jean-Paul Bourrières,Michel Léonard,Nacer Boudjlida,2006-07-04 Interoperability: the ability of a system or a product to work with other systems or products without special effort from the user is a key issue in manufacturing and industrial enterprise generally. It is fundamental to the production of goods and services quickly and at low cost at the same time as maintaining levels of quality and customisation. Composed of 40 papers of international authorship, Interoperability of Enterprise Software and Applications ranges from academic research through case studies to industrial experience of interoperability. Many of the papers have examples and illustrations calculated to deepen understanding and generate new ideas. A concise reference to the state of the art in software interoperability, Interoperability of Enterprise Software and Applications will be of great value to engineers and computer scientists working in manufacturing and other process industries and to software engineers and electronic and manufacturing engineers working in the academic environment.
