**Microvascular Research: Biology and Pathology, Two-Volume Set** David Shepro,2005-11-03 The microvasculature refers to the smallest blood vessels, arterial and venous, that nurture the tissues of each organ. Apart from transport, they also contribute to the systematic regulation of the body. In everyday terminology, the microcirculation is where the action is. Microcirculation is directly involved in such disease states as Alzheimers, inflammation, tumor growth, diabetic retinopathy, and wound healing- plus cardiovascular fitness is directly related to the formation of new capillaries in large muscles. Microvascular Research is the first book devoted exclusively to this vital systemic component of the cardiovascular system and provides up to date mini-reviews of normal functions and clinical states. The contributing authors are senior scientists with international reputation in their given disciplines. This two-volume set is a broad, interdisciplinary work that encompasses basic research and clinical applications equally. \* Broad coverage of both basic and clinical aspects of microvasculature research \* Contains 167 chapters from over 300 international authors \* Each chapter includes key figures and annotated references

The Routledge Companion to Research in the Arts Michael Biggs,Henrik Karlsson,2010-10-04 The Routledge Companion to Research in the Arts is a major collection of new writings on research in the creative and performing arts by leading authorities from around the world. It provides theoretical and practical approaches to identifying, structuring and resolving some of the key issues in the debate about the nature of research in the arts which have surfaced during the establishment of this subject over the last decade. Contributions are located in the contemporary intellectual environment of research in the arts, and more widely in the universities, in the strategic and political environment of national research funding, and in the international environment of trans-national cooperation and communication. The book is divided into three principal sections - Foundations, Voices and Contexts - each with an introduction from the editors highlighting the main issues, agreements and debates in each section. The Routledge Companion to Research in the Arts addresses a wide variety of concepts and issues, including: the diversity of views on what constitutes arts-based research and scholarship, what it should be, and its potential contribution the trans-national communication difficulties arising from terminological and ontological differences in arts-based research traditional and non-traditional concepts of knowledge, their relationship to professional practice, and their outcomes and audiences a consideration of the role of written, spoken and artefact-based languages in the formation and communication of understandings. This comprehensive collection makes an original and significant contribution to the field of arts-based research by setting down a framework for addressing these, and other, topical issues. It will be essential reading for research managers and policy-makers in research councils and universities, as well as individual researchers, research supervisors and doctoral candidates.

**Iron Metabolism** Robert Crichton,2009-02-25 Iron is of fundamental importance to the growth, development and well-being of almost all living organisms. Multiple biological systems have evolved for the uptake, utilisation, storage, and homeostasis of iron in microbes, plants and mammals. Both iron deficiency and iron overload are found extensively in humans; the intimate links between iron and oxidative stress are associated with a wide range of pathologies. Iron has a well established role in infections by a range of microorganisms and parasites. Other metals such as copper and zinc are also closely linked with iron metabolism. Iron overloads and deficiencies are important factors in the health of humans and are therefore a key target in drug development. Iron Metabolism: From Molecular Mechanisms to Clinical Consequences, 3rd Edition presents a comprehensive overview of this important field. Topics covered include: Solution chemistry of iron in biological media The importance of iron for biological systems Microbial iron transport and metabolism Iron uptake by plants and fungi Cellular iron uptake and export in mammals Intracellular iron storage and biomineralization Intracellular iron metabolism and cellular iron homeostasis Iron absorption in mammals, with particular reference to man, and regulation of systemic iron balance Pathophysiology of iron deficiency and iron overload in man Iron and oxidative stress Brain iron homeostasis and its perturbation in various neurodegenerative diseases Interactions between iron and other metals Written in a lively style by one of the leaders in the field and presented in full colour, this third, expanded edition of Iron Metabolism has been fully updated with the latest discoveries. Major additions include recent information on mitochondrial iron metabolism and the role of frataxin; transcriptional control of iron homeostasis; orally active iron chelators; the roles of hepcidin and erythropoietin; the increasing number of types of iron overload; and the importance of iron in Alzheimer's disease. Iron Metabolism is essential reading for researchers and students in biochemistry, molecular biology, microbiology, cell biology, nutrition and the medical sciences. It will also find space on the bookshelves of bioinorganic chemists with an interest in iron metabolism, health professionals with an interest in diseases of iron metabolism, and pharmacologists in the pharmaceutical industry interested in developing novel iron-binding drugs.

**Pharmacological Perspectives of Toxic Chemicals and Their Antidotes** S.J.S. Flora,James A. Romano,Steven I. Baskin,K. Sekhar,2004-09-10 This is the first book on toxic chemicals that puts a special focus on chemical weapons and bioterrorism. Leading experts provide up-to-date pharmacological and toxicological information on chemical warfare agents, industrial chemicals, environmental toxins, metalloids and an array of miscellaneous agents including their mechanism of toxicity. Also discussed are a number of antidotes, which are being used, or currently being investigated, for the treatments of the common toxicants.

**Give to the Heart - Memories Vol.1** WANN,2019-05-15 Brilliant scientists have always existed ahead of their time. Just give them the necessary resources, and they create miracles. On the colonized world of Mars, Dr. Ano, her assistant Chio, and their friend Ganok existed as gods, joined as one in a technological union with the supercomputer Margot. They formed a trio of immortal Demon Kings who determined the fate of all life on that planet. But long ago, they lived as normal humans on Earth. They went to school

together and bonded through shared hardships. They even experienced love. All the while, the powers-that-be kept a nervous eye on Ano's dangerous research. If left unchecked, her research could destroy human civilization. This is their story.

**Power System and Modelling Relays** Ibrahim Elnohokaty, Numerical relays are the result of the application of microprocessor technology in relay industry. Numerical relays have the ability to communicate with its peers, are economical and are easy to operate, adjust and repair. Modeling of digital and numerical relays is important to adjust and settle protection equipment in electrical facilities and to train protection personnel. Designing of numerical relays is employed to produce new prototypes and protection algorithms. Computer models of numerical relays for the study of protection systems are greatly enhanced when working along with an electromagnetic transient program (EMTP). A literature survey has revealed that previous modeling techniques presented a lack of automation in the generation of relay models, or show high complexity in linking the numerical relay models with the power system modeled in the EMTP. This thesis describes a new approach of modeling and designing of numerical relays. The proposed methodology employs a Visual C++-based program (PLSA) to obtain from the user the specifications of the relay to be designed, and to process this information to generate the FORTRAN code that represents the functional blocks of the relay. This generated code is incorporated in a PSCAD/EMTDC case using a resource called component, which facilitates the creation of user-custom models in PSCAD/EMTDC. Convenient electrical and logical signals are connected to the inputs and outputs of the PSCAD/EMTDC component. Further additions of digital relay models into the PSCAD/EMTDC case constitute the protection system model. The thesis describes a procedure for designing distance and differential relay models, but the methodology may be extended to design models of other relay elements. A number of protection system studies were performed with the structure created with the proposed methodology. Adjustment of distance and differential relays were studied. Relay performance under CT saturation and the effects of the removal of anti-aliasing analog filter were investigated. Local and remote backup distance protection of transmission lines was simulated. The adjustment of differential protection of power transformer to overcome the effects of inrush current was performed. Power transformer differential protection responses to internal and external faults were considered. Additionally, a set of tests were performed to investigate the consistency of the relay models generated with the proposed methodology. The results showed that the numerical relay models respond satisfactorily according with the expected results of the tests.

**Human Biological Diversity** Daniel E. Brown, 2019-12-09 Human Biological Diversity is an introductory textbook designed to cover the key contemporary topics in the study of human variation and human biology within the field of physical anthropology. Easily accessible for students with no background in anthropology or biology, this second edition includes two new chapters, one on human variation in the skeleton and dentition and the other on tracing human population affinities. All other chapters have been fully updated to reflect advances in the field and now include pedagogical features to aid readers in their understanding. Written for an introductory level but still containing valuable information that will be of interest to students on upper-level courses, Brown's textbook should be essential reading for all students taking courses on human variation, human biology, human evolution, race, anthropology of race, and general introductions to biological/physical anthropology.

**Infectious Agents Associated Cancers: Epidemiology and Molecular Biology** Qiliang Cai, Zhenghong Yuan, Ke Lan, 2017-10-20 This book offers a state-of-the-art report on recent discoveries concerning viral, bacterial, and parasite infectious cancers. Cancer is one of the most common causes of death and diseases in human populations, and 15%-25% of human cancers worldwide are considered to result from chronic infection by pathogens. Most oncology textbooks address genetic mutation, but not infectious agents such as viruses, bacteria and parasites. As such this book stimulates further research in the new area between cancers and chronic infection, and discusses the epidemiology and molecular biology of infectious causes of cancers. It also explores the prevention and treatment of infection-related cancers, and brings pathogenic research to the forefront in the never-ending endeavor to understand how pathogens maneuver and negotiate in a complex environment, including the micro/macro-environment of the human host. Further, it highlights the urgent need for a concerted program to develop vaccines and other diagnosis and interventions that will eventually help prevent and treat infectious cancers, and decrease their burden on human populations. It offers graduate students and researchers a comprehensive overview of the infectious causes of cancers.
