Internet Strategy: The Road to Web Services Solutions Guah, Matthew Waritay, Currie, Wendy L., 2005-09-30 This book tells you how to create, execute and evolve a customer-centric approach for your Internet-based management strategy--Provided by publisher.

Broadband Internet Kenneth Palmer, 2015 Over the past two decades, the Internet has had profound and rapidly growing effects on the economy, culture, and social interactions of Americans. Yet more than one in four households in the United States have not adopted broadband technology to access the Internet at home (on a computer, tablet, or mobile device). About 29 percent of households that have not adopted home Internet service cited cost as the primary reason. The number of Internet service providers (ISP) from which consumers can choose varies by speed. This book examines fixed and mobile Internet service providers. It also assesses the impact of broadband availability in the workplace; examines broadband availability, from the most basic speed levels, which allow a user to access several basic web tools, to the fastest speeds, for which developers are now beginning to design applications; examines information available about the application of UBP by Internet service providers; issues related to UBP selected consumers report

are important to them; and the potential effects of UBP on consumers.

Innovative Mobile and Internet Services in Ubiquitous Computing Leonard Barolli, Tomoya Enokido, 2017-07-03 This book highlights the latest research advances, new methods and development techniques, challenges and solutions from both theoretical and practical perspectives related to Ubiquitous and Pervasive Computing (UPC), with an emphasis on innovative, mobile and internet services. With the proliferation of wireless technologies and electronic devices, there is a rapidly growing interest in UPC, which makes it possible to create human-oriented computing environments in which computer chips are embedded in everyday objects and interact with the physical world. With UPC, people can go online even while moving around, thus enjoying nearly permanent access to their preferred services. Though it holds the potential

to revolutionize our lives, UPC also poses a number of new research challenges. The book gathers the proceedings of the 11th International Conference on Innovative Mobile and Internet Services in Ubiquitous Computing (IMIS-2017), held on June 28–June 30, 2017 in Torino, Italy.

The Internet for Everyone Richard W. Wiggins, 1995 Explains how to access and maneuver through the Internet using client/server applications such as NCSA Mosaic and indexing tools such as Veronica and WAIS, and how to become an information provider. Chapters cover the client/server model and the Internet, TCP/IP, establishing UNIX-based and non-UNIX-based information services, and building a campus-wide information system. Includes Internet provider profiles, and lists of on-line sites and service providers. Annotation copyright by Book News, Inc., Portland, OR

Multimedia and the Web from A to Z Patrick M. Dillon, David C. Leonard, 1998-09-02 As technology changes rapidly, new words and phrases are being introduced into our vocabulary, many with Net or Web affixed to them. The convergence of the media industries often brings with it a clash of professional vocabularies. Over time, some terms remain stable while others seem to disappear or transform their meaning. **Multimedia and the Web from A-Z** is a comprehensive dictionary aimed at stabilizing and clearly defining the language of multimedia. This second edition has been completely revised and expanded and contains 1,500 entries, including 500 new terms or phrases, all clearly and concisely defined. Extensive cross-referencing, an annotated

bibliography, and an acronym table are other useful additions to this dictionary.

Advanced Internet Services and Applications Whie Chang, 2003-08-02 The rapid growth of the Internet and related services is changing the way we work, act, and even think in a manner that far exceeds the prediction set by ?eld experts not long ago. It is now common belief that the Internet and its various applications covering both hardware appliances and software products will play an increasingly important role in everybody's daily lives. It is also our strong belief that the importance of the collaborative research and development e?orts focusing on the Internet among academia, industry, and regulating government bodies cannot be overemphasized. It is our great pleasure to hold the First International Workshop on - vanced Internet Services and Applications (AISA) 2002. The workshop is aimed to provide an international forum to share new ideas and research results in the area of the list of workshop topics. Under the main theme "Advances in Int- net Services and Applications", the workshop topics include QoS architecture, reliability, security, web acceleration, reverse/proxy caching schemes,

content delivery network, distributed/fault-tolerant architecture, storage/backup solutions, media and streaming server, switching technology, and home networking. We have solicited papers on these topics and attracted paper submissions from technically renowned organizations.

Solutions for Sustaining Scalability in Internet Growth Boucadair, Mohamed, 2013-07-31 An ever-increasing thirst for information in recent years among consumers, researchers, and the general population has necessitated continuous growth of internet architecture and accessibility, an issue which, if not addressed properly, may inhibit the growth of the internet as a whole. Solutions for Sustaining Scalability in Internet Growth investigates current issues impeding the growth of information architecture and explores methods for developing a wider-reaching and ever-evolving internet. The book presents viable solutions to some of the current threats to robust and pervasive information systems, enabling internet actors such as network providers, service providers, vendors, and regulatory bodies to ensure the creation of a more accessible and balanced internet.

Access Controlled Ronald Deibert, John Palfrey, Rafal Rohozinski, Jonathan Zittrain, 2010-04-02 Reports on a new generation of Internet controls that establish a new normative terrain in which surveillance and censorship are routine. Internet filtering, censorship of Web content, and online surveillance are increasing in scale, scope, and sophistication around the world, in democratic countries as well as in authoritarian states. The first

generation of Internet controls consisted largely of building firewalls at key Internet gateways; China's famous "Great Firewall of China" is one of the first national Internet filtering systems. Today the new tools for Internet controls that are emerging go beyond mere denial of information. These new techniques, which aim to normalize (or even legalize) Internet control, include targeted viruses and the strategically timed deployment of distributed denial-of-service (DDoS) attacks, surveillance at key points of the Internet's infrastructure, take-down notices, stringent terms of usage policies, and national information shaping strategies. Access Controlled reports on this new normative terrain. The book, a project from the OpenNet Initiative (ONI), a collaboration of the Citizen Lab at the University of Toronto's Munk Centre for International Studies, Harvard's Berkman Center for Internet and Society, and the SecDev Group, offers six substantial chapters that analyze Internet control in both Western and Eastern Europe and a section of shorter regional reports and country profiles drawn from material gathered by the ONI around the world through a combination of technical interrogation and field research methods.
