Pellen, William Miller, 2014-06-17 Catch up with the many innovations now affecting sci/tech libraries! The twenty-four chapters in *Innovations in Science and Technology Libraries* discuss the creation of digital collections, e-repositories, personalized Web environments, and discipline-specific Web sites for students and researchers. The book also explores the use of new technologies to improve document delivery and service provision as well as demonstrations of leadership by science librarians who are willing to take risks, adapt to change, control costs, and collaborate with colleagues. **Advanced Practice Nursing E-Book** Ann B. Hamric, Judith A. Spross, Charlene M. Hanson, 2008-07-02 Covering all advanced practice competencies and roles, this book offers strategies for enhancing patient care and legitimizing your role within today's health care system. It covers the history of advanced practice nursing, the theory behind the practice, and emerging issues. Offering a comprehensive exploration of advanced practice nursing, this edition also adds a focus on topics including the APN scope of practice, certification, and the ethical and legal issues that occur in clinical practice. The development of all major competencies of advanced practice nursing is discussed: direct clinical practice, consultation, coaching/guidance, research, leadership, collaboration, and ethical decision-making. Advanced practice competencies are discussed in relation to all advanced practice nursing and blended CNS-NP roles (case manager, acute care nurse practitioner), highlighting the shared aims and distinctions of each role. In-depth discussions on educational strategies explain how competencies develop as the nurses' practice progresses. A chapter on research competencies demonstrates how to use evidence-based research in practice, and how to promote these research competencies to other APNs. A conceptual framework shows the clear relationship between the competencies, roles, and challenges in today's health care environment. Practical strategies are provided for business management, contracting, and marketing. Comprehensive

information covers the essential competencies of the new Doctor of Nursing Practice degree. More exemplars (case studies) provide real-life scenarios showing APN competencies in action. A new chapter shows how to provide reliable and valid data to substantiate your impact and justify equitable reimbursement for APN services, also enhancing your skills in quality improvement strategies, informatics, and systems thinking. Information on telehealth considerations covers the new sources of electronic healthcare information available to patients and describes how to counsel them on using reliable resources.

*Citation-based Plagiarism Detection* Bela Gipp,2014-06-26

Plagiarism is a problem with far-reaching consequences for the sciences. However, even today's best software-based systems can only reliably identify copy & paste plagiarism. Disguised plagiarism forms, including paraphrased text, cross-language plagiarism, as well as structural and idea plagiarism often remain undetected. This weakness of current systems results in a large percentage of scientific plagiarism going undetected. Bela Gipp provides an overview of the state-of-the-art in plagiarism detection and an analysis of why these approaches fail to detect disguised plagiarism forms. The author proposes Citation-based Plagiarism Detection to address this shortcoming. Unlike character-based approaches, this approach does not rely on text comparisons alone, but analyzes citation patterns within documents to form a language-independent semantic fingerprint for similarity assessment. The practicability of Citation-based Plagiarism Detection was proven by its capability to identify so-far non-machine detectable plagiarism in scientific publications.
