Analysis and Design of Hybrid Systems 2003 (ADHS 03) Sebastian Engell, Herve Gueguen, Janan Zaytoon, J. Zaytoon, 2003-12-19 Before the Riders came to their remote valley the Yendri led a tranquil pastoral life. When the Riders conquered and enslaved them, only a few escaped to the forests. Rebellion wasn't the Yendri way; they hid, or passively resisted, taking consolation in the prophecies of their spiritual leader. Only one possessed the necessary rage to fight back: Gard the foundling, half-demon, who began a one-man guerrilla war against the Riders. His struggle ended in the loss of the family he loved, and condemnation from his own people. Exiled, he was taken as a slave by powerful mages ruling an underground kingdom. Bitterer and wiser, he found more subtle ways to earn his freedom. This is the story of his rise to power, his vengeance, his unlikely redemption and his maturation into a loving father--as well as a lord and commander of demon armies. Kage Baker, author of the popular and witty fantasy, *The Anvil of the World*, returns to that magical world for another story of love, adventure, and a fair bit of ironic humor. At the publisher's request, this title is being sold without Digital Rights Management software (DRM) applied.

Inverse Problems and Optimal Design in Electricity and Magnetism Pekka Neittaanmäki, M. Rudnicki, A. Savini, 1996-01-11 The impact of optimization methods in electromagnetism has been much less than in mechanical engineering and particularly the solution of inverse problems in structural mechanics. This book addresses this omission: it will serve as a guide to the theory as well as the computer implementation of solutions. It is self-contained covering all the mathematical theory necessary.

New Architecture and Urbanism Saswati Chetia, Deependra Prashad, 2010-01-08 This book on "New Architecture and Urbanism: Development of Indian Traditions" builds on the contributions from various architects, planners, educationists, decision-makers & others from across the world who gathered together to create a forum for the promotion of traditional processes and techniques for the creation of the built environment. This forum was initiated by INTBAU India, The International Network for Traditional Building, Architecture and Urbanism in India, and supported by The Nabha Foundation. This book presents the arguments, axioms and case studies related to Traditional Architecture and Urbanism in a sequential format. Firstly it examines the "New ways of looking at Heritage" by separating it from pure history into a living and evolving process. The book looks at what defines traditional methods and their relevance to the contemporary context. It also examines the aspects of Continuity and Contextual frameworks in the built environment. The section on "Sustainable Buildings, Places and Communities" explores the many facets of locally driven processes from the viewpoint of tradition and sustainability. These include many community based planning methods and their applications in shaping the built environment, aspects of environmental sustainability and on how appropriateness could be ingrained into current architectural education. Lastly, the book delves into a number of executed examples in architecture seeking to learn from tradition and examples in "place-making urbanism" which in turn promotes humane, walkable and connected neighbourhoods.

Scalability and Sustainability of Business Models in Circular, Sharing and Networked Economies Adam Jabłoński, Marek Jabłoński, 2020-02-13 This book explores many key areas of business science and practice. It is mainly centred on the field of strategic management with a special focus on the concept of business models and the new dimensions of the economy. In terms of economic conditions, the book discusses the principles of the sharing economy, the circular economy, and the networked economy. This multi-faceted approach makes the book holistic, creating a comprehensive image of a multidimensional market. It will appeal to theoreticians and scientists dealing with the issues of building and operationalising innovative business models, as well as students exploring the issues of

strategic management and the new economy. Furthermore, it will also be of interest to business practitioners-- both entrepreneurs and top managers--who want to be business virtuosos, who can change their organisations and their business models.

Constructing Identity in Contemporary Architecture Peter Herrle,Stephanus Schmitz,2009 The global spread of uniform modes of production and cultural values has been accompanied by a dissemination of stereotypes of modern architecture styles almost everywhere around the globe. Paradoxically, the reverse process has also emerged: In some countries, the elites feel the necessity to counterbalance the loss of identity and defend their own cultures against the intruding forces of globalization. What started as a defensive notion has developed into a more progressive attempt to re-create what has allegedly been lost. This trend is being strongly expressed in discourses about architecture in countries of the South. Who are the actors feeling compelled to construct new identities? How are these new identities in architecture created in various parts of the world? And, which are the ingredients borrowed from various historical and ethnic traditions and other sources? These and other questions are discussed in five case studies from different parts of the world, written by renowned scholars from Brazil, Mexico, Egypt, India and Singapore.

The Temple Road Towards a Great India Marta Kudelska,Dorota Kamińska-Jones ,Agnieszka Staszczuk,Agata Świerzowska ,2019-11-30 This book presents an analysis of the foundations organised by the Birla family in India. Several generations were involved in the renovation and establishment of sanctuaries, temples and other sacral buildings. As a result, between 1933 and 1998, nineteen Birla Mandirs were established, mainly in northern and central India. All the temples have the capacity to surprise with their various decorative motifs, not seen in other places, which – apart from their aesthetic function – above all bear important symbolic content. Therefore, is it possible to treat the Birla Mandirs as a specific medium – the carrier of a particular message that is not only religious, but with a significance that permeates other layers of social and political discourse. This message, as the authors of the book claim, have a bearing on the socio-political thought of India – supported by the creation and propagation of ideas related to identity and a national art. It also conveys the idea of hierarchical Hindu inclusivism which, although considering all religions as equal, treats Hinduism in a unique way – seeing within it the most perfect form of religion, giving man the opportunity to learn the highest truth. The book also examines whether the temples founded by the Birla family and the religious activities undertaken therein apply the concept of “inventing” tradition, and whether traditions created (or “modernised”) in contemporary times are a way of enhancing the appeal of the message conveyed from temple to society. “The Vastness of Culture” is a series of publications presenting cultural studies and emphasizing the role of comparative research and analyses that reveal similarities, differences and intercultural influences. In our publications, cultures and civilizations are in a state of constant flux, engaging in dialogue, creating new understandings, competing for meaning under the influence of global content, without any clear boundaries, but with a vastness that forces questions to be raised.

Design and Analysis of Experiments Douglas C. Montgomery,2008-07-28 This bestselling professional reference has helped over 100,000 engineers and scientists with the success of their experiments. The new edition includes more software examples taken from the three most dominant programs in the field: Minitab, JMP, and SAS. Additional material has also been added in several chapters, including new developments in robust design and factorial designs. New examples and exercises are also presented to illustrate the use of designed experiments in service and transactional organizations. Engineers will be able to apply this information to improve the quality and efficiency of working systems.

The Bungalow in Twentieth-Century India Madhavi Desai,Miki Desai,2016-12-05 The primary era of this study - the twentieth century - symbolizes the peak of the colonial rule and its total decline, as well as the rise of the new nation state of India. The processes

that have been labeled 'westernization' and 'modernization' radically changed middle-class Indian life during the century. This book describes and explains the various technological, political and social developments that shaped one building type - the bungalow - contemporaneous to the development of modern Indian history during the period of British rule and its subsequent aftermath. Drawing on their own physical and photographic documentation, and building on previous work by Anthony King and the Desais, the authors show the evolution of the bungalow's architecture from a one storey building with a verandah to the assortment of house-forms and their regional variants that are derived from the bungalow. Moreover, the study correlates changes in society with architectural consequences in the plans and aesthetics of the bungalow. It also examines more generally what it meant to be modern in Indian society as the twentieth century evolved.

Sustainable Approaches to Urban Transport Dinesh Mohan, Geetam Tiwari, 2019-07-02
As cities become increasingly congested, current transport patterns are unsustainable: heavy in energy use, high in economic and environmental cost, and exacerbating inequity between those who can access high-speed travel and those who cannot. Good urban planning develops human-scale cities and encourages modes such as bicycles, increased zones exclusive to pedestrians within cities, and changed fiscal policies to incentivize public over private transport. Equally, it requires good engineering design to manage road use. *Sustainable Approaches to Urban Transport* brings together contributions from leading international experts in urban planning, transport, and governance who suggest changes to make our cities more sustainable in the face of climate change. All professionals working in transport and engineering and planning students will find an overview of a broad field in this interdisciplinary collection of essays.

Recent Advances in Civil Engineering Lakshman Nandagiri, M. C. Narasimhan, Shriram Marathe, 2022-06-26 This book presents the select proceedings of the International Conference on Civil Engineering Trends and Challenges for Sustainability (CTCS 2021). It discusses emerging and latest research and advances in sustainability in different areas of civil engineering, providing solutions to sustainable development. Various topics covered include sustainable construction technology & building materials; structural engineering, transportation and traffic engineering, geotechnical engineering, environmental engineering, water resources engineering, remote sensing and GIS applications. This book will be of potential interest to researchers and professionals working in sustainable civil engineering and related fields.

Combinatorial Designs and Applications W.D. Wallis, 2020-12-22 An advanced reference containing 21 selected or consolidated papers presented at an international conference in April 1988 at Tunxi (now Hunangshan), China. Contains recent, previously unavailable findings of Chinese mathematicians; discusses problems, results, and proving methods of combinatorial d

One Idea, Many Plans Sanjeev Vidyarthi, 2015-02-11 Planners tend to promote formal plans as the only game in town while diverse efforts of urban actors shape our cities. Tracking the development of American neighborhood unit concept in independent India's planning practice and literature—from the national level policies to on-the-ground applications in the city of Jaipur—Vidyarthi explains how a host of actors including neighborhood residents, squatters, politicians and developers made different kinds of plans that assimilated the design concept in line with their practical concerns and cultural preferences creating unique variants of neighborhood urbanism over time. *One Idea, Many Plans* counters misguided characterization of these unforeseen efforts as 'unauthorized' by state authorities. It shows how the frequently informal and tacit plans were neither arbitrary actions nor aimless subversions but purposeful future-oriented efforts that shaped the envisaged sociality and spatiality of Indian cities in more meaningful ways than the official master plans promoting planned neighborhoods. Carefully illustrating the different kinds of

plans local actors use to guide incremental adaptation, improvement and investment, Vidyarthi offers insights about how we might improve formal plan making. Scholars, students and professional practitioners interested in different regions of the global south would find these lessons useful as a new generation of city design ideas like sustainability and new urbanism gain traction in an increasingly globalized World.

India Peter Scriver, Amit Srivastava, 2015-02-15 A place of astonishing contrasts, India is home to some of the world's most ancient architectures as well as some of its most modern. It was the focus of some of the most important works created by Le Corbusier and Louis Kahn, among other lesser-known masters, and it is regarded by many as one of the key sites of mid-twentieth century architectural design. As Peter Scriver and Amit Srivastava show in this book, however, India's history of modern architecture began long before the nation's independence as a modern state in 1947. Going back to the nineteenth century, Scriver and Srivastava look at the beginnings of modernism in colonial India and the ways that public works and patronage fostered new design practices that directly challenged the social order and values invested in the building traditions of the past. They then trace how India's architecture embodies the dramatic shifts in Indian society and culture during the last century. Making sense of a broad range of sources, from private papers and photographic collections to the extensive records of the Indian Public Works Department, they provide the most rounded account of modern architecture in India that has yet been available.

Climate Resilient, Green and Low Carbon Built Environment Ashok Kumar Jain, 2023-04-26 This book constitutes state-of-the-art research covering a wide range of topics including climate change and carbon emissions, air quality and pollution control, urbanism, land and circular economy, sustainable transport, energy, water, biodiversity and greenery, environmental services, housing, and construction with respect to the built environment. The concepts of sustainability in built environment conclude with reimagining the city. The content includes pedagogical features such as examples, simple flowing language and over 100 figures. The book aims to motivate architects, engineers, consultants, builders, and planners to respond to the challenges of sustainability in the built environment.

Optimal Design of Experiments Friedrich Pukelsheim, 2006-04-01 Optimal Design of Experiments offers a rare blend of linear algebra, convex analysis, and statistics. The optimal design for statistical experiments is first formulated as a concave matrix optimization problem. Using tools from convex analysis, the problem is solved generally for a wide class of optimality criteria such as D-, A-, or E-optimality. The book then offers a complementary approach that calls for the study of the symmetry properties of the design problem, exploiting such notions as matrix majorization and the Kiefer matrix ordering. The results are illustrated with optimal designs for polynomial fit models, Bayes designs, balanced incomplete block designs, exchangeable designs on the cube, rotatable designs on the sphere, and many other examples.

Functional Approach to Optimal Experimental Design Viatcheslav B.

Melas, 2006-04-20 The present book is devoted to studying optimal experimental designs for a wide class of linear and nonlinear regression models. This class includes polynomial, trigonometrical, rational, and exponential models as well as many particular models used in ecology and microbiology. As the criteria of optimality, the well known D-, E-, and c-criteria are implemented. The main idea of the book is to study the dependence of optimal - signs on values of unknown parameters and on the bounds of the design interval. Such a study can be performed on the base of the Implicit Function Theorem, the classical result of functional analysis. The idea was first introduced in the author's paper (Melas, 1978) for nonlinear in parameters exponential models. Recently, it was developed for other models in a number of works (Melas (1995, 2000, 2001, 2004, 2005), Dette, Melas (2002, 2003), Dette, Melas, Pepelyshev (2002, 2003, 2004b), and Dette, Melas, Biederman (2002)). The purpose of the present book is to bring together the results obtained and to develop further underlying concepts and tools. The approach, mentioned above, will be called the functional approach. Its brief description can be found in the Introduction. The book contains eight chapters. The first chapter introduces basic concepts and results of optimal design theory, initiated mainly by J. Kiefer.
