**Advances in Ultrasound Technology for Environmental Remediation** Ta Yeong Wu,Ningqun Guo,Chee Yang Teh,Jacqueline Xiao Wen Hay,2012-10-20 Over the past ten years, innovative technologies have shown that advanced oxidation processes are highly promising when applied to the remediation of polluted water or wastewater as they don't generate any sludge or solid material of hazardous nature. *Advances in Ultrasound Technology for Environmental Remediation* reviews the fundamentals of ultrasound technology and the state of the art developments in "ultrasound-based free radical generation" in environmental remediation and pollution prevention. It also presents the challenges of introducing ultrasound technology into large-scale environmental remediation applications and examines the methods used to improve ultrasound technology. Indeed, ultrasonic systems are extremely sensitive and vulnerable to operational parameters which cannot be controlled without a good knowledge and understanding of physical and chemical phenomena. *Advances in Ultrasound Technology for Environmental Remediation* features the theory and fundamentals of ultrasound technology and discusses its potential as an alternative method in environmental remediation.

Among the positions explored contain procedures for implementing electronic health records in a physician's office, Health information troubleshooting, HIPPA compliance, and hands-on practical use. This text provides students with no background whatsoever in electronic health records with the techniques and rationales for using such cutting-edge techniques in real-world situations. **Making IT Better** National Research Council,Commission on Physical Sciences, Mathematics, and Applications,Computer Science and Telecommunications Board,Committee on Information Technology Research in a Competitive World,2000-11-05 The flood of information technology (I.T.) products and services entering the market place often obscures the need to nurture the research enterprise. But as I.T. becomes integrated into all aspects of society, the need for research is even greater. And the range of issues that need to be addressed is broader than ever. This new book highlights the fundamental importance of research to ensure that I.T. meets society's expanding needs. Against the background of dramatic change in the I.T. landscape, the committee examines four key questions: Is the scope of I.T. research broad enough-particularly in the arena of large-scale systems-to address government, business, and social applications? Are government and industrial sponsors providing sufficient funding for I.T. research? Is the research net big both big and diverse enough to capture sufficient financial and intellectual resources to advance the field? Are structures and mechanisms for funding and conducting research suited to the new sets of research challenges?

*Continuing Innovation in Information Technology* National Research Council,Division on Engineering and Physical Sciences,Computer Science and Telecommunications Board,Committee on Depicting Innovation in Information Technology,2012-08-23 Information technology (IT) is widely understood to be the enabling technology of the 21st century. IT has transformed, and continues to transform, all aspects of our lives: commerce and finance, education, employment, energy, health care, manufacturing, government, national security, transportation, communications, entertainment, science, and engineering. IT and its impact on the U.S. economy-both directly (the IT sector itself) and indirectly (other sectors that are powered by advances in IT)-continue to grow in size and importance. In 1995, the National Research Council's Computer Science and Telecommunications Board (CSTB) produced the report

Evolving the High Performance Computing and Communications Initiative to Support the Nation's Information Infrastructure. A graphic in that report, often called the tire tracks diagram because of its appearance, produced an extraordinary response by clearly linking government investments in academic and industry research to the ultimate creation of new information technology industries with more than \$1 billion in annual revenue. Used in presentations to Congress and executive branch decision makers and discussed broadly in the research and innovation policy communities, the tire tracks figure dispelled the assumption that the commercially successful IT industry is self-sufficient, underscoring through long incubation periods of years and even decades. The figure was updated in 2002, 2003, and 2009 reports produced by the CSTB. With the support of the National Science Foundation, CSTB updated the tire tracks figure. Continuing Innovation in Information Technology includes the updated figure and a brief text based in large part on prior CSTB reports.

*Negotiating Conviviality* L. Hay, 2014-06-13 This book is an ethnographic study of a group of migrants in Cape Town from Malawi, Zimbabwe and South Africa. It seeks to understand how migrants overcome structural exclusion by forming and maintaining convivial relationships through the Bay Community Church and how this is facilitated by Information and Communication Technologies (ICTs). The book argues that ICTs are implicated in the negotiation of conviviality. ICTs allow for a negotiation of intimacy and distance; although their functions may facilitate more contact than is desired or further distance those already separated physically. This book interrogates the strict division between insiders and outsiders and highlights that migrants are able to sustain multiple networks and relationships, linking their home and host countries. Despite increasingly strict border control and animosity from host communities, migrants are able to overcome imposed identities such as outsider. They do so by using ICTs such as cell phones and Facebook to emphasise their Christian identity, which is one of the main factors for inclusion in church-based networks. Membership with a mixed denominational church such as the Bay further challenges the notion that migrants stick to themselves. Inclusive communities such as the Bay and everyday desires for conviviality evoke the need to reconsider policies too narrowly articulated around the dichotomisation of foreigners and nationals, home and away, us and them.
