**Miguel A. Esteso, Ana Cristina Faria
Ribeiro, A. K. Haghi**

Development as Freedom Amartya Sen, 2011-05-25 By the winner of the 1988 Nobel Prize in Economics, an essential and paradigm-altering framework for understanding economic development--for both rich and poor--in the twenty-first century. Freedom, Sen argues, is both the end and most efficient means of sustaining economic life and the key to securing the general welfare of the world's entire population. Releasing the idea of individual freedom from association with any particular historical, intellectual, political, or religious tradition, Sen clearly demonstrates its current applicability and possibilities. In the new global economy, where, despite unprecedented increases in overall opulence, the contemporary world denies elementary freedoms to vast numbers--perhaps even the majority of people--he concludes, it is still possible to practically and optimistically restrain a sense of social accountability. **Development as Freedom** is essential reading.

Factors in Economic Development A. K. Cairncross, 2013-12-13 First published in 1961, this work is a compendium of essays written by esteemed economist Sir Alexander Cairncross, pertaining to the theme of economic development. A wide cross-section of factors are taken into account in this extensive collection of articles, amongst which are the importance of investment and technical progress; trade; administration and planning; and the role of education.

Plant Breeding and Cultivar Development D. P. Singh, A. K. Singh, A. Singh, 2021-01-21 Plant Breeding and Cultivar Development features an optimal balance between classical and modern tools and techniques related to plant breeding. Written for a global audience and based on the extensive international experience of the authors, the book features pertinent examples from major and minor world crops. Advanced data analytics (machine learning), phenomics and artificial intelligence are explored in the book's 28 chapters that cover classical and modern plant breeding. By presenting these advancements in specific detail, private and public sector breeding programs will learn about new, effective and efficient implementation. The insights are clear enough that non-plant breeding majoring students will find it useful to learn about the subject, while advanced level students and researchers and practitioners will find practical examples that help them implement their work. Bridges the gap between conventional breeding practices and state-of-the-art technologies Provides real-world case studies of a wide range of plant breeding techniques and practices Combines insights from genetics, genomics, breeding science, statistics, computer science and engineering for crop improvement and cultivar development

Computational Models in the Economics of Environment and Development A.K.

Duraiappah,2012-12-06 Computational Models in the Economics of Environment and Development provides a step-by-step guide in designing, developing, and solving non-linear environment-development models. It accomplishes this by focusing on applied models, using real examples as case studies. Additionally, it gives examples of developing policy interventions based on quantitative model results. Finally, it uses a simple computer program, GAMS, to develop and solve models. This book is targeted towards university lecturers and students in economic modeling and sustainable development, but is also of particular interest to researchers at sustainable development research institutes and policy makers at international sustainable development policy institutions such the World Bank, UNDP, and UNEP.

Global Warming and Economic Development A.K.

Duraiappah,2012-12-06 The computer revolution both in the hardware as well as in software has made it possible for economists to analyze complex issues which could not be solved in the past by analytical methods. A large library of numerical techniques are now available to economists for

solving models ranging from a simple system of linear simultaneous equations to large non-linear dynamic optimization models. We attempt to take advantage of these advancements in computational economics to address the issue of global warming and economic development. The use of computer simulation models has enhanced the understanding of some of the underlying issues in the global warming literature which would have been impossible without these models. However, to date, the global warming issue has been addressed in a partial equilibrium framework. In other words, the climate scientists tend to specify economic variables as exogenous variables in their global warming models while the economists do the same by specifying the climate variables as exogenous variables in their global warming models. Both approaches ignore important feedback relationships which will be triggered when either economic or climate variables are perturbed. The ideal model structure would be one in which both systems are incorporated within one framework with emphasis on the long run effects of greenhouse gas curbing policies and the corresponding effect on the economic growth potential of the economies.

Chemistry and Chemical Engineering for Sustainable Development Miguel A. Esteso, Ana Cristina Faria Ribeiro, A. K. Haghi, 2020-11-26 The world faces significant challenges as population and consumption continue to grow while nonrenewable fossil fuels and other raw materials are depleted at ever-increasing rates. This volume takes a technical approach that addresses these issues using green design and analysis. It brings together innovative research, new concepts, and novel developments in the application of new tools for chemical and materials engineers. It is an immensely research-oriented, comprehensive, and practical work that focuses on the use of applied concepts to enhance productivity and sustainability in chemical engineering. It contains significant research that reports on new methodologies and important applications in the fields of chemical engineering as well as the latest coverage of chemical databases. Highlighting theoretical foundations, real-world cases, and future directions, the volume covers a diverse collection of the newest innovations in the field, including new research on atomic/nuclear physics, the barometric formula, amino acids in aqueous solutions, bioremediation and biotechnology, and more.

Developing the Underdeveloped A. K. Sharma, 1989 Examine some aspects of rural poverty, theoretically and empirically. It presents the various concepts and theories of poverty and development, and develops a synthetic perspective. The data is obtained on three most important strategies of development in contemporary India, viz. loaning, health and family welfare, and education. This book presents the theoretical framework, method and procedure, analysis of data, major findings and policy implications. Finally it raises some philosophical issues involved in planning for poverty removal and a D.P.S. from the International Institute of Population Studies.

Tailored Functional Materials for Clean and Sustainable Development Tamara Tatrishvili, Neha Kanwar Rawat, Ann Rose Abraham, A. K. Haghi, 2024-01-09 The use of tailored functional materials has grown enormously in recent years due to their wide-ranging applications in both science and engineering. This new volume explores the tailoring and characterization of modern materials with functional applications and for use in clean technologies in different sectors. The volume explains why the unique features of tailored nanomaterials make them ideal candidates for application in biosensor technology, pathogenic microbe detection, and modification of polyester-based polymers. It summarizes polymer functionalization and their applications in

medical science and engineering and provides an understading of tailored custom-designed solids along with computational chemistry, showing how the fast growth in solid materials has influenced different engineering sectors. With the inclusion of case studies in material science, the volume explains how tailored materials can be prepared and utilized as application-oriented composites.
