Big Data Analytics and Computing for Digital Forensic Investigations Suneeta Satpathy, Sachi Nandan Mohanty, 2020-03-17 Digital forensics has recently gained a notable development and become the most demanding area in today's information security requirement. This book investigates the areas of digital forensics, digital investigation and data analysis procedures as they apply to computer fraud and cybercrime, with the main objective of describing a variety of digital crimes and retrieving potential digital evidence. Big Data Analytics and Computing for Digital Forensic Investigations gives a contemporary view on the problems of information security. It presents the idea that protective mechanisms and software must be integrated along with forensic capabilities into existing forensic software using big data computing tools and techniques. Features Describes trends of digital forensics served for big data and the challenges of evidence acquisition Enables digital forensic investigators and law enforcement agencies to enhance their digital investigation capabilities with the application of data science analytics, algorithms and fusion technique This book is focused on helping professionals as well as researchers to get ready with next-generation security systems to mount the rising challenges of computer fraud and cybercrimes as well as with digital forensic investigations. Dr Suneeta Satpathy has more than ten years of teaching experience in different subjects of the Computer Science and Engineering discipline. She is currently working as an associate professor in the Department of Computer Science and Engineering at ICFAI Tech, ICFAI Foundation for Higher Education, Hyderabad, India. His research interests include data mining, big data analysis, cognitive science, fuzzy decision-making, brain-computer interface, cognition and computational intelligence.

**Deadline Man** Jon Talton,2012-05-31 He's a man we know only as the columnist. He writes for a newspaper in Seattle, isn't afraid to stir up trouble, and keeps his life - including his multiple lovers and his past - in safe compartments. But it's all about to be violently upended when he goes out on what seems like the most mundane of assignments, looking into a staid company that never makes news. The moment one of his sources takes a dive off a downtown skyscraper, the columnist is plunged into a harrowing maze of murder, intrigue, and secrets that powerful forces intend to keep hidden at all costs. All he has to go on is a corporate world where nothing is as it seems, increasingly menacing encounters with mysterious federal agents, and the unsettling meme eleven/eleven. Meanwhile, the paper itself is dying. So the columnist joins with an aggressive young reporter to see if one explosive story can save a newspaper. Soon they're running to make the deadline of their lives....

<u>Speakout Pre-Intermediate Teacher's Book</u> Jenny Parsons,2011 Speakout is a comprehensive English course that helps adult learners gain confidence in all skills areas using authentic materials from the BBC. With its wide range of support material, it meets the diverse needs of learners in a variety of teaching situations and helps bridge the gap between the classroom and the real world.

**E-Business Essentials** Nick Bontis, 2004-09-01 This special issue of QJEC marks the final instalment of the journal. The QJEC has had a long-standing history of international scholarship focused on the emerging field of electronic commerce with a broad, interdisciplinary approach. It has established the field's intellectual foundation with state-of-the-art research from business, computer science, engineering, law, psychology, and sociology. This particular issue focuses on an eclectic group of papers that are international in scope with authors from Canada, Australia, France, Germany, South Africa and Italy. The papers range in topics from valuing dot com companies, to mobile health and portals, to supply chain management.

Achieve Planner, 2020-09-06 The Achieve Planer is engineered to help take your largest life goals and reach them. Monthly organization sheets keep you on track and highlight the tools you have to make steps towards your goals. Daily sheets provide reflection space to keep you grounded to the positives each day offers, while including the normal organization space for to-dos, appointments, and notes like other planners. The Achieve Planner is the perfect way to keep life organized, on track, and full of value. The Achieve Planner features a hard cover to ensure it holds up to heavy use and is small enough to carry handy; fitting in most handbags.

Advanced Fuzzy Logic Approaches in Engineering Science Ram, Mangey, 2018-09-14 Fuzzy logic techniques have had extraordinary growth in various engineering systems. The developments in engineering sciences have caused apprehension in modern years due to high-tech industrial processes with ever-increasing levels of complexity. Advanced Fuzzy Logic Approaches in Engineering Science provides innovative insights into a comprehensive range of soft fuzzy logic techniques applied in various fields of engineering problems like fuzzy sets theory, adaptive neuro fuzzy inference system, and hybrid fuzzy logic genetic algorithms belief networks in industrial and engineering settings. The content within this publication represents the work of particle swarms, fuzzy computing, and rough sets. It is a vital reference source for engineers, research scientists, academicians, and graduate-level students seeking coverage on topics centered on the applications of fuzzy logic in high-tech industrial processes.

The Precipitating Electron Detectors (SSJ/3) for the Block 5D/ Flights 2-5 DMSP Satellites David A. Hardy, Alan Huber, M. S. Gussenhoven, 1979 In addition to weather monitoring devices, the Defense Meteorological Satellite Program satellites currently have on-board auroral imaging devices, precipitating electron detectors, and thermal plasma analyzers. Together these provide a strong tool for analyzing the high latitude, near earth, magnetospheric environment. The program is planned to continue into the 1980s. The precipitating electrons are measured in 16 energy channels spanning an energy of 50 eV to 20 keV. The data have the potential of providing real-time monitoring of auroral activity through oval boundary measurements. To facilitate the use of these data and to examine the feasibility of making consistent, reliable boundary measurements, this report has been prepared. It contains the following: a general description of the DMSP-F2 orbit, its

variations in universal time and season, and the pertinence of these variations to boundary measurements, a description of the SSJ/3 pakcage, one of which is built for each of four DMSP satellites and the results of calibrating two of the instruments; a discussion of the way data is processed; a comparison of Northpole-Southpole passes during a magnetospherically quiet period and during an active period, and a discussion of the general features of the electron precipitation as they may be used to determine auroral boundaries.

**Experimental Investigation of the Problem of Surface Roughness** H. Schlichting,1937 Based on the universal laws of turbulent velocity distribution at rough and smooth walls, there is in the present work presented a method that allows surface roughness tests and in particular, measurements on the roughness of ship surfaces to be carried out in a much simpler manner. The types of roughness investigated were in the form of flat, rough plates installed in a square-section rectangular channel, the other three walls always being smooth. Twenty-one plates of various roughness were investigated, the roughness elements being the following: spheres of diameter 0.41 and 0.21, respectively, spherical segments, cones, and short and long angles.

**Unsteady Combustion** F. Culick,M.V. Heitor,J.H. Whitelaw,2012-12-06 This book contains selected papers prepared for the NATO Advanced Study Institute on Unsteady Combustion, which was held in Praia da Granja, Portugal, 6-17 September 1993. Approximately 100 delegates from 14 countries attended. The Institute was the most recent in a series beginning with Instrumentation for Combustion and Flow in Engines, held in Vimeiro, Portugal 1987 and followed by Combusting Flow Diagnostics conducted in Montechoro, Portugal in 1990. Together, these three Institutes have covered a wide range of experimental and theoretical topics arising in the research and development of combustion systems with particular emphasis on gas-turbine combustors and internal combustion engines. The emphasis has evolved roughly from instrumentation and experimental techniques to the mixture of experiment, theory and computational work covered in the present volume. As the title of this book implies, the chief aim of this Institute was to provide a broad sampling of problems arising with time-dependent behaviour in combustors. In fact, of course, that intention encompasses practically all possibilities, for steady combustion hardly exists if one looks sufficiently closely at the processes in a combustion chamber. The point really is that, apart from the excellent paper by Bahr (Chapter 10) discussing the technology of combustors for aircraft gas turbines, little attention is directed to matters of steady performance. The volume is divided into three parts devoted to the subjects of combustion-induced oscillations; combustion in internal combustion engines; and experimental techniques and modelling.
