Introduction to Sound System Design and Electro-Acoustics Peter Swarte, 2014-05-01 This book is intended for those who are active with sound amplification and sound distribution. The book provides information on adapting sound systems and/or transducer to the given acoustics like in open, half-open and closed spaces. An important aspect is how loudspeakers can be adapted to cover all types of surroundings. Very often a choice has to be made from a wide range of loudspeakers. On the other hand a combination of loudspeakers must be developed and composed in order to adapt the loudspeakers to the given acoustical circumstances. The question of which loudspeaker is the correct choice and how they need to be set-up so that speech and music are fully comprehensible in all kinds of acoustical and noisy circumstances. This book gives a full answer to these questions. The reader is also made aware

of the design of loudspeakers on the basis of Small and Thiele parameters. With thorough calculations and the visibility of the outcome of these calculations by simple software it is possible to convert the acoustic and mechanical elements of the loudspeaker into electrical analogues so that the loudspeaker is simulated on the PC. Using an example the calculations mentioned above can be supported. Finally the full reference list simplifies the task of the reader in finding the information they require. "I've been fascinated by the possibilities of Electro-acoustics since I was 10 years old and now I am very pleased to be able to share the knowledge that I built up over 40 years working in the Electro-acoustics division of Philips." My work experience was supplemented by giving lectures on electro-acoustics at the post-academic courses on acoustics in Antwerp (Belgium)

The U.S. Army Research Laboratory's Acoustic & Seismic Database and User Interface Software, 1999
The U.S. Army Research Laboratory's (ARL) acoustic and seismic data consist of various time-series signatures of battlefield ground and air targets. These signatures were collected from a number of sensor arrays placed within detection range of the targets travel path. The growth of the collected acoustic and seismic data in the past few years has resulted in an inevitable need for a database. As the first phase of ARL's Automatic Target Recognition (ATR) Lab effort a multiuser client/server acoustic and seismic database and an innovative user interface software are being developed. Although not completed the database and

user-interface software are mature enough to be used by ARL researchers on a daily basis. As a parallel effort to the populating of the database ARL has begun the second phase of the ATR Lab which is to integrate various signal-processing algorithms to the database software. At present most of the existing signature data have been transferred from digital tapes onto compact disks. Data from the server can be accessed and downloaded to client PCs over the local area network via the custom-written user interface software. This front-end software features data entry and query capabilities; a suite of graphic and data analysis tools to provide quick data viewing extracting and downloading; and the capability to seamlessly evaluate algorithms against selected data segments. The ATR Lab enables users to quickly load target signatures for evaluating the performance characteristics of target detection tracking and identification algorithms.

Mathematical Modeling and Signal Processing in Speech and Hearing Sciences Jack Xin, Yingyong Qi, 2014-04-14 The aim of the book is to give an accessible introduction of mathematical models and signal processing methods in speech and hearing sciences for senior undergraduate and beginning graduate students with basic knowledge of linear

algebra, differential equations, numerical analysis, and probability. Speech and hearing sciences are fundamental to numerous technological advances of the digital world in the past decade, from music compression in MP3 to digital hearing aids, from network based voice enabled services to speech interaction with mobile phones. Mathematics and computation are intimately related to these leaps and bounds. On the other hand, speech and hearing are strongly interdisciplinary areas where dissimilar scientific and engineering publications and approaches often coexist and make it difficult for newcomers to enter.

Spatial Sound Bosun Xie, 2022-10-17 Spatial sound is an enhanced and immersive set of audio techniques which provides sound in three-dimensional virtual space. This comprehensive handbook sets out the basic principles and methods with a representative group of applications: sound field and spatial hearing; principles and analytic methods of various spatial sound systems, including two-channel stereophonic sound, and multichannel horizontal and spatial surround sound; ambisonics; wavefield synthesis; binaural playback and virtual auditory display; recording and synthesis, and storage and transmission of spatial sound signals; and objective and subjective evaluation. Applications range from cinemas to small mobile devices. The only book to review spatial sound principles and applications extensively Covers the whole field of spatial sound The book suits researchers, graduate students, and specialist engineers in acoustics, audio, and signal processing.

Acoustic Analyses Using Matlab and Ansys Carl Howard, Benjamin Cazzolato, 2014-12-18 This is the first book of its kind that describes the use of ANSYS finite element analysis (FEA) software, and MATLAB engineering programming software to solve acoustic problems. It covers simple text book problems, such as determining the natural frequencies of a duct, to progressively more complex problems that can only be solved using FEA software

Robotic Sailing 2015 Anna Friebe, Florian Haug, 2015-08-20 This book presents the cutting edge developments within a broad field related to robotic sailing. The contributions were presented during the 8th International Robotic Sailing Conference, which has taken place as a part of the 2015 World Robotic Sailing Championships in Mariehamn, Åland (Finland), August 31st – September 4th 2015. Since more than a decade, a series of competitions such as the World Robotic Sailing Championship have stimulated a variety of groups to work on research and development around autonomous sailing robots, which involves boat designers, naval architects, electrical engineers and computer scientists. While many of the challenges in building a truly autonomous sailboat are still unsolved, the book presents the state of the art of research and development within platform optimization, route and stability planning, collision avoidance, power management and boat control.

Alan Parsons' Art & Science of Sound Recording Julian Colbeck, Alan Parsons, 2014-09-01 (Technical Reference). More than simply the book of the award-winning DVD set, *Art & Science of Sound Recording*, the Book takes legendary engineer, producer, and artist Alan Parsons' approaches to sound recording to the next level. In book form, Parsons has the space to include more technical background information, more detailed diagrams, plus a complete set of course notes on each of the 24 topics, from *The Brief History of Recording* to the now-classic *Dealing with Disasters*. Written with the DVD's coproducer, musician, and author Julian Colbeck, ASSR, the Book offers readers a classic big picture view of modern recording technology in conjunction with an almost encyclopedic list of specific techniques,

processes, and equipment. For all its heft and authority authored by a man trained at London's famed Abbey Road studios in the 1970s ASSR, the Book is also written in plain English and is packed with priceless anecdotes from Alan Parsons' own career working with the Beatles, Pink Floyd, and countless others. Not just informative, but also highly entertaining and inspirational, ASSR, the Book is the perfect platform on which to build expertise in the art and science of sound recording.

Modelling, Simulation and Data Analysis in Acoustical Problems Claudio Guarnaccia, Lamberto Tronchin, Massimo Viscardi, 2020-06-23 Modelling and simulation in acoustics is currently gaining importance. In fact, with the development and improvement of innovative computational techniques and with the growing need for predictive models, an impressive boost has been observed in several research and application areas, such as noise control, indoor acoustics, and industrial applications. This led us to the proposal of a special issue about “Modelling, Simulation and Data Analysis in Acoustical Problems”, as we believe in the importance of these topics in modern acoustics’ studies. In total, 81 papers were submitted and 33 of them were published, with an acceptance rate of 37.5%. According to the number of papers submitted, it can be affirmed that this is a trending topic in the scientific and academic community and this special issue will try to provide a future reference for the research that will be developed in coming years.
