Visceral Perception György Ádám, 1998-06-30 Text examining findings on viscerosensory phenomena, a type of sensory system active within the internal organs that appears to be independent of the traditional senses.

Brain and Behaviour G. Ádám, I. Mészáros, É. I. Bányai, 2013-10-22 *Advances in Physiological Sciences*, Volume 17: *Brain and Behaviour* documents the proceedings of the 28th International Congress of Physiological Sciences, held in Budapest 1980. This volume begins by discussing learning in isolated neuronal structures, and then explains the developmental plasticity of central nervous system. The mechanisms of conditioning, learning, and memory are then examined, which is followed by a topic on visceral learning. This book then introduces cortical sensory-motor integration, and then elaborates on this subject by explaining related topics such as caudato-cortical interrelations and functional organization of conditioned placing reaction. This text concludes with three parts examining the functions of mammalian associative cortex; psychophysiology of motivation; and electrophysiological basis of verbal and cognitive behavior. This book will be invaluable to students and experts in the fields of physiology and medicine.

Suggestion and Suggestibility Vladimir A. Gheorghiu, Petra Netter, Hans J. Eysenck, Robert Rosenthal, 2012-12-06 This book contains the proceedings of the First International Symposium on Suggestion and Suggestibility, held at the University of Giessen in the Federal Republic of Germany, July 7-11 1987, upon the initiative of and organized by Dr. V. A. Gheorghiu and Dr. P. Netter. I regret that for personal reasons I was unable to accept his kind invitation to attend, for Dr. Gheorghiu and I are old

friends. I am pleased, however, to have this opportunity to call attention to the significance of this volume. Most of the chapters were presented in approximately their present form at the symposium, though some have been extensively revised for publication. It was a wise choice to divide the papers into four major sections. - I. Theoretical and Historical Perspectives, II. Assessment and Individual Differences of Suggestibility, III. Psychophysiological Aspects of Suggestibility, and IV. Social and Cognitive Aspects of Suggestive Processes - each with a summarizing commentary. In view of the variety and difficulty of the individual papers, it is a help to have the integration provided by these commentaries - on Part I by Sheehan (Chap. 7), on Part II by Lundy (Chap. 13), on Part III by Edmonston (Chap. 19), and on Part IV by Fiedler (Chap. 30).

The Tight Junction and Its Proteins: More Than Just a Barrier Michael Fromm, Susanne M. Krug, 2020-11-20 For a long time, the tight junction (TJ) was known to form and regulate the paracellular barrier between epithelia and endothelial cell sheets. Starting shortly after the discovery of the proteins forming the TJ—mainly the two families of claudins and TAMPs—several other functions have been discovered, a striking one being the surprising finding that some claudins form paracellular channels for small ions and/or water. This Special Issue includes 43 articles covering numerous dedicated topics including pathogens affecting the TJ barrier, TJ regulation via immune cells, the TJ as a therapeutic target, TJ and cell polarity, function and regulation by proteins of the tricellular TJ, TJ as a regulator of cellular processes, organ- and tissue-specific functions, TJ as sensors and reacting to environmental conditions, and last but not least, TJ proteins and cancer.

Hypnosis Irving Kirsch, 2017-07-05 Modern hypnosis can be traced back to the 18th century and during this period mesmerism, as it was then known, was a healing practice which spread throughout Europe and North America. Since then hypnosis has been treated primarily as a psychological phenomenon and theories about hypnosis are grounded in mainstream psychology and its related disciplines. Most recently it has been subject to extensive clinical trials to investigate its therapeutic effectiveness. In their comprehensive introduction to this invaluable collection the editors trace the historical development of hypnosis, providing an excellent review of the theories that have tried to explain how hypnosis works and reflecting on the cultural and scientific attitudes and practices that prevailed at various times. They have selected the most important previously published papers that reveal how a scientific approach to understanding hypnosis as a psychological phenomenon has emerged over the last 70 years. They have also included a selection of reports on clinical applications and on legal and forensic issues. As such this volume will prove an invaluable reference resource for researchers and students already in the field and new scholars interested in learning more about hypnosis.

The Use and Utility of Ultimata in Coercive Diplomacy Tim Sweijs, 2023-05-12 Ultimata feature as a core concept in the coercive diplomacy scholarship. Conventional wisdom holds that pursuing an ultimatum strategy is risky. This book shows that the conventional wisdom is wrong on the basis of a new dataset of 87 ultimata issued from 1920–2020. It provides a historical examination of ultimata in Western strategic, political, and legal thought since antiquity until the present, and offers a four-pronged typology that explains their various purposes and effects: 1) the dictate, 2) the conditional war declaration, 3) the bluff,

and 4) the brinkmanship ultimatum. The book yields a better understanding of interstate threat behaviour at a time of surging competition. Background materials can be consulted at www.coercivediplomacy.com.

Rethinking the 'Coloured Revolutions' David Lane, Stephen White, 2013-09-13 The communist world was supposed to have had its 'revolution' in 1989. But the demise of the Soviet Union came two years later, at the end of 1991; and then, perplexingly, a series of irregular executive changes began to take place the following decade in countries that were already postcommunist. The focus in this collection is the changes that took place in Serbia, Georgia, Ukraine and Kyrgyzstan between 2000 and 2005 that have together been called the 'coloured revolutions': of no particular colour in Serbia, but Rose in Georgia, Orange in Ukraine and Tulip in Kyrgyzstan. Apart from exploring political change in the 'coloured revolution' countries themselves, the contributors to this collection focus on countries that did not experience this kind of irregular executive change but which might otherwise be comparable (Belarus and Kazakhstan among them), and on reactions to 'democracy promotion' in Russia and China. Throughout, an effort is made to avoid taking the 'coloured revolutions' at face value, however they may have been presented by local leaders and foreign governments with their own agendas; and to place them within the wider literature of comparative politics. This book was previously published as a special issue of *Journal of Communist Studies and Transition Politics*.

The Oxford Handbook of Space Security Saadia M. Pekkanen, 2024 The Oxford Handbook of Space Security focuses on the interaction between space technology and international and national security processes. Saadia M. Pekkanen and P.J. Blount have gathered a group of key scholars who bring a range of

analytical and theoretical perspectives to take an analytically-eclectic approach to assessing space security from an international relations (IR) theory perspective. Bringing together scholarship from a group of leading experts, this volume explains how these contemporary changes will affect future security in, from, and through space.

Reductionism and Systems Theory in the Life Sciences Paul Hoyningen-Huene,Franz M.

Wuketits,2012-12-06 The present volume aims at giving a discussion of the problems of reductionism in contemporary life sciences. It contains six papers which deal with reduction/reductionism in different fields of biological research. Also, the holistic perspective, i. e. the systems view, is discussed in some of the papers. The message of this discussion is that - whereas reductionism is indeed an important strategy - the systems approach is needed. It is argued by some of the authors that organisms are complex systems and not just heaps of molecules, so that the analytical method does not suffice. Recent developments in systems theory offer the possibility to install a more comprehensive view of living systems what can be seen particularly in the field of evolutionary biology. It is true that any organismic activity is molecular, this is to say that it is based on molecular mechanisms. But it is also true that the whole organism displays certain patterns of behavior which are not just molecular. Any organism can be described as a system of different levels of organization different levels of order and complexity - and it is important, therefore, to study all of the organizational levels and to see their peculiarities. It should be obvious, however, that there is not one

problem of reduction/reductionism, but that there are many problems linked together and that these problems appear at different levels of biological research and bio philosophical reflections.
