A Genetic Algorithm for Network Transport Protocol Parameter Optimization Adrián Granados Murillo, 2009 ABSTRACT: The fields of wireless communications and mobile networking are rapidly growing and changing. In a mobile Ad hoc network, the variation of link characteristics, and frequent and unexpected changes in topology, decreases the performance of commonly used transport protocols, which assume that packet drops occur only in the event of network congestion. Link failure and higher bit error rates may also induce a sudden increase of packet losses, triggering the activation of congestion avoidance mechanisms that reduce the overall transmission rate. In general, a transport protocol has numerous configuration parameters (e.g. window size, retransmission timeout, etc.) that can be adjusted to compensate for these environment effects. Thus, the challenge is to identify what is the best configuration (i.e. combination of parameter values) for a given scenario. In this work, an optimization approach based on genetic algorithms is used to automatically tune, in real time, the parameter values of a transport protocol so that it can adapt itself to different operating conditions. When compared to an exhaustive search over a reduced problem space, the experimental results show that the proposed algorithm can identify the optimal configuration settings to maximize throughput for end-to-end wireless communication over multiple hops.

Advances in Intelligent Modelling and Simulation
Aleksander Byrski, Zuzana Oplatková, Marco Carvalho, Marek Kisiel-Dorohinicki, 2012-04-25 The human capacity to abstract complex systems and phenomena into simplified models has played a critical role in the rapid evolution of our modern industrial processes and scientific research. As a

science and an art, Modelling and Simulation have been one of the core enablers of this remarkable human trace, and have become a topic of great importance for researchers and practitioners. This book was created to compile some of the most recent concepts, advances, challenges and ideas associated with Intelligent Modelling and Simulation frameworks, tools and applications. The first chapter discusses the important aspects of a human interaction and the correct interpretation of results during simulations. The second chapter gets to the heart of the analysis of entrepreneurship by means of agent-based modelling and simulations. The following three chapters bring together the central theme of simulation frameworks, first describing an agent-based simulation framework, then a simulator for electrical machines, and finally an airborne network emulation environment. The two subsequent chapters discuss power distribution networks from different points of view|anticipation and optimization of multi-echelon inventory policy. After that, the book includes also a group of chapters discussing the mathematical modelling supported by verification simulations, and a set of chapters with models synthesised by means of artificial intelligence tools and complex automata framework. Lastly, the book includes a chapter introducing the use of graph-grammar model for generation of three-dimensional computational meshes and a chapter focused on the experimental and computational results regarding simulation of aero engine vortexes. Authors believe, that this book is a valuable reference to researchers and practitioners in the field, as well as an inspiration to those interested in the area of Intelligent Modelling and Simulation.

La fuga del Chapo Raymundo Riva
Palacio, 2015-11-13 La fuga de Joaquín Guzmán Loera la noche del 11 de julio de 2015 de la prisión de El Altiplano se ha transformado en un ícono de la

debacle de la política de seguridad en el México de Enrique Peña Nieto. El multipremiado periodista Raymundo Riva Palacio explica en este libro cómo fue posible la segunda evasión del Chapo Guzmán, y revela el deterioro al que han sido sometidos los sistemas de seguridad penitenciarios durante el gobierno de Enrique Peña Nieto. He aquí la crónica de una fuga que empezó a prepararse mucho tiempo antes de que capturaran a Joaquín Guzmán Loera en febrero de 2014. Raymundo Riva Palacio comienza el recorrido en 2012, cuando se aprobó que la Secretaría de Gobernación absorbiera a la de Seguridad Pública Federal. A pesar de que esta última era la más importante en crecimiento, quedó reducida a una Comisión Nacional, desde donde se produjo un desmantelamiento sistémico de la seguridad en los penales, el relajamiento de las barreras legales contra los criminales y el otorgamiento de privilegios inexplicables. El túnel que usó el célebre narcotraficante fue la vía rápida hacia la peor crisis del sexenio: exhibió no sólo el desastre del diseño institucional, sino la frivolidad con la que actuaron en su construcción. Fueron tantas las alertas emitidas y tantos los sistemas que fallaron a la vez, que resulta demasiado grande el error para que sea circunstancial. Quedará así, como un ícono de la debacle de la política de seguridad, lo que pasó la noche del 11 de julio de 2015 en El Altiplano, con el inolvidable grito de fondo del comisionado Hernández Mora a la coordinadora de reclusorios, Celina Oseguera Parra: ¡Benito no se ve en los monitores!. El Chapo Guzmán se había vuelto a escapar.
