**Emergence - Book One of the Alicorn Quest** William R Jenkins Jr,2023-12-08 In a bygone age, India's forests whispered tales of unicorns. The magic nestled within their spiralled horns was legendary, with villagers weaving tales of its mesmerizing properties. But these stories also painted targets on the creatures. Driven by greed, hunters came in droves, seeking the power in those horns. With every stolen horn, they boasted their conquests, leaving a trail of slain unicorns and bystanders in their wake. Darkness soon descended upon the forest, and the once-celebrated unicorns faded into myths. Yet hope endured through ancient prophecies predicting the unicorns' return. Symbols of their resurgence - a golden seven-pointed star and a bangle adorned with horse and unicorn carvings - were foretold to re-emerge. And in November 1861, these artifacts surfaced from the ocean's depths, heralding the start of The Alicorn Quest. This epic journey follows a young Indian adventurer's quest to an unfamiliar Oregon, where destiny awaits in the form of a unique colt. As adversaries thwart his path, this colt, unaware of his future, grazes in Oregon's

*Outrageous Fortune* William Ian Miller,2020-11-02 In this book, William Ian Miller offers his reflections on the perverse consequences, indeed often the opposite of intended effects, of so-called 'good things'. Noted for his remarkable erudition, wit, and playful pessimism, Miller here ranges over topics from personal disasters to literary and national ones. Drawing on a truly immense store of knowledge encompassing literature, philosophy, theology, and history, he excavates the evidence of human anxieties around scarcity in all its forms (from scarcity of food to luck to where we stand in the eyes of others caught in a game of musical chairs we often do not even know we are playing). With wit and sensitivity, along with a large measure of fearless self-scrutiny, he points to and invites us to recognize the gloomy, neurotic, despondent tendencies of reasonably sentient human life. The book is a careful examination of negative beliefs, inviting an experience of bleak fellow-feeling among the author, the reader and many a hapless soul across the centuries. Just what makes you more nervous, he asks, a run of good luck, or a run of bad?

The History of the Franks Gregory of Tours,1974-11-28 Written following the collapse of Rome's secular control over western Europe, the History of Gregory (c. AD 539-594) is a fascinating exploration of the events that shaped

sixth-century France. This volume contains all ten books from the work, the last seven of which provide an in-depth description of Gregory's own era, in which he played an important role as Bishop of Tours. With skill and eloquence, Gregory brings the age vividly to life, as he relates the exploits of missionaries, martyrs, kings and queens – including the quarrelling sons of Lothar I, and the ruthless Queen Fredegund, third wife of Chilperic. Portraying an age of staggering cruelty and rapid change, this is a powerful depiction of the turbulent progression of faith at a time of political and social chaos.

Optimization Based Framework for the Classification of Human Emotion in Facial Images MR C Agilan, 2024-02-13 People's daily lives are heavily reliant on communication. When humans communicate with one another, they display a variety of emotions. Recognizing emotions is a fascinating and difficult undertaking. Text, speech, facial expressions, gestures, and biological signals can all be used. Affective computing and technology have grown increasingly crucial in understanding human behavior during the last decade. Patient monitoring, driver fatigue detection, robotics, animation, forensics, medical aid, psychology, surveillance, automotive industry, Human-Robot Interaction for children with autism, situation analysis of social interaction, affective computing, feedback during E-Learning, psychology, contests, and entertainment industries have all benefited from emotion recognition research. Many academics have been driven in recent days to construct an innovative and robust generic and application-specific affective computing system in conjunction with Emotion Intelligence. Emotion is a strong, subjective, and changing feeling state that communicates the importance of good or negative stimuli. The physical cause of emotion origin in the human brain must be investigated. Robots are stimulated in the same way since they are supposed to work in an environment and be able to engage with humans on an emotional level. Important variables include social learning, gesture and natural language communication, emotion perception, and synthesis of interacting partners.
