Get to Aha!: Discover Your Positioning DNA and Dominate Your Competition Andy Cunningham,2017-09-29 From the marketing strategist who helped Steve Jobs launch the original Apple Macintosh comes a groundbreaking guide to positioning any company for industry dominance Andy Cunningham has been at the forefront of tech and innovation since day one, and she's been helping companies create new product categories ever since. Now she reveals the winning framework she uses to transform markets and industries. Get to Aha! shows how to establish the kind of foundation world-class brands are built on. Too many business leaders fail to ask the most basic questions about

their company—Who are we? And why do we matter?—before they leap right into branding. Big mistake. A company must first know itself (establish its position) before it can express its identity (execute its branding). There are three types of companies in the world, each with its own DNA: Mothers are customer-oriented, Mechanics are product-oriented, and Missionaries are concept-oriented—and it's absolutely critical for business leaders to know which type their company is to create an authentic and ultimately “sticky” position in the market. A company's DNA is the key to achieving this and with it, a competitive advantage. Why? Because if a Mechanic creates a marketing campaign based on its belief that it is a Missionary, the underlying positioning will not ring true and the company won't gain a foothold in the market. But if a company positions itself in alignment with its DNA, it will resonate authentically and establish its role and relevance even in the face of a major competitor. Get to Aha! presents a clear step-by-step framework that will help you determine your company's precise position in the marketing landscape, using Andy's DNA-based methodology. It takes you through the process of performing “genetic testing” on your company, examining the market through the six Cs of positioning, and developing your positioning statement—a rational, factual statement about your company's role and relevance. Then and only then can you create a branding and marketing strategy that will build market momentum and crush the competition. Trust Andy. Steve Jobs did.

Nutritionism Gyorgy Scrinis, 2013-06-18 Popularized by Michael Pollan in his best-selling *In Defense of Food*, Gyorgy Scrinis's concept of nutritionism refers to the reductive understanding of nutrients as the key indicators of healthy food—an approach that has dominated nutrition science, dietary advice, and food marketing. Scrinis argues this ideology has narrowed and in some cases distorted our appreciation of food quality, such that even highly processed foods may be perceived as healthful depending on their content of good or bad nutrients. Investigating the butter versus margarine debate, the battle between low-fat, low-carb, and other weight-loss diets, and the food industry's strategic promotion of nutritionally enhanced foods, Scrinis reveals the scientific, social, and economic factors driving our modern fascination with nutrition. Scrinis develops an original framework and terminology for analyzing the characteristics and consequences of nutritionism since the late nineteenth century. He begins with the era of quantification, in which the idea of protective nutrients, caloric reductionism, and vitamins' curative effects took shape. He follows with the era of good and bad nutritionism, which set nutrient-centric dietary guidelines and defined the parameters of unhealthy nutrients; and concludes with our current era of functional nutritionism, in which the focus has shifted to targeted nutrients, superfoods, and optimal diets. Scrinis's research underscores the critical role of nutrition science and dietary advice in shaping our relationship to food and our bodies and in heightening our nutritional anxieties. He ultimately shows how nutritionism has aligned the demands and perceived needs of consumers with the commercial interests of food manufacturers and corporations. Scrinis also offers an alternative paradigm for assessing the healthfulness of foods—the food quality paradigm—that privileges food production and processing quality, cultural-traditional knowledge, and sensual-practical experience, and promotes less reductive forms of nutrition research and dietary advice.
