Soft Is Fast Meredith Morse,2023-08-15 An innovative analysis of Simone Forti's interdisciplinary art, viewing her influential 1960s “dance constructions” as negotiating the aesthetic strategies of John Cage and Anna Halprin. Simone Forti's art developed within the overlapping circles of New York City's advanced visual art, dance, and music of the early 1960s. Her “dance constructions” and related works of the 1960s were important for both visual art and dance of the era. Artists Robert Morris and Yvonne Rainer have both acknowledged her influence. Forti seems to have kept one foot inside visual art's frames of meaning and the other outside them. In *Soft Is Fast*, Meredith Morse adopts a new way to understand Forti's work, based in art historical analysis but drawing upon dance history and cultural studies and the history of American social thought. Morse argues that Forti introduced a form of direct encounter that departed radically from the spectatorship proposed by Minimalism, and prefigured the participatory art of recent decades. Morse shows that Forti's work negotiated John Cage's ideas of sound, score, and theater through the unique approach to movement, essentially improvisational and grounded in anatomical exploration, that she learned from performer and teacher Ann (later Anna) Halprin. Attentive to Robert Whitman's and La Monte Young's responses to Cage, Forti reshaped Cage's concepts into models that could accommodate Halprin's charged spaces and imagined, interpenetrative understanding of other bodies. Morse considers Forti's use of sound and her affective use of materials as central to her work; examines Forti's text pieces, little discussed in art historical literature; analyzes *Huddle*, considered one of Forti's signature works; and explicates Forti's later improvisational practice. Forti has been relatively overlooked by art historians, perhaps because of her work's central concern with modes of feeling and embodiment, unlike other art of the 1960s, which was characterized by strategies of depersonalization and affectlessness. *Soft Is Fast* corrects this critical oversight.

**Soft Soil, Black Grapes** Simone Cinotto,2014-05-02 Winner of the 2013 New York Book Show Award in Scholarly/Professional Book Design From Ernest and Julio Gallo to Francis Ford Coppola, Italians have shaped the history of California wine. More than any other group, Italian immigrants and their families have made California viticulture one of America's most distinctive and vibrant achievements, from boutique vineyards in the Sonoma hills to the massive industrial wineries of the Central Valley. But how did a small group of nineteenth-century immigrants plant the roots that flourished into a world-class industry? Was there something particularly “Italian” in their success? In this fresh, fascinating account of the ethnic origins of California wine, Simone Cinotto rewrites a century-old triumphalist story. He demonstrates that these Italian visionaries were not skilled winemakers transplanting an immemorial agricultural tradition, even if California did resemble the rolling Italian countryside of their native Piedmont. Instead, Cinotto argues that it was the wine-makers' access to “social capital,” or the ethnic and familial ties that bound them to their rich wine-growing heritage, and not financial leverage or direct enological experience, that enabled them to develop such a successful and influential wine business. Focusing on some of the most important names in wine history—particularly Pietro Carlo Rossi, Secondo Guasti, and the Gallos—he chronicles a story driven by ambition and creativity but realized in a complicated tangle of immigrant entrepreneurship, class struggle, racial inequality, and a new world of consumer culture. Skillfully blending regional, social, and immigration history, *Soft Soil, Black Grapes* takes us on an original journey into the cultural construction of ethnic economies and markets, the social dynamics of American race, and the fully transnational history of American wine.

**Simone'** Carlotta Maria Shinn Russell,2016-12-02 This is a journey through love, romance, passion, and heartache. The journey of life, which started at fourteen years of age, would take Simone' and her family into a maze of pain, heartache, and separation because of choices in love and decisions made while she was young and inexperienced, even to the decisions made after her marriage to protect her family. She found herself in an endless vortex, a downward spiral laced with fear because of the fervent love she had for her family. She felt trapped like a bird in a cage. These decisions were almost detrimental to her daughter and her husband whom she loved with all her soul. Instead of protecting those she loved, her decisions had painful consequences rather than healing remedies. The influencing actions and devastating circumstances all surrounded and involved one woman, who wore a veil of mystery, even to her Father.

**Soft Tissue Tumors** Simone Mocellin,2020-12-17 The “world” of soft tissue sarcomas is a highly complex one, due to the large range of tumor types, each of which is characterized by specific features in terms of its epidemiology, pathology diagnosis, clinical behavior, therapy and biomarker pattern (of both diagnostic and therapeutic value). This book offers a practical, clearly structured reference guide, covering all of these aspects for each soft tissue tumor. Thanks to the consistent and user-friendly format, readers can quickly and easily find the information they need; in addition, up-to-date and authoritative literature information helps them to pursue further research. Overall, this book offers professionals and residents in the fields of oncology, surgery, and pathology an essential guide for study, review, and everyday clinical practice.

**Biology-Driven Targeted Therapy of Pediatric Soft-Tissue and Bone Tumors: Current Opportunities and Future Challenges** Thomas G. P. Grünwald,Simone Fulda,2016-04-05 Recent advances in the understanding of the biological basis of pediatric soft-tissue and bone tumors, especially owing to the advent of “omics” technologies, have led to an exponential increase in the current knowledge on the genetic and cellular patho-mechanisms that drive these diseases. This offers the unprecedented opportunity to develop and implement targeted therapies such as monoclonal antibodies, small molecules, oncolytic viruses, and immunotherapies in standard and/or personalized treatment regimens. However, to date only a few examples document a successful translation of discoveries from the bench to the bedside. Recent international expert congresses further emphasize the urgent need for a more rapid and especially more successful translational process. Hence, we strongly believe that a Frontiers Research Topic aiming at this aspect would fit just in time and be relevant for a broad readership. This Frontiers Research Topic intended to provide a platform for active and interdisciplinary discussion, to summarize current state-of-the-art knowledge on all basic research and translational aspects in pediatric soft-tissue and bone tumors, and to offer new perspectives on how to further promote and accelerate the translational process. It comprises high-quality original articles and timely reviews.

Non-equilibrium Phenomena in Confined Soft Matter Simone Napolitano,2015-08-28 This book deals with those properties of non-equilibrium soft matter that deviate greatly from the bulk properties as a result of nanoscale confinement.The ultimate physical origin of these confinement effects is not yet fully understood. At the state of the art, the discussion on confinement effects focuses on equilibrium properties, finite size effects and interfacial interactions. However this is a limited vision which does not fully capture the peculiar behaviour of soft matter under confinement and some exotic phenomena that are displayed. This volume will be organized in the following three main themes. Equilibration and physical aging: treating non-equilibrium via the formal methodology of statistical physics in bulk, we analyse physical origin of the non-equilibrium character of thin polymer. We then focus on the impact of nanoconfinement on the equilibration of glasses of soft matter (a process of tremendous technological interest, commonly known as physical aging), comparing the latest trends of polymers in experiments, simulations with those of low-molecular weight glass formers. Irreversible adsorption: the formation of stable adsorbed layers occurs at timescales much larger than the time necessary to equilibrate soft matter in bulk. Recent experimental evidence show a strong correlation between the behaviour of polymers under confinement and the presence of a layer irreversibly adsorbed onto the substrate. This correlation hints at the possibility to tailor the properties of ultrathin films by controlling the adsorption kinetics. The book reports physical aspects of irreversible chain adsorption, such as the dynamics, structure, morphology, and

crystallization of adsorbed layers. Glass transition and material properties: this section of the book focuses on the spread of absolute values in materials properties of confined systems, when measured by different experimental and computation techniques and a new method to quantify the effects of confinement in thin films and nanocomposites independently on the investigation procedure will be presented.

*Living Room* Rachel Sherman, 2011-10-18 “[A] riveting debut novel . . . Unsentimental yet deeply felt, this tale examines what bubbles under the surface of a supposedly happy Long Island family” (Publishers Weekly, starred review). The follow-up to her highly praised debut story collection, *The First Hurt*, Rachel Sherman’s *Living Room* is a beautiful and disarmingly direct portrait of a family in trouble. With the tone of a modern-day Jewish *The Ice Storm* set in Long Island, imbued with Alice Munro’s fascination with personal history, *Living Room* is a deep exploration of the ripple effects of mental illness on a family, as well as a look at generational differences in mating and marriage, and a wry, wise look at suburban angst. “The fractured lives of three generations of women told with zero sentimentality and a huge amount of heart. *Living Room* is edgy, moving, smart, funny and altogether human. Rachel Sherman is the real deal.” —Dani Shapiro, *New York Times*-bestselling author of *Inheritance* “Sherman turns her unflinching, unsentimental eye once again on deepest suburbia, where personal history festers rather than heals. [*Living Room*] hums along, its heavier moments tempered with plenty of dark humor and incisive language; but it’s the intimate character sketches that truly resonate.” —*Time Out* (New York) “Often praised for her lack of sentimentality, Sherman doesn’t hesitate to capture her characters’ weird, unbecoming thoughts . . . Her writing lends itself to the form: her story structures tight as fists, her prose terse and unadorned.” —*The Rumpus*

*Biology of Tumors: Surfaces, Immunology, and Comparative Pathology* Frederick Becker, 2013-04-17 As was shown in the first two volumes of this series, great strides have been made in identifying many of the agents or classes of substances responsible for carcinogenesis and in delineating their interactions with the cell. Clearly, the aim of such studies is that, once identified, these agents can be eliminated from the environment. Yet, despite these advances and the elimination of some important carcinogenic agents, one major problem exists. It is a constant monitor of all oncologic study and diminishes the importance of every experiment and of every clinical observation. As we noted earlier, that problem is our inability to define the malignant cell. It is through studies of the fundamental biology of tumors that we seek this definition. A vast amount of information has been gathered which describes what this cell does and to a lesser extent how it does it. But the why evades us. We have been unable to define the malignant cell, save in broad terms by comparing it to its normal counterpart. The major problem appears to be that the malignant cell does so much. It is a chimera, mystifyingly composed of normal activities and structures, of phenotypic schizophrenia with embryonic, fetal, and adult characteristics and, occasionally, a hint of an unclassifiable capacity unique to malignant cells.

**Non-equilibrium Phenomena in Confined Soft Matter** Simone Napolitano, 2015 This book presents cutting-edge experimental and computational results and provides comprehensive coverage on the impact of non-equilibrium structure and dynamics on the properties of soft matter confined to the nanoscale. The book is organized into three main sections: · Equilibration and physical aging: by treating non-equilibrium phenomena with the formal methodology of statistical physics in bulk, the analysis of the kinetics of equilibration sheds new light on the physical origin of the non-equilibrium character of thin polymer films. Both the impact of sample preparation and that of interfacial interactions are analyzed using a large set of experiments. A historical overview of the investigation of the non-equilibrium character of thin polymer films is also presented. Furthermore, the discussion focuses on how interfaces and geometrical confinement perturb the pathways and kinetics of equilibrations of soft glasses (a process of tremendous technological interest). · Irreversible adsorption: the formation of stable adsorbed layers occurs at timescales much larger than the time necessary to equilibrate soft matter in bulk. The question is posed as to whether this process could be considered as the driving force of equilibration. In this section, the investigation of the physics of irreversible chain adsorption is accompanied by a detailed analysis of the molecular dynamics, structure, morphology, and crystallization of adsorbed layers. · Glass transition and material properties: the discussion covers a broad range of non-equilibrium phenomena affecting different families of soft materials - polymers, low molecular weight glass formers, and liquid crystals. In these systems, geometrical confinement induces the formation of non-equilibrium phases, otherwise not achievable via processing of bulk samples. The examples illustrated in this section show how non-equilibrium phenomena can be exploited as innovative processing parameters to fabricate novel nanomaterials with improved performance. Finally, the differences between experiments performed under equilibrium conditions and temperature scans from equilibrium to non-equilibrium states at the nanoscale are discussed.

**The Hard State, Soft City of Singapore** Simone Shu-Yeng Chung, Mike Douglass, 2020 With Singapore serving as the subject of exploration, *The Hard State, Soft City of Singapore* explores the purview of imaginative representations of the city. Alongside the physical structures and associated practices that make up our lived environment, and conceptualized space engineered into material form by bureaucrats, experts and commercial interests, a perceptual layer of space is conjured out of people's everyday life experiences. While such imaginative projections may not be as tangible as its functional designations, they are nonetheless equally vital and palpable. The richness of its inhabitants' memories, aspirations and meaningful interpretations challenges the reduction of Singapore as a Generic City. Taking the imaginative field as the point of departure, the forms and modes of intellectual and creative articulations of Singapore's urban condition probe the resilience of cities and the people who reside in them, through the images they convey or evoke as a means for collective expressions of human agency in placemaking.

**The Subversive Simone Weil** Robert Zaretsky,2021-02-23 Known as the "patron saint of all outsiders," Simone Weil (1909-43) was one of the twentieth century's most remarkable thinkers, a philosopher who truly lived by her political and ethical ideals. In a short life framed by the two world wars, Weil taught philosophy to lycée students and organized union workers, fought alongside anarchists during the Spanish Civil War and labored alongside workers on assembly lines, joined the Free French movement in London and died in despair because she was not sent to France to help the Resistance. Though Weil published little during her life, after her death, thanks largely to the efforts of Albert Camus, hundreds of pages of her manuscripts were published to critical and popular acclaim. While many seekers have been attracted to Weil's religious thought, Robert Zaretsky gives us a different Weil, exploring her insights into politics and ethics, and showing us a new side of Weil that balances her contradictions—the rigorous rationalist who also had her own brand of Catholic mysticism; the revolutionary with a soft spot for anarchism yet who believed in the hierarchy of labor; and the humanitarian who emphasized human needs and obligations over human rights. Reflecting on the relationship between thought and action in Weil's life, *The Subversive Simone Weil* honors the complexity of Weil's thought and speaks to why it matters and continues to fascinate readers today.

**The Italian American Table** Simone Cinotto,2013-10-30 Best Food Book of 2014 by The Atlantic Looking at the historic Italian American community of East Harlem in the 1920s and 30s, Simone Cinotto recreates the bustling world of Italian life in New York City and demonstrates how food was at the center of the lives of immigrants and their children. From generational conflicts resolved around the family table to a vibrant food-based economy of ethnic producers, importers, and restaurateurs, food was essential to the creation of an Italian American identity. Italian American foods offered not only sustenance but also powerful narratives of community and difference, tradition and innovation as immigrants made their way through a city divided by class conflict, ethnic hostility, and racialized inequalities. Drawing on a vast array of resources including fascinating, rarely explored primary documents and fresh approaches in the study of consumer culture, Cinotto argues that Italian immigrants created a distinctive culture of food as a symbolic response to the needs of immigrant life, from the struggle for personal and group identity to the pursuit of social and economic power. Adding a transnational dimension to the study of Italian American foodways, Cinotto recasts Italian American food culture as an American invention resonant with traces of tradition.

**God Is a Heartless Recluse** John Likides,2017-10-17 The story of an atheists search for universal ethics, *God Is a Heartless Recluse* demonstrates that theists claim of God as their Heavenly Father is delusional. A god who allows terminal childhood diseases, mass murderers, cannibals, and genocides is at best a heartless recluse. In reality, God is a figment of megalomaniacal minds that don't have the courage to accept the facts: Humans evolved from earlier primates. God is a human invention: animism, panpsychism, pantheism, polytheism, monotheism. The universe is indifferent to humanity. Paradise is a fictional luxury resort. Humanity is an adolescent civilization with the potential to mature, spread across the Milky Way, then to other galaxies and other universes to live forever in this eternal multiverse.
