Handbook Of Pattern Recognition And Computer Vision (2nd Edition) Chi Hau Chen, Louis-francois Pau, Patrick S P Wang, 1999-03-12 The very significant advances in computer vision and pattern recognition and their applications in the last few years reflect the strong and growing interest in the field as well as the many opportunities and challenges it offers. The second edition of this handbook represents both the latest progress and updated knowledge in this dynamic field. The applications and technological issues are particularly emphasized in this edition to reflect the wide applicability of the field in many practical problems. To keep the book in a single volume, it is not possible to retain all chapters of the first edition. However, the chapters of both editions are well written for permanent reference. This indispensable handbook will continue to serve as an authoritative and comprehensive guide in the field.

Introduction to Geological Uncertainty Management in Reservoir Characterization and Optimization Reza Yousefzadeh, Alireza Kazemi, Mohammad Ahmadi, Jebraeel Gholinezhad, 2023-04-08 This book explores methods for managing uncertainty in reservoir characterization and optimization. It covers the fundamentals, challenges, and solutions to tackle the challenges made by geological uncertainty. The first chapter discusses types and sources of uncertainty and the challenges in different phases of reservoir management, along with general methods to manage it. The second chapter focuses on geological uncertainty, explaining its impact on field development and methods to handle it using prior information, seismic and petrophysical data, and geological parametrization. The third chapter deals with reducing geological uncertainty through history matching and the various methods used, including closed-loop management, ensemble assimilation, and stochastic optimization. The fourth chapter presents dimensionality reduction methods to tackle high-dimensional geological realizations. The fifth chapter covers field development optimization using robust optimization, including solutions for its challenges such as high computational cost and risk attitudes. The final chapter introduces different types of proxy models in history matching and robust optimization, discussing their pros and cons, and applications. The book will be of interest to researchers and professors, geologists and professionals in oil and gas production and exploration.

Genetic Programming for Image Classification Ying Bi, Bing Xue, Mengjie Zhang, 2021-02-08 This book offers several new GP approaches to feature learning for image classification. Image classification is an important task in computer vision and machine learning with a wide range of applications. Feature learning is a fundamental step in image classification, but it is difficult due to the high variations of images. Genetic Programming (GP) is an evolutionary computation technique that can automatically evolve computer programs to solve any given problem. This is an important research field of GP and image classification. No book has been published in this field. This book shows how different techniques, e.g., image operators, ensembles, and surrogate, are proposed and employed to improve the accuracy and/or computational efficiency of GP for image classification. The proposed methods

are applied to many different image classification tasks, and the effectiveness and interpretability of the learned models will be demonstrated. This book is suitable as a graduate and postgraduate level textbook in artificial intelligence, machine learning, computer vision, and evolutionary computation.

Stone Matrix Asphalt Krzysztof Blazejowski, 2016-04-19 In the years since the development and subsequent success of Stone Matrix Asphalt (SMA), a plethora of articles have emerged, scattered throughout various publications. The time is right for a comprehensive resource that collects, examines, and organizes this information and makes it easily accessible. A compilation and distillation of the latest knowledge available, *Stone Matrix Asphalt: Theory and Practice* describes SMA, from its origin through implementation, and explores various methods and design approaches. Detailing the requirements and materials for the mix, including asphalt binder, aggregates, and stabilizers, the book covers standard and alternative design methods and their execution, as well as best practices and production processes. It addresses issues such as permanent deformation and fatigue resistance, as well as special applications, such as bridge deck surfacing and airfields. The book uses practical examples to illustrate theory, presents practical tips useful in everyday work, and includes a review of problems that can occur during laydown, and their potential solutions. Drawn from the author's extensive experience during the introduction of SMA in the early 1990s and discussions with many process engineers, the book provides the practical information needed to customize methods for individual applications of SMA. Blazejowski puts together a picture, drawn from a broad range of literature. The result: a reference that is handy, practical, and easy to use.

Biophysics of DNA-Protein Interactions Mark C. Williams, L. James Maher, III, 2010-10-05 Despite the rapid expansion of the field of biophysics, there are very few books that comprehensively treat specific topics in this area. Recently, the field of single molecule biophysics has developed very quickly, and a few books specifically treating single molecule methods are beginning to appear. However, the promise of single molecule biophysics is to contribute to the understanding of specific fields of biology using new methods. This book would focus on the specific topic of the biophysics of DNA-protein interactions, and would include the use of new approaches, including both bulk methods as well as single molecule methods. This would make the book attractive to anyone working in the general area of DNA-protein interactions, which is of course a much wider market than just single molecule biophysicists or even biophysicists. The subject of the book will be the biophysics of DNA-protein interactions, and will include new methods and

results that describe the physical mechanism by which proteins interact with DNA. For example, there has been much recent work on the mechanism by which proteins search for specific binding sites on DNA. A few chapters will be devoted to experiments and theory that shed light on this important problem. We will also cover proteins that alter DNA properties to facilitate interactions important for transcription or replication. Another section of the book will cover the biophysical mechanism by which motor proteins interact with DNA. Finally, we will cover larger protein-DNA complexes, such as replication forks, recombination complexes, DNA repair interactions, and their chromatin context.

Asphaltene Deposition Francisco M. Vargas, Mohammad Tavakkoli, 2018-05-16 As global consumption of fossil fuels such as oil increases, previously abundant sources have become depleted or plagued with obstructions. Asphaltene deposition is one of such obstructions which can significantly decrease the rate of oil production. This book offers concise yet thorough coverage of the complex problem of asphaltene precipitation and deposition in oil production. It covers fundamentals of chemistry, stabilization theories and mechanistic approaches of asphaltene behavior at high temperature and pressure. Asphaltene Deposition: Fundamentals, Prediction, Prevention, and Remediation explains techniques for experimental determination of asphaltene precipitation and deposition and different modeling tools available to forecast the occurrence and magnitude of asphaltene deposition in a given oil field. It discusses strategies for mitigation of asphaltene deposition using chemical inhibition and corresponding challenges, best practices for asphaltene remediation, current research, and case studies.

Power, Choice and Vulnerability Peter Winchester, 2014-04-23 Natural disasters make dramatic reading. Every year, some area of the world is devastated by a disaster, with enormous consequent loss of life and disruption to livelihoods. What can be done to alleviate this? Why are such disasters so lethal? Why do people expose themselves to such hazards? Do mitigation programmes help? What effect does aid really have on the areas that receive it? By examining one particular cyclone-prone area of Southern India in great detail over a 10-year period Peter Winchester has come up with some perceptive answers to the questions. In particular, he formulates a set of five 'golden rules' for disaster management. The book will provide valuable and thought-provoking reading for anyone involved with disaster management, and will be essential for all those whose work involves aid or development in disaster-prone areas.

Active Perception Yiannis Aloimonos, 2013-05-13 This book defines the emerging field of Active Perception which calls for studying perception coupled with action. It is devoted to technical problems related to the design and analysis of intelligent systems possessing perception such as the existing biological organisms and the seeing machines of the future. Since the appearance of the first technical results on active vision, researchers began to realize that perception -- and intelligence in general -- is not transcendental and disembodied. It is becoming clear that in the effort to build intelligent visual systems, consideration must be given to the fact that perception is intimately related to the physiology of the perceiver and the tasks that it performs. This viewpoint -- known as Purposive,

Qualitative, or Animate Vision -- is the natural evolution of the principles of Active Vision. The seven chapters in this volume present various aspects of active perception, ranging from general principles and methodological matters to technical issues related to navigation, manipulation, recognition, learning, planning, reasoning, and topics related to the neurophysiology of intelligent systems.

Cinémas du Moyen-Orient Yves Thoraval, 2000 Les cinématographies d'Iran, d'Egypte et de Turquie, les trois pays les plus importants du Moyen-Orient, offrent un reflet des aspirations et de la vie des deux cents millions de citoyens qui y vivent en 2000. Ce livre vise à offrir aux cinéphiles, programmeurs, distributeurs, décideurs audiovisuels et à quiconque est curieux du Moyen-Orient contemporain, une introduction aux cinéastes et aux films de fiction réalisés dans cette région entre 1896 et 2000. Si la production iranienne s'est aujourd'hui hissée à la dixième place mondiale, le cinéma égyptien, confronté à l'envahissement des films hollywoodiens (et indiens), se maintient grâce à une poignée d'auteurs de films populaires enracinés dans les valeurs du pays. Quant au cinéma turc, dont on a pu craindre ces dernières années la disparition faute de financements, il revit aujourd'hui avec une production minime grâce à une nouvelle génération de Jeunes Turcs des deux sexes.

Biological Responses to DNA Damage, 2000 Living cells have evolved many ways of coping with metabolic events and environmental influences that damage DNA. These mechanisms, and the frequent progression to cancer that results when they go awry, are reviewed in this volume by authors from over sixty of the world's leading laboratories. The topics discussed include DNA repair, mutagenesis and other damage-tolerance functions, checkpoint control, apoptosis, and adaptation. They draw from studies on human and yeast cells. Current, but with a valuable historical perspective, this volume has the depth and lasting value typical of this most prestigious series and is essential reading for investigators of DNA replication, cell cycle control, and tumorigenesis.
