**The Evolution of Religion and Morality** Martin Lang, Benjamin Grant Purzycki, Joseph Henrich, Ara Norenzayan, 2023-12-04 This volume draws on a unique dataset to answer pressing questions about human religiosity. Building upon the first volume in this series, it presents results from the second phase of the Evolution of Religion and Morality (ERM) project. The second volume investigates key questions in the evolutionary and cognitive sciences of religion and highlights cultural variability and context specificity of diverse religious systems. Chapters draw on a dataset comprising 2,228 participants from 15 ethnographically diverse societies that stretch from Africa and India through Oceania to South America, and include hunter-gatherers, pastoralists, horticulturalists, subsistence farmers and wage laborers. Four chapters using the full dataset answer the following questions: What are the general predictors of commitment to supernatural agents? Is there a gender gap in religiosity? Does belief in punitive gods facilitates cooperation? Are supernatural agents implicitly associated with moral concerns? Chapters from individual field sites further explore the distinction between moralizing and local gods, the potentially disruptive role of belief in local gods on cooperation with anonymous co-religionists, and the relationship between belief in moralizing gods, cooperation, and differential access to material resources. Above these empirical studies, the book also includes an informed discussion with specialists on the challenges of running such a large cross-cultural project and gives concrete recommendations for future projects. The Evolution of Religion and Morality: Volume II will be a key resource for scholars and researchers of religious studies, human evolutionary biology, psychology, anthropology, the cultural evolution of religion and the sociology of religion. This book was originally published as a special issue of Religion, Brain & Behavior.

**The Effects of Early Environmental Experiences on African-American Neuropsychological Test Performance** Desiree Anastacia Byrd, 2001 Neuropsychologists do not yet understand the sources of ethnic group variation in cognitive test scores. While many factors may influence neuropsychological test performance, environmental factors, such as educational and home histories, are likely to be significant contributors. There is considerable evidence from human and animal research that qualitative aspects of early living environments are related to brain development and contemporaneous measures of neurocognitive functioning. There were three main goals of the present study: (a) to assess relationships between neurocognitive functioning and retrospective reports of early environmental/educational experiences in both African-American (AA) and Caucasian (CA) adults; (b) to identify those environmental variables which characterize AA subjects with relatively poor test performance; and (c) to determine whether adjusting cognitive test scores for hypothesized differences on these early environmental factors reduces the ethnic group performance disparity. Measurements for the present study included cognitive testing data and detailed retrospective early environmental histories on 100 neurologically normal adults (75 AA, 25 CA). Results indicate that: (1) consistent with previous research, the two ethnic groups differed significantly on their cognitive test performance; (2) the two ethnic groups demonstrated small, but significant, differences in their early environmental histories; (3) retrospective accounts of early environmental experiences were significantly related to absolute performance on cognitive tests in both groups; (4) the qualitative measures of early environmental experiences accounted for some variance in cognitive test scores, above and beyond that attributable to age, gender, and years of education completed; but (5) covarying age-, education-, and gender-corrected cognitive scores for early environmental influences did not substantially affect the ethnic group performance disparity. It

was concluded that the early environmental influences retrospectively-assessed in this study are related to adult cognition, but that the relationship is less strong than that between cognition and years of education. Further, the relationship between these environmental variables and test performance is not unique to AAs, and does not appear to be clinically useful for interpreting AA neuropsychological test results. Finally, the results demonstrate the remaining need for ethnicity specific neuropsychological normative data, and for further research to better understand environmental influences on AA neuropsychological test performances.

SPSS Demystified Ronald D. Yockey, 2023-03-10 Without question, statistics is one of the most challenging courses for students in the social and behavioral sciences. Enrolling in their first statistics course, students are often apprehensive or extremely anxious toward the subject matter. And while IBM SPSS® is one of the more easy-to-use statistical software programs available, for anxious students who realize they not only have to learn statistics but also new software, the task can seem insurmountable. Yockey has written SPSS® Demystified: A Simple Guide and Reference, now in its fourth edition. Through a comprehensive, step-by-step approach, this text is consistently and specifically designed to both alleviate anxiety toward the subject matter and build a successful experience analyzing data in SPSS®. *Mind Wide Open* Steven Johnson, 2004-02-27 BRILLIANTLY EXPLORING TODAY'S CUTTING-EDGE BRAIN RESEARCH, MIND WIDE OPEN IS AN UNPRECEDENTED JOURNEY INTO THE ESSENCE OF HUMAN PERSONALITY, ALLOWING READERS TO UNDERSTAND THEMSELVES AND THE PEOPLE IN THEIR LIVES AS NEVER BEFORE. Using a mix of experiential reportage, personal storytelling, and fresh scientific discovery, Steven Johnson describes how the brain works -- its chemicals, structures, and subroutines -- and how these systems connect to the day-to-day realities of individual lives. For a hundred years, he says, many of us have assumed that the most powerful route to self-knowledge took the form of lying on a couch, talking about our childhoods. The possibility entertained in this book is that you can follow another path, in which learning about the brain's mechanics can widen one's self-awareness as powerfully as any therapy or meditation or drug. In *Mind Wide Open*, Johnson embarks on this path as his own test subject, participating in a battery of attention tests, learning to control video games by altering his brain waves, scanning his own brain with a \$2 million fMRI machine, all in search of a modern answer to the oldest of questions: who am I? Along the way, Johnson explores how we read other people, how the brain processes frightening events (and how we might rid ourselves of the scars those memories leave),

what the neurochemistry is behind love and sex, what it means that our brains are teeming with powerful chemicals closely related to recreational drugs, why music moves us to tears, and where our breakthrough ideas come from. Johnson's clear, engaging explanation of the physical functions of the brain reveals not only the broad strokes of our aptitudes and fears, our skills and weaknesses and desires, but also the momentary brain phenomena that a whole human life comprises. Why, when hearing a tale of woe, do we sometimes smile inappropriately, even if we don't want to? Why are some of us so bad at remembering phone numbers but brilliant at recognizing faces? Why does depression make us feel stupid? To read *Mind Wide Open* is to rethink family histories, individual fates, and the very nature of the self, and to see that brain science is now personally transformative - a valuable tool for better relationships and better living.
