Translation in Transition Isabel

Lacruz, 2023-07-26 Extraordinary advances in machine translation over the last three quarters of a century have profoundly affected many aspects of the translation profession. The widespread integration of adaptive “artificially intelligent” technologies has radically changed the way many translators think and work. In turn, groundbreaking empirical research has yielded new perspectives on the cognitive basis of the human translation process. Translation is in the throes

of radical transition on both professional and academic levels. The game-changing introduction of neural machine translation engines almost a decade ago accelerated these transitions. This volume takes stock of the depth and breadth of resulting developments, highlighting the emerging rivalry of human and machine intelligence. The gathering and analysis of big data is a common thread that has given access to new insights in widely divergent areas, from literary translation to movie subtitling to consecutive interpreting to development of flexible and powerful new cognitive models of translation.

Localizing Apps Johann Roturier, 2015-05-08 The software industry has undergone rapid development since the beginning of the twenty-first century. These changes have had a profound impact on translators who, due to the evolving nature of digital content, are under increasing pressure to adapt their ways of working. *Localizing Apps* looks at these challenges by focusing on the localization of software applications, or apps. In each of the five core chapters, Johann Roturier examines: The role of translation and other linguistic activities in adapting software to the needs of different cultures (localization); The procedures required to prepare source content before it gets localized (internationalization); The measures taken by software companies to guarantee the quality and success of a localized app. With practical tasks, suggestions for further reading and concise chapter summaries, *Localizing Apps* takes a comprehensive look at the transformation processes and tools used by the

software industry today. This text is essential reading for students, researchers and translators working in the area of translation and creative digital media.

Ghost Work Mary L. Gray, Siddharth Suri, 2019 A startling exposé of the invisible human workforce that powers the web--and how to bring it out of the shadows. Hidden beneath the surface of the internet, a new, stark reality is looming--one that cuts to the very heart of our endless debates about the impact of AI. Anthropologist Mary L. Gray and computer scientist Siddharth Suri unveil how the services we use from companies like Amazon, Google, Microsoft, and Uber can only function smoothly thanks to the judgment and experience of a vast human labor force that is kept deliberately concealed. The people who do 'ghost work' make the internet seem smart. They perform high-tech, on-demand piecework: flagging X-rated content, proofreading, transcribing audio, confirming identities, captioning video, and much more. The shameful truth is that no labor laws protect them or even acknowledge their existence. They often earn less than legal minimums for traditional work, they have no health benefits, and they can be fired at any time for any reason, or for no reason at all. An estimated 8 percent of Americans have worked in this 'ghost economy,' and that number is growing every day. In this unprecedented investigation, Gray and Suri make the case that robots will never completely eliminate 'ghost work' and the unchecked quest for artificial intelligence could spark catastrophic work conditions if not stopped in its tracks.

Ultimately, they show how this essential type of work can create opportunity--rather than misery--for those who do it.--Dust jacket.

Software Engineering Methods in Intelligent Algorithms Radek Silhavy,2019-05-07 This book presents software engineering methods in the context of the intelligent systems. It discusses real-world problems and exploratory research describing novel approaches and applications of software engineering, software design and algorithms. The book constitutes the refereed proceedings of the Software Engineering Methods in Intelligent Algorithms Section of the 8th Computer Science On-line Conference 2019 (CSOC 2019), held on-line in April 2019.

Using Film and Media in the Language Classroom Carmen Herrero,Isabelle Vanderschelden,2019-07-11 This book demonstrates the positive impact of using film and audiovisual material in the language classroom. The chapters are evidence-based and address different levels and contexts of learning around the world. They demonstrate the benefits of using moving images and films to develop intercultural awareness and promote multilingualism, and suggest Audiovisual Translation (AVT) activities and projects to enhance language learning. The book will be a valuable continuing professional development resource for language teachers and those involved in curriculum development, as well as bringing the latest research, theory and pedagogical techniques to teacher training courses.

Captioned Media in Foreign Language Learning and Teaching Robert Vanderplank,2016-08-09 This book

brings together current thinking on informal language learning and the findings of over 30 years of research on captions (same language subtitles for the deaf and hard-of-hearing) to present a new model of language learning from captioned viewing and a future roadmap for research and practice in this field. Language learners may have normal hearing but they are 'hard-of-listening' and find it difficult to follow the rapid or unclear speech in many films and TV programmes. Vanderplank considers whether watching with captions not only enables learners to understand and enjoy foreign language television and films but also helps them to improve their foreign language skills. *Captioned Media in Foreign Language Learning and Teaching* will be of interest to students and researchers involved in second language acquisition teaching and research, as well as practising language teachers and teacher trainers.

The Routledge Companion to Media Studies and Digital Humanities Jentery Sayers, 2018-05-01 Although media studies and digital humanities are established fields, their overlaps have not been examined in depth. This comprehensive collection fills that gap, giving readers a critical guide to understanding the array of methodologies and projects operating at the intersections of media, culture, and practice. Topics include: access, praxis, social justice, design, interaction, interfaces, mediation, materiality, remediation, data, memory, making, programming, and hacking.

Non-Professional Subtitling Yvonne Lee, David Orrego-Carmona, 2017-08-21 From fansubbing, fan-

generated translation, to user-generated translation, from amateur translation to social translation, non-professional subtitling has come a long way since its humble beginning in the 1980s. The prevailing technological affordance enables and mobilises the digital generation to turn subtitling into a method of self-expression and mediation, and their activities have made translation a more social and visible activity than ever before. This volume provides a comprehensive review of the current state of play of this user-generated subtitling phenomenon. It includes projects and research focusing on various aspects of non-professional subtitling, including the communities at work, the agents at play, the production conditions and the products. The perspectives in the book explore the role played by the agents involved in the emerging subtitling networks worldwide, and their impact on the communities is also discussed, based on empirical data generated from observations on active fansubbing communities. The collection demonstrates, from various viewpoints, the ways in which non-professional subtitling connects languages, cultures and communities in a global setting.

Case Studies in Innovative Clinical Trials

Kristine Broglio, Binbing Yu, 2023-11-27 Drug

development is a strictly regulated area. As such, marketing approval of a new drug depends heavily, if not exclusively, on evidence generated from clinical trials. Drug development has seen tremendous innovation in science and technology that has revolutionized the treatment of some diseases. And yet, the statistical design and practical conduct of the clinical trials used to test new therapeutics for safety and efficacy have changed very little over the decades. Our approach to clinical trials is steeped in convention and tradition. The large, fixed, randomized controlled trial methods that have been the gold standard are well understood and expected by many trial stakeholders. However, this approach is not well suited to all aspects of modern drug development and the current competitive landscape. We now see new therapies that target a small fraction of the patient population, rare diseases with high unmet medical needs, and pediatric populations that must wait for years for new drug approvals from the time that therapies are approved in adults. Large randomized clinical trials are at best inefficient and at worst completely infeasible in many modern clinical settings. Advances in technology and data infrastructure call for innovations in clinical trial design. Despite advances in statistical methods, the availability of information, and computing power, the actual experience with innovative design in clinical trials across industry and academia is limited. This book will be an important showcase of the potential for these innovative designs in modern drug development and will be an important resource to

guide those who wish to undertake them for themselves. This book is ideal for professionals in the pharmaceutical industry and regulatory agencies, but it will also be useful to academic researchers, faculty members, and graduate students in statistics, biostatistics, public health, and epidemiology due to its focus on innovation. Key Features: Is written by pharmaceutical industry experts, academic researchers, and regulatory reviewers; this is the first book providing a comprehensive set of case studies related to statistical methodology, implementation, regulatory considerations, and communication of complex innovative trial design. Has a broad appeal to a multitude of readers across academia, industry, and regulatory agencies. Each contribution is a practical case study that can speak to the benefits of an innovative approach but also balance that with the real-life challenges encountered. A complete understanding of what is actually being done in modern clinical trials will broaden the reader's capabilities and provide examples to first mimic and then customize and expand upon when exploring these ideas on their own.

An End to the War on Terrorism Phil Gurski, 2018-08-08 This book will discuss what we have collectively done well, what we have done poorly, what we have yet to try and how we get to the point where terrorism does not dominate public discourse and cause disproportionate fear around the world.

Embedded Image Processing on the TMS320C6000TM DSP Shehrzad Qureshi, 2006-07-20 This is an

application-oriented book includes debugged & efficient C implementations of real-world algorithms, in a variety of languages/environments, offering unique coverage of embedded image processing. covers TI technologies and applies them to an important market (important: features the C6416 DSK) Also covers the EVM should not be lost, especially the C6416 DSK, a much more recent DSP. Algorithms treated here are frequently missing from other image processing texts, in particular Chapter 6 (Wavelets), moreover, efficient fixed-point implementations of wavelet-based algorithms also treated. Provide numerous Visual Studio .NET 2003 C/C++ code, that show how to use MFC, GDI+, and the Intel IPP library to prototype image processing applications

The Threat From Within Phil Gurski, 2015-10-22
The Threat From Within examines what drives Al Qaeda-inspired radicalization to violence, how to detect it, and how to confront it. The chapters discuss behaviors and ideologies that are observable and tangible in radicalized individuals or those on the path to violent radicalization. These behaviors are drawn from a variety of cases, such as planning acts of terrorism, traveling to join terrorist groups, or participating in violent jihadi conflict outside the country. The main case study is Canada, and each chapter features many examples that range from Ted Kaczynski (the "Unabomber") and Anders Brevik in Norway to Tamerlan Tsarnaev and Damian Clairmont, a Canadian citizen who died fighting in Syria. The text begins by introducing general concepts, such as

terrorism, extremism, and radicalization, before presenting contributing factors to those embracing political violence. A comprehensive list of behavioral indicators that someone is becoming a violent extremist is provided, followed by a look at what is being done to confront this threat as well as what could be done.

Emerging Trends and Applications in Cognitive

Computing Mallick, Pradeep Kumar, Borah, Samarjeet, 2018-12-28 Though an individual can process a limitless amount of information, the human brain can only comprehend a small amount of data at a time. Using technology can improve the process and comprehension of information, but the technology must learn to behave more like a human brain to employ concepts like memory, learning, visualization ability, and decision making. Emerging Trends and Applications in Cognitive Computing is a fundamental scholarly source that provides empirical studies and theoretical analysis to show how learning methods can solve important application problems throughout various industries and explain how machine learning research is conducted. Including innovative research on topics such as deep neural networks, cyber-physical systems, and pattern recognition, this collection of research will benefit individuals such as IT professionals, academicians, students, researchers, and managers.
