## **The Use of Formal Specification of Software H.K. Berg,W.K.**

Giloi,2012-12-06 The notion that program design is an engineering task alleviating the software crisis has been with us for about a decade. With the recognized advantages of obeying to certain software design disciplines, we are approaching the era of enforced system development standards which will ensure that end products will meet rigorous design requirements. On the one hand, advances in system architecture further the application of system development standards to software and firmware design and production. On the other hand, the growth in complexity of future system architectures, in particular distributed systems with their special problems of cooperation and parallelism, necessitate the use of rigorous specification and design techniques. In addition to hampering the design process, the lack of engineering techniques hinders research. In many cases, trial designs that are presented in abstract and informal terms do not force the designer to face the full problem spectrum, and therefore may not sufficiently provide insight into the design process. To prepare for the forthcoming discipline and to provide a snapshot view of recent advances in software and firmware engineering, we organized in June of 1979 a

seminar entitled: The Use of Formal Specification of Software and Firmware. The seminar took place at the Heinrich-Hertz-Institute, Berlin, and attracted over 60 participants, most of them from the industry.

**Knowledge-Based Intelligent Information and Engineering Systems** Rajiv Khosla,2005-08-25 Dear delegates,friendsand

members of the growing KES professional community, welcome to the proceedings of the 9th International Conference on Knowledge-Based and

Intelligent Information and Engineering Systems hosted by La

Trobe University in Melbourne Australia. The KES conference series has been established for almost a decade, and it continues each year to attract participants from all geographical areas of the world, including Europe, the Americas, Australasia and the Pacific Rim.

The KES conferences cover a wide range of intelligent systems topics. The broad focus of the conference series is the theory and applications of intelligent systems. From a pure research field, intelligent systems have advanced to the point where their abilities have been incorporated into many business and engineering application areas. KES 2005 provided a valuable mechanism for delegates to obtain an extensive view of the latest research into a range of intelligent-systems algorithms, tools and techniques. The conference also gave delegates the chance to come into contact with those applying intelligent systems in diverse commercial areas. The combination of theory and practice represented a unique opportunity to gain an appreciation of the full spectrum of leading-edge intelligent-systems activity. The papers for KES 2005

were either submitted to invited sessions, chaired and organized by respected experts in their fields, or to a general session, managed by an extensive International Program Committee, or to the Intelligent Information Hiding and Multimedia Signal Processing (IIHMSP) Workshop, managed by an International Workshop Technical Committee.

*Geotechnical Risk and Safety* Yusuke Honjo, Makoto Suzuki, Takashi Hara, Feng Zhang, 2009-06-01 Communication of risks within a transparent and accountable framework is essential in view of increasing mobility and the complexity of the modern society and the field of geotechnical engineering does not form an exception. As a result, modern risk assessment and management are required in all aspects of geotechnical issues, such as planning, design, construction of geotechnical structures, mitigation of geo-hazards, management of large construction projects, maintenance of structures and life-cycle cost evaluation. This volume discusses: 1. Evaluation and control of uncertainties through investigation, design and construction of geotechnical structures; 2. Performance-based specifications, reliability based design and limit state design of geotechnical structures, and design code developments; 3. Risk assessment and management of geo-

hazards, such as landslides, earthquakes, debris flow, etc.; 4. Risk management issues concerning large geotechnical construction projects; 5. Repair and maintenance strategies of geotechnical structures. Intended for researchers and practitioners in geotechnical, geological, infrastructure and construction engineering.

**Fundamentals of Software Engineering** Hossein Hojjat,Mieke Massink,2019-09-21 This book constitutes the thoroughly refereed post-conference proceedings of the 8th International Conference on Fundamentals of Software Engineering, FSEN 2019, held in

Tehran, Iran, in May 2019. The 14 full papers and 3 short papers presented in this volume were carefully reviewed and selected from 47 submissions. The topics of interest in FSEN span over all aspects of formal methods, especially those related to advancing the application of formal methods in the software industry and promoting their integration with practical engineering techniques. The papers are organized in topical sections on agent based systems, theorem proving, learning, verification, distributed algorithms, and program analysis.
