Urban Retrofitting for Sustainability Tim Dixon,Malcolm Eames,Miriam Hunt,Simon Lannon,2014-01-21 With a foreword from Paul King, Chief Executive, UK Green Building Council and Chairman, Zero Carbon Hub As concerns over climate change and resource constraints grow, many cities across the world are trying to achieve a low carbon transition. Although new zero carbon buildings are an important part of the story, in existing cities the transformation of the current building stock and urban infrastructure must inevitably form the main focus for transitioning to a low carbon and sustainable future by 2050. Urban Retrofitting for Sustainability brings together interdisciplinary research contributions from leading international experts to focus on key issues such as systems innovation, financing tools, governance, energy, and water management. The chapters consider not only the knowledge and technical tools available, but looks forward to how they can be implemented in real cities by 2050.

Perspectives On Supersymmetry Gordon Kane,1998-07-03 Supersymmetry is at an exciting stage of development. It extends the Standard Model of particle physics into a more powerful theory that both explains more and allows more questions to be addressed. Most important, it opens a window for studying and testing fundamental theories at the Planck scale. Experimentally we are finally entering the intensity and energy regions where superpartners are likely to be detected, and then studied. There has been progress in understanding the remarkable physics implications of supersymmetry, including the derivation of the Higgs mechanism, the unification of the Standard Model forces, cosmological connections such as a candidate for the cold dark matter of the universe and the scalar fields that drive inflation and their potential, the relationship to Planck scale theories, and more. While there are a number of reviews and books where the mathematical structure and uses of supersymmetry can be learned, there are few where the particle physics is the main focus. This book fills that gap. It begins with an excellent pedagogical introduction to the physics and methods and formalism of supersymmetry, by S Martin, which is accessible to anyone with a basic knowledge of the Standard Model of particle physics. Next is an overview of open questions by K Dienes and C Kolda, followed by chapters on topics ranging from how to detect superpartners to connections with Planck scale theories, by leading experts. This invaluable book will allow any interested physicist to understand the coming experimental and theoretical progress in supersymmetry, and will also help students and workers to quickly learn new aspects of supersymmetry they want to pursue.

Grading the Nation's Report Card Committee on the Evaluation of National and State Assessments of Educational Progress,Board on Testing and Assessment,Division of Behavioral and Social Sciences and Education,National Research Council,1999-01-06 Since the late 1960s, the National Assessment of Educational Progress (NAEP)--the nation's report card--has been the only continuing measure of student achievement in key subject areas. Increasingly, educators and policymakers have expected NAEP to serve as a lever for education reform and many other purposes beyond its original role. Grading the Nation's Report Card examines ways NAEP can be strengthened to provide more informative portrayals of student achievement and the school and system factors that influence it. The committee offers specific recommendations and strategies for improving NAEP's effectiveness and utility, including: Linking achievement data to other education indicators. Streamlining data collection and other aspects of its design. Including students with disabilities and English-language learners. Revamping the process by which achievement levels are set. The book explores how to improve NAEP framework documents--which identify knowledge and skills to be assessed--with a clearer eye toward the inferences that will be drawn from the results. What should the nation expect from NAEP? What should NAEP do to meet these expectations? This book provides a blueprint for a new paradigm, important to education policymakers, professors, and students, as well as school administrators and teachers, and education advocates.

Logical Methods John N. Crossley,Jeffrey B. Remmel,Richard Shore,Moss E. Sweedler,1994-01-26 The twenty-six papers in this volume reflect the wide and still expanding range of Anil Nerode's work. A conference on Logical Methods was held in honor of Nerode's sixtieth birthday (4 June 1992) at the Mathematical Sciences Institute, Cornell University, 1-3 June 1992. Some of the conference papers are here, but others are from students, co-workers and other colleagues. The intention of the conference was to look forward, and to see the directions currently being pursued, in the development of work by, or with, Nerode. Here is a brief summary of the contents of this book. We give a retrospective view of Nerode's work. A number of specific areas are readily discerned: recursive equivalence types, recursive algebra and model theory, the theory of Turing degrees and r.e. sets, polynomial-time computability and computer science. Nerode began with automata theory and has also taken a keen interest in the history of mathematics. All these areas are represented. The one area missing is Nerode's applied mathematical work relating to the environment. Kozen's paper builds on Nerode's early work on automata. Recursive equivalence types are covered by Dekker and Barback, the latter using directly a fundamental metatheorem of Nerode. Recursive algebra is treated by Ge & Richards (group representations). Recursive model theory is the subject of papers by Hird, Moses, and Khoussainov & Dadajonov, while a combinatorial problem in recursive model theory is discussed in Cherlin & Martin's paper. Cenzer presents a paper on recursive dynamics.

The Patchwork Quilt Valerie Flourney,1985-03-29 Twenty years ago Valerie Flourney and Jerry Pinkney created a warmhearted intergenerational story that became an award-winning perennial. Since then children from all sorts of family situations and configurations continue to be drawn to its portrait of those bonds that create the fabric of family life.

Lynch); (11) The 'Mis-education of the Negro'--and You Too (Geneva Smitherman); and (12) What One Teacher Can Do (Harvey A. Daniels). (KEH)

Oasis Tony McCarroll,2011-08-01 In 1991, five wannabe Mancunian musicians came together to form Oasis. The band went from obscurity to become a global phenomenon in the space of a year, achieving worldwide recognition and selling over 70 million records. Pre Oasis, drummer Tony McCarroll joined The Rain, linking up with guitarist Paul 'Bonehead' Arthurs, bassist Paul McGuigan and singer Chris Hutton. Hutton was later replaced by Liam Gallagher who in turn brought brother Noel along. What started out as five young lads with a common dream of becoming rock stars eventually disintegrated into in-fighting, clashes of egos and financial disputes. In 1995, following the release of Definitely Maybe -- the fastest-selling debut album of all time -- things came to a head and Tony left the band. In this candid and hilarious book, Tony tells one of the most in-depth rock'n'roll stories of modern times: he reveals the truth about the early years before the band was even formed; he tells of the drug consumption and sexual activities and he talks of his much-publicised rift with Noel. Tony's recollections include stories involving David Beckham, Prince, Eric Cantona and John McEnroe. This is not the distorted truth that some may want you to believe -- this is the real story. Witty, revealing and fascinating, this book is a must-read for any worthwhile music fan.

Toward Defining Literacy Richard L. Venezky,Daniel A. Wagner,1990-01-01 This collection of four papers (each with a response) given at a 1987

symposium focuses on a renewed consideration of literacy in America and its implications for national, state, and local policy. The papers include Definitions of Literacy (Richard L. Venezky); Literacy for What Purpose? (Larry Mikulecky); Measuring Adult Literacy (Irwin S. Kirsch); and Policy Implications of Literacy Definitions (Jeanne S. Chall). A concluding section summarizes the basic issues raised in the papers and gives an interpretation of the positions presented on each. (RS)

Bilingual Education Christina Bratt Paulston,1980 In this study, I will attempt to outline some major theories of social and educational change and to delineate the identification and interpretation of variables of bilingual education within the framework of each particular theory. In so doing, I am drawing heavily on the work by R.G. Paulston in his Conflicting Theories of Social and Educational Change: A Typological Review (1976). - Introduction.

The Making of the British Landscape Nicholas Crane,2017-10-05 Nicholas Crane's new book brilliantly describes the evolution of Britain's countryside and cities. It is part journey, part history, and it concludes with awkward questions about the future of Britain's landscapes. Nick Crane's story begins with the melting tongues of glaciers and the emergence of a gigantic game-park tentatively being explored by a vanguard of Mesolithic adventurers who have taken the long, northward hike across the land bridge from the continent. The Iron Age develops into a pre-Roman 'Golden Era' and Crane looks at what the Romans did (and didn't) contribute to the British landscape. Major landscape 'events' (Black Death, enclosures, urbanisation, recreation, etc.) are fully described and explored, and he weaves in the role played by geology in shaping our cities, industry and recreation, the effect of climate (and the Gulf Stream), and of global economics (the Lancashire valleys were formed by overseas markets). The co-presenter of BBC's COAST also covers the extraordinary benefits bestowed by a 6,000-mile coastline. The 12,000-year story of the British landscape culminates in the twenty-first century, which is set to be one of the most extreme centuries of change since the Ice Age.
