**International Scientific Conference Energy Management of Municipal Transportation Facilities and Transport EMMFT 2017** Vera Murgul,Zdenka Popovic,2017-12-19 This book includes the proceedings of the 19th International Scientific Conference “Energy Management of Municipal Transportation Facilities and Transport EMMFT 2017”, which was held in Khabarovsk, Russia on 10–13 April 2017. The book presents the research findings of scientists working at universities in the Far Eastern, Siberian and Ural Federal Districts of Russia, and of Serbia, which are unique regions notable for sustainably operating complex transport infrastructures in severe climatic and geographic environments. It also offers practical insights into transportation operation under such conditions.The book discusses the experiences of colleagues from Slovenia, Ukraine and Latvia in the development of transport infrastructure and construction of transport facilities and features and includes the results of a wide range of studies, such as managing multimodal transportation, improving the efficiency of locomotives, electric locomotives, traction substations, electrical substations, relay protection and automation devices, and power-factor correction units. It addresses topics like renewable energy sources, problems

of the mathematical and simulation modelling of electromagnetic processes of electrical power objects and systems, aspects of cost reduction for fuel-and-power resources, theoretical aspects of energy management, development of transport infrastructure, modern organizational and technological solutions in construction, new approaches in the field of management, analysis and monitoring in transport sector. Comprising 142 high-quality articles covering a wide range of topics, these proceedings are of interest to anyone engaged in transport engineering, electric power systems, energy management, construction and operation of transport infrastructure buildings and facilities.

**Defects in High-k Gate Dielectric Stacks** Evgeni Gusev, 2006-01-27 The main goal of this book is to review at the nano and atomic scale the very complex scientific issues that pertain to the use of advanced high dielectric constant (high-k) materials in next generation semiconductor devices. One of the key obstacles to integrate this novel class of materials into Si nano-technology are the electronic defects in high-k dielectrics. It has been established that defects do exist in high-k dielectrics and they play an important role in device operation. The unique feature of this book is a special focus on the important issue of defects. The subject is covered from various angles, including silicon technology, processing aspects, materials properties, electrical defects, microstructural studies, and theory. The authors who have contributed to the book represents a diverse group of

leading scientists from academic, industrial and governmental labs worldwide who bring a broad array of backgrounds (basic and applied physics, chemistry, electrical engineering, surface science, and materials science). The contributions to this book are accessible to both expert scientists and engineers who need to keep up with leading edge research, and newcomers to the field who wish to learn more about the exciting basic and applied research issues relevant to next generation device technology.

Echoes of a Native Land Serge Schmemmann, 2011-03-23 Tracing the lives of his Russian forebears, Serge Schmemmann, Pulitzer Prize-winning foreign correspondent for the New York Times, tells a remarkable story that spans the past two hundred years of Russian history. First, he draws on a family archive rich in pictorial as well as documentary treasure to bring us into the prerevolutionary life of the village of Sergiyevskoye (now called Koltsovo), where the spacious estate of his mother's family was the seat of a manor house as vast and imposing as a grand hotel. In this village, on this estate--ringed with orchards, traversed by endless paths through linden groves, overseen by a towering brick church, and bordered by a sparkling-clear river--we live through the cycle of a year: the springtime mud, summertime card parties, winter nights of music and good talk in a haven safe from the bitter cold and ever-present snow. Family recollections of life a century ago summon up an aura of devotion to tsar and church. The unjust, benevolent, complicated, and ultimately doomed relationship between master

and peasants--leading to growing unrest, then to civil war--is subtly captured. Diary entries record the social breakdown step by step: grievances going unresolved, the government foundering, the status quo of rural life overcome by revolutionary fervor. Soon we see the estate brutally collectivized, the church torn apart brick by brick, the manor house burned to the ground. Some of the family are killed in the fighting; others escape into exile; one writes to his kin for the last time from the Gulag. The Soviet era is experienced as a time of privation, suffering, and lost illusions. The Nazi occupation inspires valorous resistance, but at great cost. Eventually all that remains of Sergiyevskoye is an impoverished collective. Without idealizing the tsarist past or wholly damning the regime that followed, Schmemmann searches for a lost heritage as he shows how Communism thwarted aspiration and initiative. Above all, however, his book provides for us a deeply felt evocation of the long-ago life of a corner of Russia that is even now movingly beautiful despite the ravages of history and time.

**Parallel Computational Technologies** Leonid Sokolinsky, Mikhail Zymbler, 2022-07-18 This book constitutes the refereed proceedings of the 16th International Conference on Parallel Computational Technologies, PCT 2022, held in Dubna, Russia, during March 29–31, 2022. The 22 full papers included in this book were carefully reviewed and selected from 60 submissions. They were organized in topical sections as follows: high performance

architectures, tools and technologies; parallel numerical algorithms; supercomputer simulation.

**Modern Approaches to Non-Perturbative QCD and other Confining Gauge Theories** Dmitry Antonov, 2022 This book contains seven reviews and four research articles on the various modern approaches to the problem of quark confinement in quantum chromodynamics (QCD). These approaches include microscopic models of the Yang-Mills vacuum, which are based on the condensation of magnetic monopoles and center vortices, as well as the models of the confining quark-antiquark string. Possible applications of these models to the analysis of the novel superinsulating state, which emerges in such condensed-matter systems as Josephson junction arrays, are further discussed in one of the reviews. Two reviews from this collection discuss the approaches towards the analytic construction of effective confining theories, at the classical level and within the center-vortex model of the Yang-Mills vacuum. Other aspects of non-perturbative physics addressed by this collection include a possible connection between the localization of low-lying Dirac eigenmodes with the deconfinement and the chiral QCD phase transitions, as well as the role of topology in baryon-rich matter. Last but not least, a novel model of dark matter, based on ultralight axion particles, whose masses are arising due to distinct  $SU(2)$  Yang-Mills scales and the Planck mass, is suggested and developed in one of the contributed articles.

*Contemporary High Performance Computing* Jeffrey S. Vetter, 2019-04-30

Contemporary High Performance Computing: From Petascale toward Exascale, Volume 3 focuses on the ecosystems surrounding the world's leading centers for high performance computing (HPC). It covers many of the important factors involved in each ecosystem: computer architectures, software, applications, facilities, and sponsors. This third volume will be a continuation of the two previous volumes, and will include other HPC ecosystems using the same chapter outline: description of a flagship system, major application workloads, facilities, and sponsors. Features: Describes many prominent, international systems in HPC from 2015 through 2017 including each system's hardware and software architecture Covers facilities for each system including power and cooling Presents application workloads for each site Discusses historic and projected trends in technology and applications Includes contributions from leading experts Designed for researchers and students in high performance computing, computational science, and related areas, this book provides a valuable guide to the state-of-the art research, trends, and resources in the world of HPC.

**Parallel Processing and Applied Mathematics** Roman Wyrzykowski, Ewa Deelman, Jack Dongarra, Konrad Karczewski, Jacek Kitowski, Kazimierz Wiatr, 2016-04-05 This two-volume-set (LNCS 9573 and 9574) constitutes the

refereed proceedings of the 11th International Conference of Parallel Processing and Applied Mathematics, PPAM 2015, held in Krakow, Poland, in September 2015. The 111 revised full papers presented in both volumes were carefully reviewed and selected from 196 submissions. The focus of PPAM 2015 was on models, algorithms, and software tools which facilitate efficient and convenient utilization of modern parallel and distributed computing architectures, as well as on large-scale applications, including big data problems.

**Reconstructing Lenin** Tamás Krausz, 2015-02-27 Vladimir Ilyich Lenin is among the most enigmatic and influential figures of the twentieth century. While his life and work are crucial to any understanding of modern history and the socialist movement, generations of writers on the left and the right have seen fit to embalm him endlessly with superficial analysis or dreary dogma. Now, after the fall of the Soviet Union and “actually-existing” socialism, it is possible to consider Lenin afresh, with sober senses trained on his historical context and how it shaped his theoretical and political contributions. *Reconstructing Lenin*, four decades in the making and now available in English for the first time, is an attempt to do just that. Tamás Krausz, an esteemed Hungarian scholar writing in the tradition of György Lukács, Ferenc Tokei, and István Mészáros, makes a major contribution to a growing field of contemporary Lenin studies. This rich and penetrating account reveals Lenin busy at the work of revolution, his thought shaped by

immediate political events but never straying far from a coherent theoretical perspective. Krausz balances detailed descriptions of Lenin's time and place with lucid explications of his intellectual development, covering a range of topics like war and revolution, dictatorship and democracy, socialism and utopianism. *Reconstructing Lenin* will change the way you look at a man and a movement; it will also introduce the English-speaking world to a profound radical scholar.

**Nonperturbative Methods in Gauge Theories** Dimitri Antonov, 2013

**Aircraft Valuation in Volatile Market Conditions** Bijan Vasigh, Farshid Azadian, 2022-03-15 This book provides indispensable knowledge for practitioners in aircraft financing. It presents an innovative framework that treats valuation analysis as a systematic effort in problem-solving directed at rational financial decision-making. It incorporates much of the modern approach to financial investment decision-making. It proposes essential tools of flexibility, adaptability, and commonality of aircraft financial analyses that apply to an almost infinite variety of valuation problem situations. Once these connections have been introduced, the reader will be equipped with an understanding of the underlying concepts of aircraft valuation processes and techniques and the subsequent financing alternatives available to fund aircraft assets. This is an essential book for airline professionals,

aircraft leasing companies, consultants, bankers, government officials, and students of aircraft finance. It is an approachable resource for those without a formal background in finance.

**Shadow State** Luke Harding, 2020-06-30 A thrilling account of how Russia is waging a hidden war against America and the West, using espionage, corruption, fake news, and KGB-style murder March 2018. Two Russian assassins arrive in a provincial English city to kill a former officer from Russia's GRU intelligence agency. His crime? Passing secrets to British spies. The poison? A lethal nerve agent, novichok. The attempted execution was a reminder – as if one were needed - of Russia's contempt for international norms. The Soviet Union and its doctrine are long gone, but the playbook used by the Kremlin's spies during that long confrontation with the West is back. And the underlying goal remains the same: to undermine democracy and exploit divisions within American and European society and politics. Moscow's support for Donald Trump in the 2016 presidential election has grown into the biggest political scandal of modern times. Its American players are well-known. In *Shadow State*, award-winning journalist and bestselling author Luke Harding reveals the Russians behind the story: the spies, hackers and internet trolls. Harding charts how the Kremlin has updated Communist-era methods of influence and propaganda for the age of Facebook and Twitter, and considers the compelling question of our age: what exactly does Vladimir Putin have on President Trump? Similar to those of the Cold War, Putin's ambitions are

truly global. His emissaries include oligarchs, bankers, lawyers, mercenaries, and agents of influence. They roam from Salisbury to Helsinki, Ukraine to Central Africa, London to Washington, D.C. *Shadow State* is the singular account of how the Kremlin seeks to reshape the world, to divide the US from its European friends, and to remake America in its own dark and kleptocratic image. This is an essential read for anyone who wants to understand how our politics came to be so chaotic and divided. Nothing less than the future of Western democracy is at stake.

*The Moralist International* Kristina Stoeckl, Dmitry Uzlaner, 2022-12-20 The Moralist International analyzes the role of the Russian Orthodox Church and the Russian state in the global culture wars over gender and reproductive rights and religious freedom. It shows how the Russian Orthodox Church in the past thirty years first acquired knowledge about the dynamics, issues, and strategies of Right- Wing Christian groups; how the Moscow Patriarchate has shaped its traditionalist agenda accordingly; and how the close alliance between church and state has turned Russia into a norm entrepreneur for international moral conservatism. Including detailed case studies of the World Congress of Families, anti-abortion activism, and the global homeschooling movement, the book identifies the key factors, causes, and actors of this process. Kristina Stoeckl and Dmitry Uzlaner then develop the concept of conservative aggiornamento to describe Russian traditionalism as the result of conservative religious modernization and the globalization of

Christian social conservatism. The Moralist International continues a line of research on the globalization of the culture wars that challenges the widespread perception that it is only progressive actors who use the international human rights regime to achieve their goals by demonstrating that conservative actors do the same. The book offers a new, original perspective that firmly embeds the conservative turn of post-Soviet Russia in the transnational dynamics of the global culture wars. The Moralist International is available from the publisher on an open-access basis.

**Weapons and Warfare [2 volumes]** Spencer C. Tucker,2020-03-26 This work covers major weapons throughout human history, beginning with clubs and maces; through crossbows, swords, and gunpowder; up to the hypersonic railgun, lasers, and robotic weapons under development today. Weapons and Warfare is designed to provide students with a comprehensive and highly informative overview of weapons and their impact on the course of human history. In addition to providing basic factual information, this encyclopedia will delve into the greater historical context and significance of each weapon. The chronological organization by time period will enable readers to fully understand the evolution of weapons throughout history. The work begins with a foreword by a top scholar and a detailed introductory essay by the editor that provides an illuminating historical overview of weapons. It then offers entries on more than 650 individual weapons systems.

Each entry has sources for further reading. The weapons are presented alphabetically within six time periods, ranging from the prehistoric and ancient periods to the contemporary period. Each period has its own introduction that treats the major trends occurring in that era. In addition, 50 sidebars offer fascinating facts on various weapons. Numerous illustrations throughout the text are also included.

Supercomputing Vladimir Voevodin, Sergey Sobolev, 2020-12-05 This book constitutes the refereed post-conference proceedings of the 6th Russian Supercomputing Days, RuSCDays 2020, held in Moscow, Russia, in September 2020.\* The 51 revised full and 4 revised short papers presented were carefully reviewed and selected from 106 submissions. The papers are organized in the following topical sections: parallel algorithms; supercomputer simulation; HPC, BigData, AI: architectures, technologies, tools; and distributed and cloud computing. \* The conference was held virtually due to the COVID-19 pandemic.

**Quagga and Zebra Mussels** Thomas F. Nalepa, Don W. Schloesser, 2013-10-25 The introduction and rapid spread of two Eurasian mussel species, *Dreissena polymorpha* (zebra mussel) and *Dreissena rostriformis bugensis* (quagga mussel), in waters of North America has caused great concern among industrial and recreational water users. These invasive species can create substantial problems for raw water users such as water treatment facilities and power plants, and they can have other negative impacts by altering aquatic

environments. In the 20 years since the first edition of this book was published, zebra mussels have continued to spread, and quagga mussels have become the greater threat in the Great Lakes, in deep regions of large lakes, and in the southwestern United States. Quagga mussels have also expanded greatly in eastern and western Europe since the first book edition was published. *Quagga and Zebra Mussels: Biology, Impacts, and Control*, Second Edition provides a broad view of the zebra/quagga mussel issue, offering a historic perspective and up-to-date information on mussel research. Comprising 48 chapters, this second edition includes reviews of mussel morphology, physiology, and behavior. It details mussel distribution and spread in Europe and across North America, and examines policy and regulatory responses, management strategies, and mitigation efforts. In addition, this book provides extensive coverage of the impact of invasive mussel species on freshwater ecosystems, including effects on water clarity, phytoplankton, water quality, food web changes, and consequences to other aquatic fauna. It also reviews and offers new insights on how zebra and quagga mussels respond and adapt to varying environmental conditions. This new edition includes seven video clips that complement chapter text and, through visual documentation, provide a greater understanding of mussel behavior and distribution.
