Studies on the Biological Treatment of Wastewater from Starch Industry for Pollution Control Shubhaneel Neogi,2020-07-07 Doctoral Thesis / Dissertation from the year 2020 in the subject Biology - Miscellaneous, grade: A, National Institute Of Technology Durgapur (National Institute of Technology Durgapur), course: PhD in Biotechnology, language: English, abstract: The present research work was undertaken for the biological treatment of starch industry wastewater for pollution control. Starch industry effluent generates a large volume of wastewater with strong acidity and enormous carbon and nitrogen pollutants. In the present study, the development of low pH methanogens and anammox microorganisms were given special attention. Low pH methanogenic reactor and anammox reactor were fabricated for the biological treatment of corn starch industry effluent. In the first part of the work, low pH tolerant methanogens were isolated from peat bog of leaf debris. It showed the presence of Gram-negative, non-spore forming, and cocci with creamish black colour colonies. The leaf debris inoculum was taken for optimum COD removal under anaerobic conditions. Identification and isolation of anammox group of bacteria were performed using enrichment and 16S rRNA amplicon analysis. The objective of the study was to remove ammonia under the anaerobic condition from starch industry effluent. The media optimization using carbon and nitrogen source was undertaken which is required for anammox enrichment. The physical growth factors like temperature and pH were optimized. The optimized temperature and pH were 39 °C and 7.2 respectively. Some restrictive growth factors like salinity and antibiotic concentration were also studied which were found insignificant in our study. Finally, the overall process was scaled up in the laboratory reactor. The reactor study revealed that in the anaerobic reactor 1.16 kg COD/kg VSS/d was removed producing 42-46% methane as output gas. The anammox reactor was able to reduce 82% nitrogen load from starch industry effluent at the rate of 1.5 kg/m³/d after 568 days of initiation.

Planetary Biodiversity Inventory (2008-2017) Janine N. Caira,Kristen Jensen,2017-07-10 This document is organized into 22 peer-reviewed chapters. Each of the chapters focuses on an individual cestode group, begins with the status of knowledge of the group prior to the inception of the PBI project, and ends with an assessment of the current understanding of the group. In each case, diversity, classification, morphology, phylogenetic relationships, host associations, and geographic distribution are addressed. In all but one case, each chapter includes a list of valid taxa. Synonyms have not generally been listed; this was determined to be beyond the scope of the project given the immensity of such lists for some groups. With over 3,000 valid species, the generation of a list of species for the Cyclophyllidea was also determined to be beyond the scope of this project. However, a list of valid higher taxa is provided. Each of the 19 cestode orders is addressed alphabetically in separate chapters with two exceptions. The Mesocetoididae are treated as a family in the Cyclophyllidea. Although evidence supporting recognition of the former as an independent order is mounting, the case remains to be formally made based on more detailed investigations of this enigmatic group of mammal parasites. The Onchoproteocephalidea are the second exception. So as to emphasize the dual nature of the host associations and scolex morphology of its members, the freshwater fish-parasitizing taxa (formerly assigned to the order Proteocephalidea) are treated in a chapter as the Onchoproteocephalidea I separately from the taxa that parasitize elasmobranchs, which are treated as the Onchoproteocephalidea II. Use of quotation marks around taxon names (e.g., the order Tetracyllidea) is to remind readers of the definitively non-monophyletic nature of these groups.

How to Build M and E Systems to Support Better Government Keith Robin Mackay,2007 A growing number of governments are working to improve their performance by creating systems to measure and help them understand their performance. These systems for monitoring and evaluation (M & E) are used to measure the quantity, quality, and targeting of the goods and services--the outputs--that the state provides and to measure the outcomes and impacts resulting from these outputs. These systems are also a vehicle to facilitate understanding of the causes of good and poor performance.

Botanical Leads for Drug Discovery Bikarma Singh,2020-10-05 Active botanical ingredients are a prime requirement for herbal formulations and discovering a drug is all about integration of science disciplines. In recent decades there has been a growing interest in treating wounds and diseases using traditional remedies based on local herbs, combined with chemical advances. Although this has led to the development of new bioactive ingredients from plants, there has been little success in terms of clinical trials and post-marketing studies to comply with FDA guidelines. Plants have been used as a source of medicine throughout history and continue to serve as the basis for many pharmaceuticals used today. However, despite the modern pharmaceutical industry being founded on botanical medicine, synthetic approaches to drug discovery have now become standard. Science-driven translational discovery and botanical development has created a new reality, leading to enormous changes in strategies, technologies and the disciplines involved, which have been embraced by the pharmaceutical and biotech industries. This book gathers scientific expertise and traditional knowledge to promote the discovery and development of new formulations and drugs based on active ingredients and to provide guidance on taking these to clinical trials. It discusses major topics, such as how the phytochemical composition of many plants has changed over time due to factors like cultivation, which can have both positive and negative effects on the levels of bioactive compounds. It also explores the importance of plants as a valuable source of therapeutic compounds as a result of their vast biosynthetic capacity, and classifies them according to their intended use, safety and regulatory status. Further, the book offers insights into the regulatory aspects of botanical products, which is an important issue when considering standardization and quality assessment, and also examines the commercial aspects of plant-derived medications and their proven role in the treatment of chronic diseases such as heart disease, high blood pressure, pain, asthma, and other associated conditions. Given its scope, this book is a valuable tool for botanists, natural product chemists, pharmacologists and microbiologists involved in the study of phytochemicals for drug discovery.
