Vaccine Science and Immunization Guideline Pamela G. Rockwell, DO,2017-11-03 This book is a comprehensive resource on vaccines and immunizations for primary care physicians, advanced practice providers, and trainees. We are now seeing a rise in measles and the potential for rises in other previously rare infectious diseases, significantly due to public and physician misconceptions and misinformation about vaccines. The text addresses this issue by consolidating historical and current advances in vaccine science from how vaccines are developed to CDC recommendations on how and when to administer them. Expert authors also address barriers to improving vaccination rates in the U.S. and offer evidence-based recommendations on overcoming those barriers. This is an essential guide for primary care physicians, family physicians, pediatricians, internists, residents, medical students, mid-level providers, and learners for understanding vaccines and improving preventative care for their patients.

Breeding Oilseed Brassicas Kuldeep S. Labana,Surinder S. Banga,Shashi K. Banga,2013-11-09 The present status of rapeseed-mustard crops as the third most important source of edible oils is attributable to the success of plant breeders and associate researchers in developing high yielding varieties with improved quality and resistance to biotic and abiotic stresses. However, the need to maximize the production gains and quality at lower economic cost is greater than ever before. Breeding Oilseed Brassicas was thus conceived to review the past accomplishments in order to identify research gaps and suggest ways and means to meet the challenge of sustainable productivity upgradation. Theoretical and applied aspects of breeding, genetics, cytogenetics, crop physiology, and biotechnology are covered. The emphasis is on the application of theoretical knowledge to the solution of problems that confront the Brassica breeders.

Tools for Landscape-Scale Geobotany and Conservation Franco Pedrotti,Elgene Owen Box,2021-07-10 This book contains the papers presented at the conferences of the International Association Vegetation Science of Pirenopolis (2016) on Applied Mapping for Conservation and Management: from Plant and of Palermo (2017) on Vegetation Patterns in relation to multi-scale levels of ecological complexity: from associations to geoseries. The reports refer to general themes (semiological bases of mapping, dynamic-catenal mapping, nature conservation, plant biodiversity, biogeography, and geosynphytosociology) and their application to vegetation in different parts of the world (Andes of Bolivia, California, Kaga Coast in Japan, Southeastern USA, Morocco, Europe: Carpathians mountains, Swiss Alps, Sicily, Southern Portugal, Spain, and French Atlantic coastal). One of the benefits of the book is that it offers the possibility of comparing the different methodologies used in very different types of vegetation in the world (Boreal, Mediterranean, Tropical, Neotropical, etc.). The book is intended for researchers, Ph.D. students, and university professors.

Invasion Biology Jonathan M Jeschke,Tina Heger,2018-04-25 There are many hypotheses describing the interactions involved in biological invasions, but it is largely unknown whether they are backed up by empirical evidence. This book fills that gap by developing a tool for assessing research hypotheses and applying it to twelve invasion hypotheses, using the hierarchy-of-hypotheses (HoH) approach, and mapping the connections between theory and evidence. In Part 1, an overview chapter of invasion biology is followed by an introduction to the HoH approach and short chapters by science theorists and philosophers who comment on the approach. Part 2 outlines the invasion hypotheses and their interrelationships. These include biotic resistance and island susceptibility hypotheses, disturbance hypothesis, invasional meltdown hypothesis, enemy release hypothesis, evolution of increased competitive ability and shifting defence hypotheses, tens rule, phenotypic plasticity hypothesis, Darwin's naturalization and limiting similarity hypotheses and the propagule pressure hypothesis. Part 3 provides a synthesis and suggests future directions for invasion research.

A WORKING HOUSEWIFE SHALBHA SINGH,2020-03-07 In this book, the author has penned the life of her mother who in today's world may be considered as an ordinary housewife but in reality, played a very crucial role in bringing life to many other lives. The author has tried to depict the struggle of a woman what she goes through right from her childhood and continues by giving up her dreams for others which is not even acknowledged by anyone. The book also tries to throw light on the way a housewife conducted her life and enjoyed every moment being it. The book also shows however small the world is for a mother she enjoys every bit of it by loving her kids.

Savanna Woody Plants and Large Herbivores Peter Frank Scogings,Mahesh Sankaran,2019-09-30 Insights on current research and recent developments in understanding global savanna systems Increasingly recognized as synonymous with tropical grassy biomes, savannas are found in tropical and sub-tropical climates as well as warm, temperate regions of North America. Savanna Woody Plants and Large Herbivores examines the interactions between woody plants and browsing mammals in global savannas—focusing primarily on the C4 grassy ecosystems with woody components that constitute the majority of global savannas—and discusses contemporary savanna management models and applications. This much-needed addition to current research examines topics including the varying behavior of browsing mammals, the response to browsing by woody species, and the factors that inhibit forage intake. Contributions from an international team of active researchers and experts compare and contrast different savanna ecosystems, offering a global perspective on savanna functioning, the roles of soil and climate in resource availability and organism interaction, and the possible impacts of climate change across global savannas. Fills a gap in literature on savanna management issues, including biodiversity conservation and animal production Applies concepts developed in other biomes to future savanna research Complements contemporary books on savanna or large herbivore ecology Focuses on the woody component of savanna ecosystems and large herbivore interactions in savannas Compares tree-mammal systems of savannas and other eco-systems of temperate and boreal regions Provides numerous case studies of plant-mammal interactions from various savanna ecosystems Savanna Woody Plants and Large Herbivores is a valuable addition to those in fields such as ecology, wildlife and conservation biology, natural resource management, and environmental science.

The Cost of Environmental Degradation Lelia Croitoru,Maria Sarraf,2010-07-16 How much is a cleaner environment worth? For policy makers, that question used to go largely unanswered. Many economic activities cause environmental degradation, entailing real costs to the economy and to people's welfare. Knowing the extent of these costs is crucial for identifying a country's main environmental priorities and allocating appropriate funds for environmental protection. Over the past decade, the World Bank has initiated a systematic effort to measure the costs of environmental degradation in the Middle East and North Africa, shedding new light on their magnitude and on the need for policy changes. In many cases, these costs were found to be surprisingly large. 'The Cost of Environmental Degradation: Case Studies from the Middle East and North Africa' brings together the best case studies of this program and summarizes their policy impacts at the national and regional levels. The case studies quantify monetarily the annual damage due to environmental degradation and express these estimates as percentages of the countries' gross domestic product. The studies use the most recent environmental valuation methods to estimate the economic costs resulting from air pollution, water degradation, deforestation, and land degradation. Uniquely, the book dedicates a case study to value the costs of environmental degradation resulting from an oil spill and demolition waste in times of conflict. The studies then illuminate the concrete implications on policy, investments, and institutions for the respective nations. This book will be of interest to policy makers, nongovernmental organizations, and academic and research institutions.

The Ecosystem of Kongsfjorden, Svalbard Haakon Hop,Christian Wiencke,2019-06-19 This book focuses in detail on all ecologically important aspects of the Kongsfjorden system such as the marine and atmospheric environment including long-term monitoring, Ecophysiology of individual species, structure and function of the ecosystem, ecological processes and biological communities. The contributed articles include review articles and research articles that have a wider approach and bring the current research up-to-date. This book will form a baseline for future work.

Riverine Ecosystem Management Stefan Schmutz,Jan Sendzimir,2018-05-08 This open access book surveys the frontier of scientific river research and provides examples to guide management towards a sustainable future of riverine ecosystems. Principal structures and functions of the biogeosphere of rivers are explained; key threats are identified, and effective solutions for restoration and mitigation are provided. Rivers are among the most threatened ecosystems of the world. They increasingly suffer from pollution, water abstraction, river channelisation and damming. Fundamental knowledge of ecosystem structure and function is necessary to understand how human activities interfere with natural processes and which interventions are feasible to rectify this. Modern water legislation strives for sustainable water resource management and protection of important habitats and species. However, decision makers would benefit from more profound understanding of ecosystem degradation processes and of innovative methodologies and tools for efficient mitigation and restoration. The book provides best-practice examples of sustainable river management from on-site studies, European-wide analyses and case studies from other parts of the world. This book will be of interest to researchers in the field of aquatic ecology, river system functioning, conservation and restoration, to postgraduate students, to institutions involved in water management, and to water related industries.

Plant Conservation Sergei Volis,2019-03-07 This practical and bold book unifies multiple aspects of plant conservation into a single coherent concept, linking theory and methodology.

Plant Ecology Ernst-Detlef Schulze,Erwin Beck,Klaus Müller-Hohenstein,2005-02-18 This textbook covers Plant Ecology from the molecular to the global level. It covers the following areas in unprecedented breadth and depth: - Molecular ecophysiology (stress physiology: light, temperature, oxygen deficiency, drought, salt, heavy metals, xenobiotics and biotic stress factors) - Autecology (whole plant ecology: thermal balance, water, nutrient, carbon relations) - Ecosystem ecology (plants as part of ecosystems, element cycles, biodiversity) - Synecology (development of vegetation in time and space, interactions between vegetation and the abiotic and biotic environment) - Global aspects of plant ecology (global change, global biogeochemical cycles, land use, international conventions, socio-economic interactions) The book is carefully structured and well written: complex issues are elegantly presented and easily understandable. It contains more than 500 photographs and drawings, mostly in colour, illustrating the fascinating subject. The book is primarily aimed at graduate students of biology but will also be of interest to post-graduate students and researchers in botany, geosciences and landscape ecology. Further, it provides a sound basis for those dealing with agriculture, forestry, land use, and landscape management.

The Son of Dharma Shreya Chaudhary,2020-08-08 After surviving a near-fatal accident all Abhishek Singh (Abhi) wanted was an ordinary life. But that was made impossible when his best friend wanted to kill him, along with assassins, monsters, and demons. The son of Dharma follows the journey of a reluctant hero, who is dragged against his will and common sense into a century old war against the gods. He gets involved in a conspiracy surrounding the Mahabharata leading to a life on the run. Abhi barely escapes a horde of assassins when he realizes that the enemy is not one man but an entire organization with a century old grudge that has only grown deeper with time. And for reasons unknown it is after Abhi but our cynical hero wants nothing to do with the secrets and the lies when suddenly the choice is out of his control, he can either stand up and fight or die.

Evolution of Marine Coastal Ecosystems under the Pressure of Global Changes Hubert-Jean Ceccaldi,Yves Hénocque,Teruhisa Komatsu,Patrick Prouzet,Benoit Sautour,Jiro Yoshida,2021-06-16 Coastal and estuarine environments at the interface of terrestrial and marine areas are among the most productive in the world. However, since the beginning of the industrial era, these ecosystems have been subjected to strong anthropogenic pressures intensified from the second half of the 20th century, when there was a marked acceleration in the warming (climate change) of the continents, particularly at high latitudes. Coastal ecosystems are highly vulnerable to alteration of their physical, chemical and biological characteristics (marine intrusion, acidification of marine environments, changes in ecosystems, evolution and artificialization of the coastline, etc.).In contact with heavily populated areas, these environments are often the receptacle of a lot of chemical and biological pollution sources that significantly diminish their resilience. In this context of accelerated evolution and degradation of these areas important for food security of many populations around the world, it is necessary to better identify the factors of pressure and understand, at different scales of observation, their effects and impacts on the biodiversity and on the socio-eco-systems, in order to determine the degree of vulnerability of these coastal ecosystems and the risks they face. A transdisciplinary and integrated approach is required to prevent risks. Within this framework, operational coastal oceanography occupies an important place but also the implementation of a true socio-eco-system approach in order to set up an environmentally friendly development.

GODS OF THE COSMOS DR. SUDAKSHINA,2020-08-14 **GODS OF THE COSMOS** Who and where are they? When and why did they leave us? Do they know about our upcoming world wars and pandemics? Why don't they stop them? How and why are they helping us, even today? What are their wish and message? Ananth completes his IIT from Chennai and returns to his hometown, Srirangam. He is given an old map by his grandfather, and clues start falling in place on his trip to a historical ancient city. The adventure leads him to discover a five-thousand-year-old undeciphered manuscript from Dvapara Yuga. All this and much more directs Ananth and Siri to USA, White House and the First Lady. When we realize the wish and implement the message of Gods, our planet has a surprise in store. This book of fiction takes you into the secret realms of history, science and philosophy, unraveling reality.
