Evaluation Management in South Africa and Africa Fanie Cloete, 2014-12-01 This blind peer reviewed book systematically records, analyses and assesses for the first time in a single volume the implications of the global development and management of professional evaluation for the African continent. The book deals with the most strategic contemporary evaluation themes. Each of these themes contains discussions of theoretical issues illustrated with one or more short case studies, while selected longer case studies and other relevant documentation are also taken up in annexures at the end of the book. The book therefore comprises a guide to best M&E practices for purposes of systematic policy, programme and project evaluations. It is suitable for both professional M&E institutionalisation and capacity-building projects as well as for evaluation information dissemination and education at different levels in the public, private and voluntary sectors in society, especially in a developmental context.

Engineering and Managing Software Requirements Aybüke Aurum, Claes Wohlin, 2006-04-07 Requirements engineering is the process by which the requirements for software systems are gathered, analyzed, documented, and managed throughout their complete lifecycle. Traditionally it has been concerned with technical goals for, functions of, and constraints on software systems. Aurum and Wohlin, however, argue that it is no longer appropriate for software systems professionals to focus only on functional and non-functional aspects of the intended system and to somehow assume that organizational context and needs are outside their remit. Instead, they call for a broader perspective in order to gain a better understanding of the interdependencies between enterprise stakeholders, processes, and software systems, which would in turn give rise to more appropriate techniques and higher-quality systems. Following an introductory chapter that provides an exploration of key issues in requirements engineering, the book is organized in three parts. Part 1 presents surveys of state-of-the-art requirements engineering process research along with critical assessments of existing models, frameworks and techniques. Part 2 addresses key areas in requirements engineering, such as market-driven requirements engineering, goal modeling, requirements ambiguity, and others. Part 3 concludes the book with articles that present empirical evidence and experiences from practices in industrial projects. Its broader perspective gives this book its distinct appeal and makes it of interest to both researchers and practitioners, not only in software engineering but also in other disciplines such as business process engineering and management science.

Software Quality Assurance Ivan Mistrik,Richard M Soley,Nour Ali,John Grundy,Bedir Tekinerdogan,2015-10-12 Software Quality Assurance in Large Scale and Complex Software-intensive Systems presents novel and high-quality research related approaches that relate the quality of software architecture to system requirements, system architecture and enterprise-architecture, or software testing. Modern software has become complex and adaptable due to the emergence of globalization and new software technologies, devices and networks. These changes challenge both traditional software quality assurance techniques and software engineers to ensure software quality when building today (and tomorrow's) adaptive, context-sensitive, and highly diverse applications. This edited volume presents state of the art techniques, methodologies, tools, best practices and guidelines for software quality assurance and offers guidance for future software engineering research and practice. Each contributed chapter considers the practical application of the topic through case studies, experiments, empirical validation, or systematic comparisons with other approaches already in practice. Topics of interest include, but are not limited, to: quality attributes of system/software architectures; aligning enterprise, system, and software architecture from the point of view of total quality; design decisions and their influence on the quality of system/software architecture; methods and processes for evaluating architecture quality; quality assessment of legacy systems and third party applications; lessons learned and empirical validation of theories and frameworks on architectural quality; empirical validation and testing for assessing architecture quality. Focused on quality assurance at all levels of software design and development Covers domain-specific software quality assurance issues e.g. for cloud, mobile, security, context-sensitive, mash-up and autonomic systems Explains likely trade-offs from design decisions in the context of complex software system engineering and quality assurance Includes practical case studies of software quality assurance for complex, adaptive and context-critical systems

Small-Scale Public Transportable and Pre-Fabricated Buildings Junjie Xi,2018-04-09 This book investigates the design, operation and use of contemporary transportable buildings, and explores how functional performance can be assessed in small-scale examples for public use alongside their relationship to other design elements. The research focuses on three case studies, Chengdu Hualin Elementary School, Exxopolis and Kreod, that do not require a high-technology building environment or complex construction skills. Transportable buildings are defined as those that are transported in a number of parts for assembly on

site. Contemporary transportable buildings respond to ecological issues, social impacts, technological innovation and economic demands. They can be used to measure a society's development in environmental sustainability, innovation and economic growth through various forms. Small-scale transportable buildings fulfil many temporary habitation needs in diverse roles, such as non-emergency transitional housing, ephemeral exhibition buildings and seasonal entertainment facilities. *Small-Scale Public Transportable and Pre-Fabricated Buildings* will be a useful research text for academics and students in architecture, design and sustainable building performance.
