Aviation Information Management Barbara G. Kanki,2017-03-02 Operational information management is at a crossroads as it sheds the remaining vestiges of its paper-based processes and moves through the uncharted domain of electronic data processes. The final outcome is not yet in full focus, but real progress has been made in the transition to electronic documents providing the aviation industry with a clear direction. This book looks at a combination of industry initiatives and airline successes that point to the next steps that operators can take as they transition to fully integrated information management systems. Although the route has not been fully identified, it is evident that a key to successful long-term efficient information management is industry-wide cooperation. The chapters are authored by a range of experts in operational information management, and collectively, they outline ways that operators can improve efficiency

across flight, ground and maintenance operations. Considerations and recommendations are identified and presented addressing the following priorities: Safety-critical information and procedures Human factors Information security Operational information standardization. The readership includes: Airline flight operations managers and standards personnel, Airline operating documents and publication specialists, Airline information managers, Commercial pilots, Airline maintenance managers and personnel, Manufacturers and vendors of aviation products, Aviation regulators and policy makers, Aviation researchers and developers of information technologies, and Military technical publications specialists.

New International Dictionary of Acronyms in Library and Information Science and Related Fields Henryk Sawoniak, Maria Witt, 2011-05-02 This enlarged and expanded edition is designed to be a valuable resource for librarians and users of information sources, clarifying the bewildering number of new acronyms that appear every year in the information science field. Nearly 30,000 acronyms in 35 languages are listed. As libraries are to a large extent interdisciplinary, the dictionary covers language forms used in computers, publishing, printing, archive management, journalism and reprography, as well as in the library and information science fields Acronyms reproduced here represent institutions, library and information systems, pr.
